Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Tark Elgassier

This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sandy Levine

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.  

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.  

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.  

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.  

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.  

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.  

Sincerely,  

Richard Ramirez

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

David Ruzicka

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lawrence Levy

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Rachel Abdel

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Eric Jorgensen

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Nancy Lyon

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Bruce Cowan

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kira Schabram

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Edith Drobny

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mitzy Esteva-Grillet

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

A Adams

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Robert Foran

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Zoe Huang

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Maureen Cole

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Tadd Armbruster

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Michael McMahan

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Gail Horvath

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Allison Levin

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Patty Ebel

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Charles Wiley

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Charles Lieou

Dear Commissioners Douglas and McAllister,  

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.  

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.  

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.  

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.  

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.  

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.  

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.  

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.  

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.  

Sincerely,  

Seb Baum

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Joel Isaacson

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mary Pritchett

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Christina Chen

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Janet Dunlap

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Tammy Glazkov

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Keith Fahey

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Raziel Kainne

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Frederick Bialy

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Maile Chock

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jonathan Lee

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Helen Martin

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

John Price

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ron Parsons

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Pucci Dellanno

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Richard Baumgartner

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Kathleen Kent
PO Box 3557

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Suzan Clausen

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Katie Stewart

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Rebecca Marsico

Sacramento, CA 95814-5512  

Dear Commissioners Douglas and McAllister,  

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.  

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.  

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.  

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.  

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.  

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.  

Sincerely,  

Barbara Fukumoto

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Wendy Meidt

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Carlos Navarrette

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mary L. Sanchez

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Victor Monjaras

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Bronwyn Olsen

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mary Lou Copp

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jennifer Kim Zeller

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Lillian Mejia

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sam Romero

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

James Merrin

We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jerome Smith

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Sandra Glover

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Esther Wilson-Arias

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Hector Gonzalez

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

William W. Ellinger III

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Brebda Mouw

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Steven Ganter

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Fabian Acuna

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mario Acevedo

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Brenda Howell

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Jolene Yates

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Hal Young

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

1516 Ninth Street, MS-29  
Sacramento, CA 95814-5512  

Dear Commissioners Douglas and McAllister,  

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.  

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.  

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.  

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.  

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.  

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.  

Sincerely,  

Janessa Caldwell  
2501 E 21st St Apt 301  
Signal Hill, CA 90755-6032
Dear Commissioners Douglas and McAllister,

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dolly Daswani

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Stanley Boren

Dear Commissioners Douglas and McAllister,  

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.  

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.  

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.  

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.  

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.  

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.  

Sincerely,

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Eileen Pritzker

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Ray Bustos

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Edda Spielmann

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Christian Sautter

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Iris Shearer

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Paul Boutin

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Helen Rogers

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Donna Hunt

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Andrew Raymond

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Juan Balboa

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. Sacramento, CA 95814-5512  

Dear Commissioners Douglas and McAllister,  

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County. 

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort. 

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant. 

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region. 

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come. 

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal. 

Sincerely, 

Warren Parks

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Mary and Thomas Reed

Sacramento, CA 95814-5512

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Linda Jean Edwards

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

Elliot Safdie

That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.

Coal has no place in California’s energy mix. We have cleaner, safer, more cost-effective alternatives. We strongly urge you to reject this dangerous proposal.

Sincerely,

William Higbee

Dear Commissioners Douglas and McAllister,

We write to express our concerns with the proposed Hydrogen Energy California project being considered for development in Kern County.

California has made considerable strides to eliminate dirty coal from its energy portfolio. We cannot move backwards in this important effort.

From the mine to the smokestack to the waste left behind, coal is irrevocably dirty. This project would rail coal from New Mexico, through California and then possibly rely on dirty trucks to ship the coal from the rail depot to the plant. While the project alleges to be “clean,” it would emit unsafe levels of pollution, including pollutants that cause smog. Kern County already has the dirtiest air in the nation. We simply cannot afford any more pollution, especially from a coal plant.

In addition to the dirty air and problems from coal, the project proposes to use an unacceptable amount of water. As currently planned, the project would consume upwards of 7,500 acre feet of water every year. That’s water currently used by pistachio and almond farmers in the region, and water we can’t afford to spare given our changing climate and the extreme drought facing our region.

Lastly, the project cannot mitigate for the tons of waste (100 truckloads a day!) this project will create. This threatens to put the county out of compliance with our waste diversion rules and risks putting the county on the hook for huge and costly penalties in the years to come.
