Docketed Date:	4/1/2015

Comment Received From: Evan Gillespie

Submitted On: 3/31/2015

Docket Number: 08-AFC-08A

Comments in Support of Motion to Terminate

Attached are the names of 6,982 Californians, who together submit the following comment in support of Sierra Club and other intervenor's motion to terminate this proceeding.

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Additional submitted attachment is included below.

You have got to be kidding me CEC!! I am a Kern County resident also living in Lake Isabella 50 miles east of Bakersfield every time the winds come up from the southwest it blows the dirty air from Bakersfield up here and I am sick of the pollution. With the nations dirtiest air I cant even believe a coal-fired powerplant is even being thought of. So I say dont build this stupid plant,we need to clean the air in the Central Valley. Go solar

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Donna Meyers

I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Coal is the past, our future is with wind and solar. The production of coal from wherever it is mined is a horrible and outdated process. It ruins the soils and water for miles in every direction. Then to think of burning it in California? What is wrong with you people anyway? Don't think that the few dozen jobs this will create will make up for the loss of clean air, water and potential loss of jobs in the agriculture sector, not to mention the disgusting pollution that occurs on the earth for miles around those tall stacks. Scrubbers remove a lot of stuff, but those heavy metals in coal just build up over time in the area. Please, especially since the developer is not following up with appropriate due diligence, terminate this review.

Sincerely,
Judith Mason

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Clover Catskill

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Lynne Weiske

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
John McDonald

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Ernest Pacheco

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Linda Lyerly

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Kristofer Young

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Michael Ross

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Todd Fisk

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Margaret Copi

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Edwin Tomyoy

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
David & Jean Struthers

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Sally McElravey

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Peter Kirsheman

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Jake Gutman

My state used to be the forth largest economy in the WOLRD, and now we have a massive break down in where our water should go. I feel that someone is getting one helleva kick back on letting this company Not only use our water, but also ruin what good air is left, and lose our farms. What could you be thinking! If its not for the money, which I feel is a waste considering all the renewable energy we have been nurturing, then I want to know why. I will not only put my name on this petition, but will use my vote to tell you how I feel come next election. Save our state!

Sincerely,
Robin Gulling

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Andree Kasche

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future

This project should not be allowed to proceed. It will not only add large amounts of pollutants to the air, causing damage to the health problems to the public in the area. California must develop solar and wind generating facilities throughout the state. All buildings being built now should be required to have roof top solar, which would help cut down the demand for additional power plants. .

Sincerely,
Gene & Sharon Waggoner
