RE: AQ-SC3, AQ-SC4, AQ-SC5, and WORKER SAFETY-8 Monitoring and Mitigation Activities at Mojave Solar Project (09-AFC-5C) for September 1 through September 30, 2013

Dear Mr. Rundquist:

This letter is to update you on the air quality construction monitoring occurring at the Mojave Solar Project (MSP) site during September 2013. Compliance with the WORKER SAFETY-8 condition was also monitored. Construction activities occurred September 1 through 30, 2013. Compliance monitoring was performed by Jose Manuel Bravo Romero of Abengoa; who is the full-time onsite Air Quality Construction Mitigation Manager (AQCMM). I, Christopher Waller of CH2M HILL, am the designated AQCMM delegate and visited the site on September 30, 2013, to ensure compliance with record keeping and conditional requirements.

Overview

Construction activities in September included heat transfer fluid (HTF) pipe installation, steam generator assembly, power block foundation and structure construction, underground tunnel gatehouse construction, paving of Harper Lake Road at the underground tunnels, excavation and construction of various drainage structures, trenching for electrical cable installation for evaporation ponds, parabolic trough collector (PTC) assembly, steam turbine generator (STG) foundation construction, expansion vessel assembly, duct bank excavation and construction, level III box installation, barrier fence grounding rod installation, and tortoise fence installation. Construction was monitored for compliance with Conditions of Certification (COCs) AQ-SC3, AQ-SC4, AQ-SC5, and WORKER SAFETY-8. New equipment brought onsite during September was issued a tag in accordance with AQ-SC5a, and evaluated for compliance with AQ-SC5b through AQ-SC5d. A summary of the compliance with the Air Quality Construction Mitigation Plan (AQCMP) is provided in the following sections. Daily, weekly, and monthly observation logs and other site inspection forms are maintained onsite and available upon request.

Compliance Assessment

AQ-SC3 – Fugitive Dust Control

All of the AQ-SC3 COCs were in effect during September 2013. The following section summarizes each COC and describes the level of compliance.

- AQ-SC3a: Soil stabilizers on main access roads and delivery areas
Soil stabilizers have been applied to finished access roads and delivery areas. Main roads in Beta have been paved.
- AQ-SC3b: Watering of disturbed areas
Watering of actively disturbed areas was performed for all construction activities with the potential to create airborne dust plumes. When necessary, watering was intensified as directed by the onsite AQCM and construction managers.
- AQ-SC3c: Speed limits
The required speed limits have been enforced onsite.
- AQ-SC3d: Speed limit signage
Speed limit signage has been posted and is clearly visible at all site entrances.
- AQ-SC3e: Tire inspection and washing prior to exiting to paved roadway
Although tire washing stations have not been installed, all construction vehicles are inspected for dirt and other debris prior to exiting to paved public roadways.
- AQ-SC3f: Tire washing station
As stated above, no tire washing stations have been installed. However, tires of construction vehicles are inspected for dirt and other debris prior to exiting to paved public roadways.
- AQ-SC3g: Unpaved exit treatment
Rumble plates are installed at all site exits.
- AQ-SC3h: Construction vehicles use approved entrances only
When traveling between sites, construction vehicles use approved entrances only.
- AQ-SC3i: Run-off onto public roadways
Earthmoving activities have resulted in run-off being directed away from paved public roadways. In addition, fiber rolls have been placed where the potential for run-off onto public roadways exist. Watering has not resulted in run-off onto public roadways.
- AQ-SC3j: Sweeping of paved roads within construction site
Sweeping of paved roads within the site is performed as necessary.

- AQ-SC3k: Sweeping of public paved roadways with access to the MSP site
Sweeping of Harper Lake Road is performed as necessary. In addition, soil stabilizers were applied to Harper Lake Road north of Lockhart Road and Lockhart Road west of Harper Lake Road.
- AQ-SC3l: Stabilization of storage piles
Significant earthmoving activities performed during September 2013 included excavation for various foundations within Alpha and Beta. Areas disturbed during foundation excavation were sufficiently watered during all construction activities. Additional storage piles exist to the east of the Alpha evaporation pond. These storage piles are watered frequently, and will be re-distributed at a later date. All other soil piles are temporary excavation spoils or grading excesses that are re-distributed prior to exceeding the 10-day limit for cover or treatment.
- AQ-SC3m: Stabilization of transported solid bulk material
Transported solid bulk materials are sufficiently watered, and at least one foot of freeboard is provided during transportation.
- AQ-SC3n: Wind control techniques
Wind fencing has been installed in Alpha East, Alpha West, and Beta along the eastern and western borders of each area.

AQ-SC4 – Dust Plumes & WORKER SAFETY-8 – Site Worker Fugitive Dust Protection

The following construction activities were performed during the September 1 through September 30, 2013, reporting period:

- HTF pipe and hose installation and welding
- Foundation and structure construction within the power blocks
- Excavation and construction of various foundations within Alpha and Beta
- Electrical, administration, and control building construction and installation
- Steam turbine and condenser assembly
- Excavation and construction of various drainage structures (oil/water sumps, manholes, etc.)
- Steam generator assembly
- Lube oil skid construction
- Underground tunnel gate house construction
- Paving of Harper Lake Road at the underground tunnels
- PTC assembly and installation
- Trenching for electrical cable installation for evaporation ponds
- Trenching, pouring concrete, installing conduit pipes, and backfilling of duct banks
- Level III box installation
- Fire protection system slab construction
- Tortoise fence installation
- Barrier fence grounding rod installation

Certain construction activities were suspended due to high wind conditions on one occasion in September 2013. During the stoppage, work within buildings and small miscellaneous outdoor construction activities continued. The following table summarizes the high wind event and the construction activities stopped during the event.

Table 1
Construction Activity Stoppages due to High Wind Conditions

Date	Time	Description of Construction Activity Stoppage	Maximum Recorded Wind Speed (mph)
09/26/2013	12:15	Large cranes in the power blocks were stopped.	24

Soil stabilization has been implemented on finished haul roads and delivery areas. In addition, main roads in Beta have been paved. Unfinished areas and haul roads without soil stabilizers are watered daily to mitigate against the formation of fugitive dust. A truck washing station has not been installed. However, rumble plates are installed at all site entrances/exits, and the tires of construction vehicles are inspected for dirt and other debris and swept clean as needed prior to exiting the site onto paved roadways.

AQ-SC5 – Diesel-Fueled Engine Control

A list of equipment operated onsite during September 2013 is attached to this letter. The list contains equipment information including manufacturer, model, California Air Resources Board (CARB) Equipment Identification Number (EIN), engine model year, engine horsepower, and U.S. Environmental Protection Agency (USEPA) certified tier level.

The following list summarizes each COC for AQ-SC5 and describes the level of compliance.

- **AQ-SC5a: Equipment Tags**

A visible air quality tag with a unique number (AQ #) was issued and adhered to all equipment that arrived onsite between September 1 and September 30, 2013.

- **AQ-SC5b: USEPA Engine Tier Requirement**

All construction equipment that arrived onsite between September 1 and September 30, 2013 had Tier 3 engines, except for 4 pieces of equipment. The exceptions and corrective actions taken are described in the list below.

- A John Deere backhoe (AQ #453) with a Tier 2 engine arrived onsite on September 10. The backhoe was removed from the site on September 17, and it will not be brought onsite in the future.
- A Sky-Trak lift (AQ #455) with a Tier 2 engine arrived onsite on September 13. The subcontractor who operates the lift is currently working with the equipment rental company to obtain a good faith effort (GFE) letter for the lift. If a GFE letter cannot be obtained, the lift will be taken offsite immediately.

- o A Snorkel lift (AQ #456) with a Tier 2 engine arrived onsite on September 13. The lift was removed from the site on September 17, and it will not be brought onsite in the future.
- o A Sky-Trak forklift (AQ #462) with a Tier 2 engine arrived onsite on September 19. The subcontractor who operates the forklift is currently working with the equipment rental company to obtain a GFE letter for the forklift. If a GFE letter cannot be obtained, the lift will be taken offsite immediately.
- AQ-SC5c: Retrofit Control Termination
No equipment with retrofit control technology was brought onsite.
- AQ-SC5d: Maintenance Records
Maintenance records for all vehicles are available upon request.
- AQ-SC5e: "All diesel heavy construction equipment shall not idle for more than five minutes."
Idle time was monitored by the activity managers and AQCMM. This condition was met during this reporting period.
- AQ-SC5f: Electric motors
The use of construction equipment with electric motors was not feasible for current construction activities.

1.0 Introduction

Per the California Energy Commission's (CEC) Abengoa Mojave Solar Project Commission Decision, CEC-800-2010-008-CMF, Docket Number 09-AFC-5, the following monthly compliance report (MCR) summarizes compliance with biological resource protection requirements during construction activities from September 1 through September 30 on the Mojave Solar Project (MSP) in San Bernardino County, California (see Figure 1).

This report does not repeat information provided in previous MCRs and assumes environmental compliance was met unless otherwise noted.

As outlined in the CEC Project Decision, the following biological conditions of certification (COC) pertaining to monitoring activity covered by this MCR include but are not limited to:

- BIO-2 Designated Biologist Duties
- BIO-3 Biological Monitor Selection, Qualifications and Duties
- BIO-4 Designated Biologist and Biological Monitor Authority
- BIO-5 Worker Environmental Awareness Program (WEAP)
- BIO-6 Biological Resources Mitigation Implementation and Monitoring Plan (BRMIMP) Development and Compliance
- BIO-7 Impact Avoidance and Minimization Measures
- BIO-11 Desert Tortoise (*Gopherus agassizii*) Exclusion Fencing, Clearance Surveys, and Translocation Plan
- BIO-14 American Badger (*Taxidea taxus*) and Desert Kit Fox (*Vulpes macrotis*) Impact Avoidance and Minimization Measures
- BIO-18 Common Raven (*Corvus corax*) Monitoring, Management, and Control

This MCR was also provided to California Department of Fish and Wildlife (CDFW) and United States Fish and Wildlife Service (USFWS).

1.1 Status of Biological Staff

Attachment 1 provides a summary table of the biological staff submitted for approval on this project and the status of their agency approvals.

The three individuals submitted as biological monitors in August were approved in September. In September, no new additional biological monitors were submitted to the agencies for approval.

2.0 Ongoing Construction Monitoring

The following section summarizes biological monitoring activities conducted by CH2M HILL throughout September 2013.

Please refer to sections "Desert Tortoise," "Invasive Weed Species," "Kit Fox and Other Mammals," "Nesting Birds," "Raven Monitoring, Management, and Control," "Wildlife Injury and Mortalities," and "Other Species" for specific information about wildlife and plants found by biological monitors in September.

The MSP requires that all onsite staff receive the WEAP training (via DVD) and a brochure prior to start of work. A total of 206 new staff went through WEAP training in September. A new WEAP administrator did not require attendees to sign the training log on September 16, 17, 18, 19, 23 and 24. The MSP attempted to get signatures from new staff who were scheduled on those dates; however, they were not able to locate all the people and the total new staff may be an under-representation of those that received the WEAP training. Attachment 2 provides an ongoing summary table of the project's WEAP attendance and the hard copy sign-in training logs available for September 2013.

On a typical weekday, one biological monitor or designated biologist:

- Monitors Harper Dry Lake Road at least every 3 hours during the desert tortoise active period (September through October);
- Monitors active construction areas, parking lots, laydown yards, and any areas of potential threat to vegetation, soils, or wildlife;
- Inspects desert tortoise exclusion fences and tortoise guards as required;
- Inspects potential entrapment areas (e.g., trenches);
- Monitors for formation of potential standing water;
- Inspects kit fox exclusion buffers and downloads motion-sensor cameras at shelter sites;
- Conducts raven observations and point count surveys;
- Reports hazardous waste spills to the designated biologist;
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches from the ground surface; and
- Performs other special biological-resources-related activities as required.

2.1 Construction Activities

In September, construction activities occurred in all project sectors with the highest concentration in the Alpha and Beta power block areas. In Alpha East, ground disturbance included various foundations, drainage excavations, duct bank trenching, and trenching around the evaporation ponds. In Alpha West, solar field electrical trenching was monitored. In Beta East, disturbance included duct banks, electrical trenching, various foundations, and drainage excavations. In Beta West, ground disturbance included solar electrical trenching and trenching around the evaporation ponds. Additionally, systematic trash removal by sector was accelerated during the month and maintenance of desert tortoise fence occurred on an as-needed basis.

The Beta 3 well discharge testing phase began on September 6 and failed. Testing began again on September 18 and passed. Complying with measures provided on March 22,

2013, by the former Designated Biologist, David Charlton, a biological monitor was present during the initiation of the tests. Discharge into the Harper Lake wetland was monitored daily throughout the test period with no special-status species observed. On September 20, the discharge pipe was raised by construction staff under the supervision of biological staff. It was returned to its prior position on September 23 after testing was complete.

Installation of the permanent desert tortoise exclusionary fence continued in September along the north boundaries of Beta East, Alpha West, and Alpha East. Installation was completed along the northern fence of Alpha East. The original fencing around Alpha East has yet to be removed. Installation of desert tortoise fence is considered fence maintenance because it is installed concurrently with the security/personnel fence and within the existing desert tortoise fence to the extent possible. More information on the biological monitoring of this activity is provided in the "Desert Tortoise" section below.

2.1.1 Desert Tortoise Exclusion Fence Repairs

In September, biological staff made comprehensive weekly inspections of the perimeter desert tortoise exclusion fence, which is more frequent than the monthly fence inspections required by BIO-11 and the Biological Opinion.

Two minor fence repairs were required in September. On September 12, biological staff discovered a hole dug by a survey crew not affiliated with MSP that compromised the integrity of the MSP exclusion desert tortoise fence. The contractor was notified and the hole was backfilled. Additionally, on September 24, biological staff observed a small hole dug under the exclusion fence (likely by an animal) on the northern fence line of Alpha North-East: the hole was backfilled.

2.2 Rain Events

Three rain events occurred this month: September 3, 5, and 9. All fences were checked for damage the following day. After the rain events on September 3 and 5, approximately 1 to 2 inches of standing water was observed in each of the Alpha and Beta evaporation ponds. Construction crews checked the evaporation ponds each morning and pushed around the water with brooms to increase evaporation rates. Within 3 days, the water in the ponds had completely evaporated. However, after the rain event on September 9, significantly more water had collected in the evaporation ponds. Construction staff hired a pump crew to remove the water over a 4-day period.

On September 12, the designated biologist sent an email to the CEC regarding the actions being taken by biological staff in the event of rain water collecting in the evaporation ponds. In the event of standing rain water, the ponds will be monitored several times a day by biological staff and any use or activity by bird life will be recorded. The project owner is actively pursuing implementing bird deterrents during construction phase, which are required during operations by the Evaporation Pond Monitoring and Adaptive Management Plan (COC BIO-19).

2.3 Hazardous Material Spills

One hazardous material incident occurred on September 12 and was reported to biological staff. An ice delivery truck hit a concrete pylon just northeast of the Alpha power block construction trailers and the force was enough to raise the engine up onto the pylon, which resulted in oil and radiator fluid leaking onto the ground. The biological monitor alerted health and safety personnel who executed proper clean-up and disposal.

2.4 Non-compliance Notifications or Reports

2.4.1 Non-compliance Report

A non-compliance report (NCR)—NCR 2—was issued to MSP on September 6. Based on CEC staff biologists' suggested revisions, a revised version of the NCR was submitted to the CEC on September 19. The NCR pertains to COC BIO-7 Measure 8, which states:

“Parking and storage shall occur within desert tortoise exclusion fencing to the extent feasible. No vehicles or construction equipment parked outside the fenced area shall be moved prior to an inspection of the ground beneath the vehicle for the presence of desert tortoise.”

In addition to the BIO-7 requirements, the CEC provided guidance, as reiterated in a September 4 email, that multiple violations of the same non-compliance require a non-compliance report. This NCR also follows this CEC guidance. Biological staff voiced concerns in daily safety meetings with activity managers that vehicles continued to be parked offsite and moved without confirmation of inspection for desert tortoises underneath vehicle.

2.4.2 Non-compliance Report Resolution

On September 20, Abengoa submitted an NCR Resolution to the CEC. The resolution stated that Abeinsa EPC (AEPC) would ensure compliance to BIO-7 Measure 8 with additional measures including: (1) when observed, unattended vehicles parked offsite would have a biological notice attached that would require both clarification of why the vehicle is located offsite and notification to the biologist prior to being moved, (2) prior to moving, the activity manager is required to observe and document the inspection for tortoises underneath the vehicle, and (3) all documentation would be retained and made available for review.

On September 30, CEC staff biologist Ann Crisp called MSP providing a verbal acceptance of the NCR Resolution.

Between September 6 and September 30, MSP has not yet implemented the NCR resolution of providing a biological notice or documentation of inspection. AEPC is in the process of preparing a biological notice to be used. Biological staff continue to record unattended vehicles parked outside of the desert tortoise fence. When requested by operators, biological staff have cleared vehicles prior to moving.

2.5 Trash

In high activity areas, proper trash disposal is an ongoing concern. Loose trash accumulates on the east side of Alpha East and Beta East during high wind events, an increasing concern during September. Systematic removal of trash by the housekeeping crew has led to improvement along the fence lines, roads, and other areas where it is concentrated by wind. Housekeeping crews increased their effort to keep the TAB area clean as trailer disassembly and other efforts in the reduction of work in that area continue. Biological staff reminded MSP that BIO-7 requires trash receptacles with self-closing lids and asked them to pay particular attention to sources of food waste. Construction staff is considering increasing the number of trash receptacles with lids in high traffic areas to eliminate overflow of trash and prevent ad hoc use of open containers. Activity managers have been reminded to ask their crews to dispose of trash in appropriate containers.

3.0 Special-status Species Monitoring and Other Surveys

3.1 Desert Tortoise

In September, no construction activities required desert tortoise clearance surveys. The new desert tortoise fence installation is considered maintenance of existing fence. The trenches were previously dug and backfilled; therefore, no new vegetation was disturbed outside of the fence line. Biological monitors escorted construction crews out to the fence replacement in the morning and intermittently inspected desert tortoise fence installation and access routes throughout the day. No sensitive species were observed during fence installation in September.

No desert tortoises were observed on the project site or any access road to the project in September.

3.2 Invasive Weeds

Russian thistle (*Salvica tragus*) was observed onsite in September. Russian thistle has a California Invasive Plant Council (Cal-IPC) moderate invasive rating. The MSP is on schedule to contract Brutoco Engineering and Construction Company to serve as the California licensed herbicide applicator in October.

3.3 Kit Fox and Other Mammals

A new shelter site was discovered in Alpha West by biological staff on September 9 and is named DKF Site #4 (Figure 2). DKF Site #4 was within the 250-foot buffer of DKF Site #3, so the buffer was expanded to include both sites. The four active DKF sites are as follows: DKF Site #1 in the southwest irrigation pipe location in Alpha East, DKF Site #2 in the trench pipe between mirror rows 126 and 127 in Alpha East, DKF Site #3 adjacent to mirror row 68 in Alpha West, and DKF Site #4 in row 72 also in Alpha West. Because MSP only has two motion sensor cameras, biological staff removed the camera from DKF Site #3

to place at the new DKF Site #4 location on September 10. The other camera is located at DKF Site #2. Biological staff assumes that DKF Sites #1 and #3 remain active.

Activity levels at the kit fox shelter sites monitored by cameras were variable throughout the month. Almost all activity was characterized by a visit of a single adult kit fox, usually in the morning or evening. DKF Site #4 recorded several observations of two adult kit foxes in September. No pups were observed in September.

The motion sensor camera at DKF Site #2 showed consistent activity through most of the month; however, there were periods of inactivity on September 1 and 2 in addition to a period between September 13 and 16. DKF Site #3 showed very little activity from September 1 through 10, until the camera was moved to DKF Site #4. DKF Site #4 showed consistent activity with periods of inactivity on September 15, 16, 19, and 29. Two adult kit foxes were observed by motion sensor cameras on September 14, 17, 18, 27, and 28. There was only one incidental kit fox observation by MSP staff during the month (Figure 2).

On September 4, 12, and 17, biological staff monitored construction crews working within the 250-foot exclusion buffer at DKF Site #2. On September 9 through 11, biological staff monitored construction crews working within the 250-foot exclusion buffer at DKF Sites #3 and #4. Prior to all work within the buffer, construction crews signed a protocol verifying their understanding of correct procedure within the exclusion buffer. Additionally, all construction crews were verbally briefed before entering the buffer. Prior to work within the buffer, biological staff checked the motion sensor camera to confirm whether the kit fox was within the shelter site. In addition, MSP construction staff was not allowed to block either end of the trench to ensure that the kit fox would have protected egress.

Biological staff inspected the integrity of the exclusion buffers throughout the week and downloaded motion sensor cameras. MSP also provides a kit fox activity summary to CEC twice a month.

3.4 Nesting Birds

No active nests or nesting behavior by birds were observed on MSP in September.

Breeding season surveys for nesting raven ended in June and, therefore, were not required in September.

3.5 Raven Monitoring, Management, and Control

The format and results of the BIO-18 September monitoring has been revised per CEC comments on the May Biological Resources Monthly Compliance Report emailed June 20, 2013, and phone conversation with Ann Crisp on September 5, 2013.

Common raven monitoring activities continued on the MSP site per BIO-18 and as outlined in the *Common Raven Monitoring, Management and Control Plan* (Plan). The September Monthly Common Raven Monitoring Results provides information on monitoring activities, survey methods, maps, incidental raven observations, point count survey results and datasheets (Attachment 3).

3.6 Wildlife Injuries and Mortalities

There were no wildlife injuries or mortalities on MSP in September.

MSP has not yet received the results of the Cooper's hawk necropsy reported in the August MCR.

3.7 Other Species

A list of observed wildlife species is included in Attachment 4. Two sensitive species, loggerhead shrike (*Lanius ludovicianus*) and LeConte's thrasher (*Toxostoma lecontei*) were each observed several times on, or just outside, the MSP perimeter fence. Both species are CDFW Species of Concern.

On August 29, a swarm of bees was reported in Beta West and continued to occupy this location until early September. MSP determined this was a health and safety issue and biological staff were not involved with the resolution.

MSP was issued a 6-month USFWS *Migratory Bird Special Purpose Utility Salvage Permit – Solar* that authorizes project staff to collect, transport, and possess carcasses of species protected by the Migratory Bird Treaty Act. This temporary permit expires March 16, 2014.

Introduction

The Abengoa Mojave Solar Project (MSP) is required to provide a monthly report on common ravens (*Corvus corax*) to the California Energy Commission (CEC), United States Fish and Wildlife Service (USFWS), and California Department of Fish and Wildlife (CDFW). The CEC Final Decision includes Condition of Certification (COC) BIO-18 stating that the project owner shall implement control measures to manage its construction site and related facilities in a manner to control raven populations and to mitigate cumulative and indirect impacts to desert tortoise associated with regional increase in raven numbers. In accordance with BIO-18, the CEC approved the Common Raven Monitoring, Management, and Control Plan (the Plan) on March 26, 2012. Refer to BIO-18 and the Plan for monitoring and survey protocol description.

Construction Monitoring Activities

The following section summarizes biological monitoring activities conducted by CH2M HILL throughout September 2013.

On a typical weekday, one biological monitor or designated biologist:

- Monitors Harper Dry Lake Road at least every 3 hours during the desert tortoise active period (September through October);
- Monitors active construction areas, parking lots, laydown yards and any areas of potential threat to vegetation, soils, or wildlife;
- Inspects desert tortoise exclusion fences and tortoise guards as required;
- Inspects potential entrapment areas, e.g., trenches;
- Monitors for formation of potential standing water;
- Inspects kit fox exclusion buffers and downloaded motion-sensor cameras at shelter sites;
- Conducts raven observations and bi-weekly point counts;
- Reports hazardous waste spills to the designated biologist;
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches from the ground surface; and
- Performs other special biological activities as required.

Methods

The designated biologist ensures that the biological monitors are trained to implement the Plan in both raven monitoring and management measures. During biweekly reconnaissance surveys of MSP, biological staff also conduct 10-minute stationary point counts at 7 locations (Supplement 1). The purpose of the point counts is to record raven observations including date, time, location, number of individuals, age, behavior, distance

from the station location, and any other pertinent notes (e.g., nesting behavior). This information is recorded on a hard copy datasheet. Point counts are conducted with a minimum of one week between.

Point counts were positioned to monitor project-specific activities and features that have potential to attract or subsidize ravens. The Plan defines six “conditions of concern” as:

1. Availability of water from evaporation ponds;
2. Potential creation of new perching/roosting/nesting sites for ravens;
3. Temporary water ponding potential from dust suppression associated with construction, operation, and maintenance;
4. Raven food sources from soil disturbance (rodents, insects, etc.) and road kill associated with construction activity;
5. Human food and waste management; and
6. Landscaping that could provide foraging, perching, and available water opportunities.

During daily monitoring activities, biological staff records incidental observations of ravens interacting with MSP. This includes any raven observation within site boundaries, flying overhead, or adjacent to the site. These observations are recorded in field notebooks and include date, general site location, global positioning satellite (GPS) location, number of individuals, and activity. The GPS information is also presented on a map.

The incidental observations are also used to identify potential problem areas. Problem areas are those requiring management actions. If a problem area is identified, the surveys will be increased to a weekly basis until the issue is resolved. Habitual perching sites will be identified and actions taken to discourage use. If hazing techniques are employed to discourage raven use, biologists will record information on date, time, location, habitat, number of individuals, and response to hazing. Potential or active raven nests will be documented and removed according to Plan specifications. Biological staff will report on whether control measures are working and provide further recommendations in the biological monthly compliance report.

Results

Incidental Observations

In September, no raven nests, nesting behavior, or raven “problem areas” were observed within the project boundaries.

During biological monitoring, 138 ravens were incidentally observed during 81 separate observations (Table 1). Because ravens are indistinguishable from one another, multiple sightings of individual birds likely occur. Therefore, the number of observations does not reflect the number of individual birds onsite. Common ravens were observed throughout the site, with many occurrences near Lockhart Road and the channel south of Alpha East and West (Supplement 2). The most common raven behavior observed was flying overhead. Ravens were also observed perched on fences and various transmission line

poles, but were not habitually using a perch location. Ravens were observed walking on the ground in the Alpha East power block vicinity.

Point Counts

In September, two biweekly point counts were conducted according to Plan protocol. Point counts were conducted on September 12 and September 25, 2013, by Joey Verge (JRV). Two ravens were observed at Station #1 on September 12 and two ravens were observed at Station #2 on September 25. Point count observations did not document any nesting

behavior or problem areas. The Common Raven Fixed Point Observation Data Sheets are provided in Supplement 3.

Table 2 provides a summary of point count observations.

Nest Monitoring

According to the Plan, biweekly breeding raven nest surveys ended in June, and were therefore not conducted in September.

**Subject: Abengoa Mojave Solar Project (09-AFC-5C)
Monthly Compliance Report CUL-1 and CUL-6**

Dear Mr. Rundquist:

CH2M HILL is assisting Abengoa Solar Inc. (Abengoa) in complying with California Energy Commission (CEC) Conditions of Certification, specifically, CUL-1 and CUL-6, for cultural resource monitoring, as set forth in the Commission Decision for the Mojave Solar Project (MSP). This report covers the cultural resources monitoring conducted from September 1, 2013 through September 30, 2013 by CH2M HILL.

Personnel Active in Cultural Monitoring This Period

The Cultural Resources Monitors (CRMs) included: Kurt Lambert, Sonia Sifuentes, Mike DeGiovine, Daniel Ewers, Gabriel Kitchen, and Jesse Shelmire. The Native American Monitors (NAMs) included: Howie Diaz, Tommy Herrera, Rebecca Brierty, Vanessa Brierty, Joseph Lente, Leona Galvin, and David Perezchica. Additionally, Cultural Resource Specialist, Gloriella Cardenas, was onsite.

Monitoring and Associated Activities This Period

Ground-disturbing activities subject to cultural resource monitoring occurred in various locations of the MSP. In Alpha East, duct bank trenching, manhole vaults, foundations, oil/water sump pump, bore holes for grounding rods (a spot check activity), and drainage excavations were monitored. In Alpha West, foundation excavations were monitored. In Beta East, ground disturbances subject to monitoring included: solar field grounding, duct bank trenching, foundation and manhole vault excavation, and electrical trenching. Electrical trenching and foundation excavations were monitored in Beta West.

Cultural Resources Discoveries This Period

MSP-CH-IF-05 was discovered during this reporting period.

Photo 1. MSP-CH-IF-05

MSP-CH-IF-05, a tertiary flake of chert material, was newly discovered at MSP on September 27, 2013. The isolate is a prescribed treatment artifact.

MSP-CH-IF-05 was found in Alpha East during spoils check of bore holes, located between mirror rows E115 and E116 in the solar field. This resource is a non-diagnostic isolate, which, by definition, lacks immediate cultural context and therefore lacks the data potential that would be required to be considered eligible for the NRHP or CRHR.

The completed Department of Parks and Recreation form is included with this report as a confidential attachment.

Anticipated Changes in the Next Period

Monitoring will continue for solar electrical trenching, duct banks, drainage excavations and other activities. The CRMs and NAMs will remain onsite to continue monitoring and to respond to discoveries if they occur.

Comments, Issues or Concerns

During this reporting period, there was an increase in scheduling issues regarding timeliness in requests, discrepancies in activities, misidentified locations, and missing information:

- On September 18, 2013, activity managers and the schedulers stated that a new contractor was to start excavations of bore holes. It was confirmed during this discussion that no ground disturbances would occur on this date due to permitting and requests still being filed; however, later that same day a cultural team observed this activity occurring. This was a non-compliance issue per CUL-2 and CUL-6.
- During the September 19, 2013, construction meeting, the CRS reported issues and non-compliance incidents. The CRS stated that borehole locations, which require spot-check-level monitoring, continually are misidentified on the activity maps and that CRMs/NAMs need to have these areas accurately identified in order to clear these holes so work can proceed. The schedule for September 20, 2013, was again inaccurate. This was a non-compliance issue per CUL-2.
- Bore holes for Alpha East, which require spot-check-level monitoring, were backfilled on September 20, 2013, prior to being cleared by cultural resources monitors. This was a non-compliance issue per CUL-6.

No impacts to cultural resources were noted as a result of any of the incidents of non-compliance discussed in this report.

The CRS identified non-compliance concerns at the construction management meetings; however, contractor compliance with Cultural Resources Conditions of Certification requirements continued to be unacceptable. Consequently, a Non-Compliance Report (NCR) was issued; this was NCR No. 1. It has been recommended that the contractor(s) undergo the appropriate trainings and realign their work to be in compliance with the Conditions of Certification.

Resolution

1. Have the subcontractors involved in the non-compliance incidents retrain in the Worker's Environmental Awareness Program (WEAP).
2. Reiterate to all subcontractors and their personnel, the importance of adhering to schedule obligations and procedures for all excavation activities.
3. Continue to provide the CRS with a list of the anticipated work plans 3 weeks in advance with updates provided within 5 days of changes or additions. The schedule should report accurate activity information that includes, but is not limited to, subcontractor, excavation details, and location.

The subcontractors involved in the non-compliance incidents have now been re-instructed in procedures for ground-disturbing activities and the importance of adhering to schedules and obligations under the Conditions of Certification, specifically CUL-2 and CUL-6. One subcontractor was WEAP retrained on October 3, 2013, the other is scheduled for

Dale Rundquist

retraining on October 8, 2013. The Non-compliance Resolution Report for NCR No. 1, is attached to this report.

Sincerely,
CH2M HILL

RE: PAL-5, Summary of paleontological monitoring and mitigation activities at the Mojave Solar Plant (MSP) for the period of September 2013

Dear Mr. Rundquist,

This letter is to update you on SWCA Environmental Consultants paleontological monitoring and mitigation activities at the MSP site during the period of September 1 through September 30, 2013. SWCA's Paleontological Resource Monitor (PRM) was onsite part time monitoring drilling, trenching and excavation operations in Alpha East and Beta East and trenching operations in Beta West. All monitoring activities occurred in Quaternary alluvium.

During the course of monitoring, SWCA's paleontologists observed no fossils and recorded no (0) new significant fossil localities. No significant fossils were collected and no significant fossil resources were destroyed by construction activity. No concerns regarding paleontological resources were identified during paleontological monitoring in September 2013.

It is a pleasure working with you on this project. If you have any questions please do not hesitate to contact me at 626-240-0587 ext 6605 or at ccorsetti@swca.com.

Respectfully,

The safety department has updated the report and will submit to you.**

SOIL&WATER-1

Provide an analysis on the effectiveness of the drainage, erosion, and sediment control measures and the results of monitoring and maintenance activities.

Please see the attached Construction Site Stormwater Runoff Control Inspection forms. All site BMP's functioned accordingly and there was no runoff from the site. The contractor reports as of September 30, 2013 that 150 lf (24,280 lf total for project) of straw rolls and 0 lf (16,219 lf total for project) of new swale have been installed for this month. The existing fiber rolls and swales continued being monitored, maintained, and replaced as needed. The QSP reports that a sand build-up of 2 inches is common on the straw waddles. These BMP's were effective in preventing sediment run off from the site. There are seven concrete washout stations (3 in Alpha and 4 in Beta). Additionally, the steel rumble strips remain in place at the Alpha main entrance and on Lockhart Road adjacent to the TAB main entrance. They were effective in preventing dirt and mud from being tracked from the site onto Harper Lake Road and Lockhart Road as well as an effective deterrent against the spreading of noxious weeds. The steel beams are continuously maintained to prevent clogging. Street sweeping of the construction entrances and Harper Lake Road and Lockhart Road is occurring on an as needed basis as a means of good housekeeping; it has improved and will continue to be the main activity to keep the streets free of dirt and mud, especially when high

winds occur. Soil stabilizer wasn't used for this month on traffic areas as daily watering was an effective means for dust control. Project site areas for the month that have been stabilized are 0 acres for Alpha East (279.50 acres total), 0 acres in Alpha West (369 acres total), 0 acres in Beta East (502 acres total), and 0 acres in Beta West (102.50 acres total). An amount of 2 inches of sand was reported in the retention basins between collectors. Trash collection was taken care of daily but repeated high volumes of trash have called for additional trash containers, which are now on site. It has been stressed to the construction team to remind the contractors to clean up their own trash, especially any accumulating in the trenches. A recycling program has been added to lessen the trash loads. Wood pallets, glass and plastic are now being disposed of in separate bins/areas. Sand removal along tortoise fences was done daily. Please see attachments, which include the weekly Construction Site Stormwater Runoff Control Inspection forms signed by the project QSP and the Bureau Veritas site inspector.

SOIL&WATER-2

The project owner shall comply with the Waste Discharge Requirements (WDRs) established in Soil and Water Resources Appendices C, D, and E for the construction and operation of the surface impoundments (evaporation ponds), land treatment units, and storm water management system. These requirements relate to discharges, or potential discharges, of waste that could affect the quality of waters of the state, and were developed in consultation with staff of the State Water Resources Control Board and/or the applicable California Regional Water Quality Control Board (hereafter "Water Boards"). It is the Commission's intent that these requirements be enforceable by both the Commission and the Water Boards. In furtherance of that objective, the Commission hereby delegates the enforcement of these requirements, and associated monitoring, inspection and annual fee collection authority, to the Water Boards. Accordingly, the Commission and the Water Board shall confer with each other and coordinate, as needed, in the enforcement of the requirements. The project owner shall pay the annual waste discharge permit fee associated with this facility to the Water Boards. In addition, the Water Boards may "prescribe" these requirements as waste discharge requirements pursuant to Water Code Section 13263 solely for the purposes of enforcement, monitoring, inspection, and the assessment of annual fees, consistent with Public Resources Code Section 25531, subdivision (c). No later than sixty (60) days prior to any wastewater or storm water discharge or use of land treatment units, the AMS project shall provide documentation to the CPM, with copies to the Lahontan RWQCB, demonstrating compliance with the WDRs established in Appendices C, D, and E. Any changes to the design, construction, or operation of the ponds, treatment units, or storm water system shall be requested in writing to the CPM, with copies to the Lahontan RWQCB, and approved by the CPM, in consultation with the Lahontan RWQCB, prior to initiation of any changes. The AMS project shall provide to the CPM, with copies to the Lahontan RWQCB, all monitoring reports required by the WDRs, and fully explain any violations, exceedances, enforcement actions, or corrective actions related to construction or operation of the ponds, treatment units, or storm water system. **SWAT2-01-00, construction plans for the Evaporation ponds and LTU's were submitted to the CEC, Lahontan and CBO on June 6, 2013 and approved by all agencies on June 11, 2013. SWAT2-02-00, a modification to the LTU plans was submitted to the CEC and Lahontan on August 5, 2013, and an approval was issued on August 8, 2013. SWAT2-03-00, for the monitoring well system was submitted to the CEC and Lahontan on August 14, 2013, approval pending. SWAT2-04-00 for a change in**

verification was requested by the CEC but AEPC suggested that any change will be covered by the closure compliances, COMPLIANCE-12, -13 and -14. The CEC responded on September 12, 2013 that they were in agreement.

SOIL&WATER-4

Well abandonment status for remaining abandonments submitted to CPM on 09.06.12, As of 09.06.12, the CEC has approved all well abandonments with the exception of wells 11 and 14 (stuck pump wells). They require a wildlife survey in the area of the two wells to ensure that their habitats won't be disrupted with the use of explosives for the stuck pump wells. As of 10.13.2012, the well contractor was able to remove the pump from Well #11 by conventional means. However, Well #2 has now been determined as having a stuck pump and needing explosives to remove. The abandonment package was revised and resubmitted to the CEC on 10.22.2012. CEC has approved the use of explosives on Wells #2 and #14 as of October 31, 2012. As of March 5, 2013, the remaining wells to be abandoned are: Ryken and Wetlands. Wells #2 and #14 (by explosives) and 8, 10, 19, were abandoned during January 2013 but their well completion reports were finalized this month, please see attachments. Ryken and Wetlands wells were approved to be abandoned by SBC on May 7, 2013. Final abandonment was completed on May 17, 2013 and well completion reports were submitted to the CEC for approval. **An exhibit indicating final production well locations will be provided to the CEC once they are determined.**

SOIL&WATER-5

Beginning six (6) months after the start of construction, the project owner shall prepare a semi-annual summary report of the amount of water used for construction purposes. The summary shall include the monthly range and monthly average of daily water usage in gallons per day.

The running total of water usage for construction/testing purposes from August 30, 2011 to September 30, 2013 is 304,039,672 gallons. To date, there have been 494 working days which equates to 615,465 gal/day. This equates to 12,161,587 gal/month.

SOIL&WATER-9

Prior to the start of construction of the sanitary waste system, the project owner shall submit to the County of San Bernardino for review and comment, and to the CPM for review and approval, plans for the construction and operation of the project's proposed sanitary waste septic system and leach field. These plans shall comply with the requirements set forth in County of San Bernardino Code Title 3, Division 3, Chapter 8 Waste Management, Article 5, Liquid Waste Disposal and Title 6, Division 3, Chapter 3, and the Uniform Plumbing Code. Project construction shall not proceed until the CPM has approved the plans. The project owner shall remain in compliance with the San Bernardino County code requirements for the life of the project.

The septic plans were submitted to CEC on 04/03/2012 for review and approval. CEC approved on 04/23/2012.

SOIL&WATER-10

The project owner shall obtain a permit to operate a nontransient, non-community water system with the County of San Bernardino at least sixty (60) days prior to commencement of construction at the site. The project owner shall supply updates annually for all monitoring requirements and submittals to County of San Bernardino related to the permit, and proof of annual renewal of the operating permit.

Alpha #1 well permit issued by San Bernardino County on 01/10/2012.

Alpha #2 well permit issued by San Bernardino County on 01/10/2012.

Beta #3 well permit issued by San Bernardino County on 06/04/2012.
