RE: AQ-SC3, AQ-SC4, AQ-SC5, and WORKER SAFETY-8 Monitoring and Mitigation Activities at Mojave Solar Project (09-AFC-5C) for October 1 through October 31, 2013

Dear Mr. Rundquist:

This letter is to update you on the air quality construction monitoring occurring at the Mojave Solar Project (MSP) site during October 2013. Compliance with the WORKER SAFETY-8 condition was also monitored. Construction activities occurred October 1 through 31, 2013. Compliance monitoring was performed by Jose Manuel Bravo Romero of Abengoa; who is the full-time onsite Air Quality Construction Mitigation Manager (AQCMM). I, Christopher Waller of CH2M HILL, am the designated AQCMM delegate and visited the site on October 30, 2013, to ensure compliance with record keeping and conditional requirements.

Overview

Construction activities in October included heat transfer fluid (HTF) pipe installation, steam generator assembly, power block foundation and structure construction, underground tunnel gatehouse construction, excavation and construction of various drainage structures, trenching and backfilling of electrical cable installation for evaporation ponds, steam turbine generator assembly, expansion vessel assembly, duct bank excavation and construction, level III box installation, fire protection system installation, beta bridge and other steel structure erection, bioremediation facility construction, hydro-demolition, water well and pump installation, barrier fence grounding rod installation, and tortoise fence installation. Construction was monitored for compliance with Conditions of Certification (COC) AQ-SC3, AQ-SC4, AQ-SC5, and WORKER SAFETY-8. New equipment brought onsite during October was issued a tag in accordance with AQ-SC5a, and evaluated for compliance with AQ-SC5b through AQ-SC5d. A summary of the compliance with the Air Quality Construction Mitigation Plan is provided in the following sections. Daily, weekly, and monthly observation logs and other site inspection forms are maintained onsite and available upon request.

Compliance Assessment

AQ-SC3 – Fugitive Dust Control

All of the AQ-SC3 COCs were in effect during October 2013. The following section summarizes each COC and describes the level of compliance.

- AQ-SC3a: Soil stabilizers on main access roads and delivery areas

  Soil stabilizers have been applied to finished access roads and delivery areas. Main roads in Beta have been paved.

- AQ-SC3b: Watering of disturbed areas

  Watering of actively disturbed areas was performed for all construction activities with the potential to create airborne dust plumes. When necessary, watering was intensified as directed by the onsite AQCMM and construction managers.

- AQ-SC3c: Speed limits

  The required speed limits have been enforced onsite.

- AQ-SC3d: Speed limit signage

  Speed limit signage has been posted and is clearly visible at all site entrances.

- AQ-SC3e: Tire inspection and washing prior to exiting to paved roadway

  Although tire washing stations have not been installed, all construction vehicles are inspected for dirt and other debris prior to exiting to paved public roadways.

- AQ-SC3f: Tire washing station

  As stated above, no tire washing stations have been installed. However, tires of construction vehicles are inspected for dirt and other debris prior to exiting to paved public roadways.

- AQ-SC3g: Unpaved exit treatment

  Rumble plates are installed at all site exits.

- AQ-SC3h: Construction vehicles use approved entrances only

  When traveling between sites, construction vehicles use approved entrances only.

- AQ-SC3i: Run-off onto public roadways

  Earthmoving activities have resulted in run-off being directed away from paved public roadways. In addition, fiber rolls have been placed where the potential for run-off onto public roadways exist. Watering has not resulted in run-off onto public roadways.

- AQ-SC3j: Sweeping of paved roads within construction site

  Sweeping of paved roads within the site is performed as necessary.

- AQ-SC3k: Sweeping of public paved roadways with access to the MSP site

  Sweeping of Harper Lake Road is performed as necessary. In addition, soil stabilizers were applied to Harper Lake Road north of Lockhart Road and Lockhart Road west of Harper Lake Road.

- AQ-SC3l: Stabilization of storage piles

  Significant earthmoving activities performed during October 2013 included excavation for various foundations within Alpha and Beta. Areas disturbed during foundation excavation were sufficiently watered during all construction activities. Additional storage piles exist to the east of the Alpha evaporation pond. These storage piles are watered frequently, and will be re-distributed at a later date. All other soil piles are temporary excavation spoils or grading excesses that are re-distributed prior to exceeding the 10-day limit for cover or treatment.

- AQ-SC3m: Stabilization of transported solid bulk material

  Transported solid bulk materials are sufficiently watered, and at least one foot of freeboard is provided during transportation.

- AQ-SC3n: Wind control techniques

  Wind fencing has been installed in Alpha East, Alpha West, and Beta along the eastern and western borders of each area.

AQ-SC4 – Dust Plumes & WORKER SAFETY-8 – Site Worker Fugitive Dust Protection

The following construction activities were performed during the October 1 to October 31, 2013, reporting period:

- HTF pipe and hose installation and welding
- HTF rack assembly
- Electrical tray HTF foundation
- Underground tunnel gate house construction
- Foundation and structure construction within the power blocks
- Trenching, pouring concrete, installing conduit pipes, and backfilling of duct banks
- Excavation and construction of various drainage structures (oil/water sumps, manholes, etc.)
- Steam generator assembly
- Fire protection system installation
- Electrical, administration, and control building construction and installation
- Level III box installation
- Steam turbine and condenser assembly
- Barrier fence grounding rod installation
- Excavation and construction of various foundations within Alpha and Beta
- Beta bridge steel structure construction
- Balance of plant (BOP) steel structure construction
- Vertical loop structure installation
- Backfilling of electrical cable trenches at the evaporation ponds
- Solar field low voltage and fiber optic cable installation
- Water treatment plant construction and equipment installation
- Condensate pump construction
- Bioremediation facility construction
- Hydro-demolition
- Polished water pump installation
- Excavation for production wells

- Expansion vessel installation
- Tortoise fence installation

Certain construction activities were suspended due to high wind conditions on two occasions in October 2013. During the stoppage, work within buildings and small miscellaneous outdoor construction activities continued. The Table 1 summarizes the high wind events and the construction activities stopped during the events.

Table 1
October 2013 Construction Activity Stoppages due to High Wind Conditions

Date	Time	Description of Construction Activity Stoppage	Maximum Recorded Wind Speed (mph)
10/09/2013	12:00	Large cranes in the power blocks were stopped.	25
10/28/2013	11:00	Large cranes in the power blocks were stopped.	24

Soil stabilization has been implemented on finished haul roads and delivery areas. In addition, main roads in Beta have been paved. Unfinished areas and haul roads without soil stabilizers are watered daily to mitigate against the formation of fugitive dust. A truck washing station has not been installed. However, rumble plates are installed at all site entrances/exits, and the tires of construction vehicles are inspected for dirt and other debris and swept clean as needed prior to exiting the site onto paved roadways.

AQ-SC5 – Diesel-Fueled Engine Control

A list of equipment operated onsite during October 2013 is attached to this letter. The list contains equipment information including manufacturer, model, California Air Resources Board (CARB) Equipment Identification Number (EIN), engine model year, engine horsepower, and U.S. Environmental Protection Agency (USEPA) certified tier level.

The following list summarizes each COC for AQ-SC5 and describes the level of compliance.

- AQ-SC5a: Equipment Tags

  A visible air quality tag with a unique number (AQ #) was issued and adhered to all equipment that arrived onsite between October 1 and October 31, 2013.

- AQ-SC5b: USEPA Engine Tier Requirement

  All construction equipment that arrived onsite between October 1 and October 31, 2013, had Tier 3 engines, except one lift (AQ #482) with a Tier 2 engine arrived onsite on October 7. The subcontractor who operates the forklift is currently working with the equipment rental company to obtain a good faith effort (GFE) letter for the lift. If a GFE letter cannot be obtained, the lift will be taken offsite immediately.

  At the end of September, there were two Sky-Trak lifts with Tier 2 engines onsite, and the subcontractors who operated the lifts were working on obtaining a GFE letter for each of the two lifts. A GFE effort letter could not be obtained for either lift, so both lifts were removed from the site in early October.

- AQ-SC5c: Retrofit Control Termination

  No equipment with retrofit control technology was brought onsite.

- AQ-SC5d: Maintenance Records

  Maintenance records for all vehicles are available upon request.

- AQ-SC5e: "All diesel heavy construction equipment shall not idle for more than five minutes. "

  Idle time was monitored by the activity managers and AQCMM. This condition was met during this reporting period.

- AQ-SC5f: Electric motors

  The use of construction equipment with electric motors was not feasible for current construction activities.

Please feel free to call (714) 435-6268 for questions, clarifications, or additional information.

Sincerely,

CH2M HILL

1.0 Introduction

Per the California Energy Commission's (CEC) Abengoa Mojave Solar Project Commission Decision, CEC-800-2010-008-CMF, Docket Number 09-AFC-5, the following monthly compliance report (MCR) summarizes compliance with biological resource protection requirements during construction activities from October 1 through October 31, 2013 on the Mojave Solar Project (MSP) in San Bernardino County, California (see Figure 1).

This report does not repeat information provided in previous MCRs and assumes environmental compliance was met unless otherwise noted.

As outlined in the CEC Project Decision, the following biological conditions of certification (COC) pertaining to monitoring activity covered by this MCR include, but are not limited to:

- BIO-2 Designated Biologist Duties
- BIO-3 Biological Monitor Selection, Qualifications and Duties
- BIO-4 Designated Biologist and Biological Monitor Authority
- BIO-5 Worker Environmental Awareness Program (WEAP)
- BIO-6 Biological Resources Mitigation Implementation and Monitoring Plan (BRMIMP) Development and Compliance
- BIO-7 Impact Avoidance and Minimization Measures
- BIO-11 Desert Tortoise (*Gopherus agassizii*) Exclusion Fencing, Clearance Surveys, and Translocation Plan
- BIO-14 American Badger (*Taxidea taxus*) and Desert Kit Fox (*Vulpes macrotis)* Impact Avoidance and Minimization Measures
- BIO-18 Common Raven (*Corvus corax)* Monitoring, Management, and Control

This MCR was also provided to California Department of Fish and Wildlife (CDFW) and United States Fish and Wildlife Service (USFWS).

1.1 Status of Biological Staff

Attachment 1 provides a summary table of the biological staff submitted for approval on this project and the status of their agency approvals.

In October, no new additional biological monitors were submitted to the agencies for approval. There are eight outstanding requests to approve Authorized Biologists' that were submitted prior to October, that are pending USFWS determination (Attachment 1).

2.0 Ongoing Construction Monitoring

The following section summarizes biological monitoring activities conducted by CH2M HILL throughout October 2013.

Please refer to sections "Desert Tortoise," "Invasive Weed Species," "Kit Fox and Other Mammals," "Nesting Birds," "Raven Monitoring, Management, and Control," "Wildlife

Injury and Mortalities," and "Other Species" for specific information about wildlife and plants found by biological monitors in September.

The MSP requires that all onsite staff receive the WEAP training (via DVD) and a brochure prior to start of work. A total of 387 new staff went through WEAP training in October. Attachment 2 provides an ongoing summary table of the project's WEAP attendance and the hard copy sign-in training logs for October 2013.

On a typical weekday, one biological monitor or designated biologist:

- Monitors Harper Dry Lake Road at least every 3 hours during the desert tortoise active period (September through October);
- Monitors active construction areas, parking lots, laydown yards, and any areas of potential threat to vegetation, soils, or wildlife;
- Inspects desert tortoise exclusion fences and tortoise guards as required;
- Inspects potential entrapment areas (e.g., trenches);
- Monitors for formation of potential standing water;
- Inspects kit fox exclusion buffers and downloads motion-sensor cameras at shelter sites;
- Conducts raven observations and point count surveys;
- Reports hazardous waste spills to the designated biologist;
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches from the ground surface; and
- Performs other special biological-resources-related activities as required.

2.1 Construction Activities

In October, construction activities occurred in all project sectors with the highest concentration in the Alpha and Beta power block areas. In Alpha East, ground disturbance included various foundations, drainage excavations, duct bank trenching, and trenching around the evaporation ponds. In Alpha West, solar field electrical trenching was monitored. In Beta East, disturbance included duct banks, electrical trenching, various foundations, and drainage excavations. In Beta West, ground disturbance included solar electrical trenching and trenching around the evaporation ponds. Additionally, systematic trash removal by sector continues during the month and maintenance of desert tortoise fence occurred on an as-needed basis.

Installation of the permanent desert tortoise exclusionary fence continued in October along the boundaries of Beta East, Alpha West, and Alpha East. Installation was completed along the northern fence of Alpha West. The original fencing around Alpha East and West has yet to be removed. Installation of desert tortoise fence is considered fence maintenance because it is installed concurrently with the security/personnel fence and within the existing desert tortoise fence to the extent possible. More information on the biological monitoring of this activity is provided in the "Desert Tortoise" section below.

2.1.1 Desert Tortoise Exclusion Fence Repairs

In October, biological staff made comprehensive weekly inspections of the perimeter desert tortoise exclusion fence, which is more frequent than the monthly fence inspections required by BIO-11 and the Biological Opinion.

One minor fence repair was required in October. On October 4, biological staff discovered the post joining the exclusion fence to the tortoise guard had been broken. Construction was notified and the post was promptly replaced.

Rain Events

One rain event occurred this month on October 9. All fences were checked for damage the following day. After the rain event, approximately 1 to 2 inches of standing water was observed in each of the Alpha and Beta evaporation ponds. As per the email sent on September 12 to the CEC, evaporation ponds were monitored several times a day by biological staff and any use or activity by bird life was recorded. The project owner is actively pursuing implementing bird deterrents during construction phase, which are required during operations by the Evaporation Pond Monitoring and Adaptive Management Plan (COC BIO-19).

2.2 Hazardous Material Spills

One hazardous material incident occurred on October 23 and was reported to biological staff. In Alpha East, the biological monitor identified an oil leak from a personal vehicle. Health and safety personnel were notified and executed proper clean-up and disposal.

2.3 Non-compliance Notifications or Reports

2.3.1 Non-compliance Report

A biological non-compliance report (NCR)—NCR 3—was issued to MSP on October 21 regarding NCR-2 Resolution of BIO-2 and BIO-7. Between October 1 and 21, biological staff documented five unattended vehicles parked outside the exclusionary fencing including taking license plate numbers and photographs. Biological notices (prepared by Abeinsa EPC [AEPC] stating resolution protocol) were placed on the vehicles. On October 9, biological staff asked AEPC staff to provide the October vehicle documentation and received nothing. Biological staff requested October's vehicle documentation again on October 14, and were provided with only September documentation. Upon reiteration of request to receive documentation on incidents that occurred up to October 18, AEPC did not provide any resolution documentation on the vehicles. AEPC did provide one vehicle documentation on October 21; however, this instance had been cleared by biological staff and was therefore not included in the violation list. Therefore, it can be concluded that such documentation does not exist, and compliance with NCR-2 Resolution is not being maintained.

2.3.2 Non-compliance Report Resolution

On October 28, AEPC provided the CEC with Biological NRC-3 Resolution. The Resolution established a responsible contact for conformance documentation as well as installing "no parking" signs and cones along Lockhart Road.

Per BIO-4 Verification, the CEC has not made a determination of success or failure on either NCR-2 or NCR-3.

2.4 Trash

In high activity areas, proper trash disposal is an ongoing concern. As work remains concentrated in the Alpha and Beta power blocks these areas are of the greatest concern for trash accumulation. Biological staff reminded MSP that BIO-7 requires trash receptacles with self-closing lids and asked them to pay particular attention to sources of food waste. Activity managers have been reminded to ask their crews to dispose of trash in appropriate containers and that loose bags of trash are not acceptable. MSP construction personnel continue to clean up loose debris associated with the site on weekly rounds or after strong wind events.

3.0 Special-status Species Monitoring and Other Surveys

3.1 Desert Tortoise

In September, no construction activities required desert tortoise clearance surveys. The new desert tortoise fence installation is considered maintenance of existing fence. The trenches were previously dug and backfilled; therefore, no new vegetation was disturbed outside of the fence line. Biological monitors escorted construction crews out to the fence replacement in the morning and intermittently inspected desert tortoise fence installation and access routes throughout the day. No sensitive species were observed during fence installation in October.

No desert tortoises were observed on the project site or any access road to the project in October.

3.2 Invasive Weeds

Fivehook bassia (*Bassia hyssopifolia*), Russian thistle (*Salsola tragus*), and tamarisk (*Tamarix ramosissima*) were observed onsite in October. All three species have a California Invasive Plant Council (Cal-IPC) "high" or "moderate" dispersal or establishment rating.

MSP construction staff began manual removal of these species throughout the site and along Lockhart Road. Two small tamarisk plants were removed from the southern gate of Beta East, at an established location. In late October, four small tamarisk plants were identified in the southwest corner of Alpha West, and will be removed in November.

MSP is currently in contract negotiations to obtain a California licensed herbicide applicator.

3.3 Kit Fox and Other Mammals

October 1 marked the end of desert kit fox (DKF) whelping (pupping) season. Per BIO-14, the protocol changes during the non-whelping season.

At the start of October, there were four active DKF sites: DKF Site #1 in the southwest irrigation pipe location in Alpha East, DKF Site #2 in the trench pipe between mirror rows 126 and 127 in Alpha East, DKF Site #3 adjacent to mirror row 68 in Alpha West, and DKF Site #4 in row 72 also in Alpha West.

Activity levels at the kit fox shelter sites monitored by cameras were variable throughout the month. Almost all activity was characterized by a visit of a single adult kit fox, usually in the morning or evening. DKF Site #2 recorded one observation of two adult kit foxes on October 19. DKF Site #4 recorded several observations of two adult kit foxes on October 25, 26, 29, and 31. No pups were observed in October.

The motion sensor camera at DKF Site #2 showed consistent activity through the month. The camera at DKF Site #1 showed consistent activity from October 1 through 22, with periods of inactivity October 6, 16, and 18. On October 25 the site was closed and the camera was moved to DKF Site #4. DKF Site #4 showed activity from October 25 to 31 with periods of inactivity on October 28 and 30. Two adult kit foxes were observed by motion sensor cameras on October 25, 26, 29, and 31. There were seven incidental kit fox observation by MSP staff during the month (Figure 2).

Biological staff inspected the integrity of the exclusion buffers and downloaded motion sensor cameras on a daily basis. MSP also provides a kit fox activity summary to CEC twice a month.

On October 7, 8, 21, 22, and from 28 to 31, biological staff monitored construction crews working within the 250-foot exclusion buffer at DKF Site #2. Prior to all work within the buffer, construction crews signed a protocol verifying their understanding of correct procedure within the exclusion buffer. Additionally, all construction crews were verbally briefed before entering the buffer. Prior to work within the buffer, biological staff checked the motion sensor camera to confirm whether the kit fox was within the shelter site. In addition, MSP construction staff was not allowed to block either end of the trench to ensure that the kit fox would have protected egress.

3.3.1 Agency Coordination and Follow up Actions

On October 18, biological staff received guidance from CEC staff biologist to begin "passive hazing" as defined in BIO-14 regardless of kit fox activity. That same day, biological staff loosely placed natural material (Russian thistle) at the entrance to DKF Site #1. The site was camera monitored for 7 consecutive days to ensure that the shelter site was clear of kit fox. On October 25, the entrance of the pipe was closed by construction personnel (Figure 2).

During this call, the CEC also provided clarification that if the biologist could see the end of the shelter site, then it could be closed immediately, regardless of activity-level.

On October 31, CDFW, CEC staff biologist and the designated biologists had a call to discuss alternate "passive hazing" techniques for shelter sites where the end is not visible

(DKF Site #2, #3, and #4). Wendy Campbell, the new CDFW representative assigned to MSP, stated that she endorses use of one-way doors and does not approve of trickling water in pipes. The designated biologists were tasked with drafting a new protocol that defines use of one way doors, identifying offsite shelter sites, and monitoring requirements. This protocol would be submitted to MSP and agencies for review.

3.3.2 Kit Fox Entrapment

On October 11, a kit fox was reported trapped in a concrete vault in the center of Alpha East power block (Photograph 1, Figure 2). The designated biologist notified the CEC and was directed to set up a 100-foot exclusion buffer around the vault. The biological staff coordinated with construction personnel to erect the buffer, shut down equipment, and clear construction personnel from the area. CEC staff biologist, Ann Crisp, gave permission to construct a ramp into the vault (Photograph 1) as the first option for kit fox egress. The ramp was placed into the vault after majority of MSP construction personnel had left the site. CDFW biologists were placed on-call in case the kit fox was still trapped the following morning and they could enter the vault and capture the individual. Early October 12, the kit fox was no longer in the vault, and it appears the ramp allowed the kit fox to exit on its own.

Photograph 1. Ramp constructed for entrapped kit fox in power block vault.

Following the entrapment incident, biological staff coordinated with MSP staff to prevent further issues of wildlife entrapment onsite. Several potential entrapment areas have since been fenced in both power block areas. Per BIO-2, biological staff continues to inspect the site for potential areas of entrapment.

3.4 Nesting Birds

No active nests or nesting behavior by birds were observed on MSP in September.

Biweekly breeding raven nest surveys were not required in October. These surveys will commence again in March 2014.

3.5 Raven Monitoring, Management, and Control

Common raven monitoring activities continued on the MSP site per BIO-18 and as outlined in the *Common Raven Monitoring, Management and Control Plan* (Raven Plan). The October Monthly Common Raven Monitoring Results provides information on monitoring activities, survey methods, maps, incidental raven observations, point count survey results and datasheets (Attachment 3).

3.6 Wildlife Injuries and Mortalities

There were five wildlife mortalities on MSP in October. One coachwhip (*Masticophis flagellum*) and two Jackrabbits (*Lepus californicus*) were found dead on Harper Lake Road. A deer mouse (*Peromyscus sp.*) was found dead under a container that was relocated in Alpha East. All remains were collected and buried offsite.

The fifth mortality was a juvenile Ruby-crowned kinglet (*Regulus calendula*), a species protected by the Migratory Bird Treaty Act (Figure 2). This individual was delivered to biological personnel on October 22. Initially, MSP construction personnel captured the injured bird and placed it in a cardboard box. The box was given to four other individuals over several hours before the biologist was notified. The bird died before it was transferred to the biologist. Biological staff reminded construction staff that the handling of injured and dead wildlife is in violation of the WEAP guidelines.

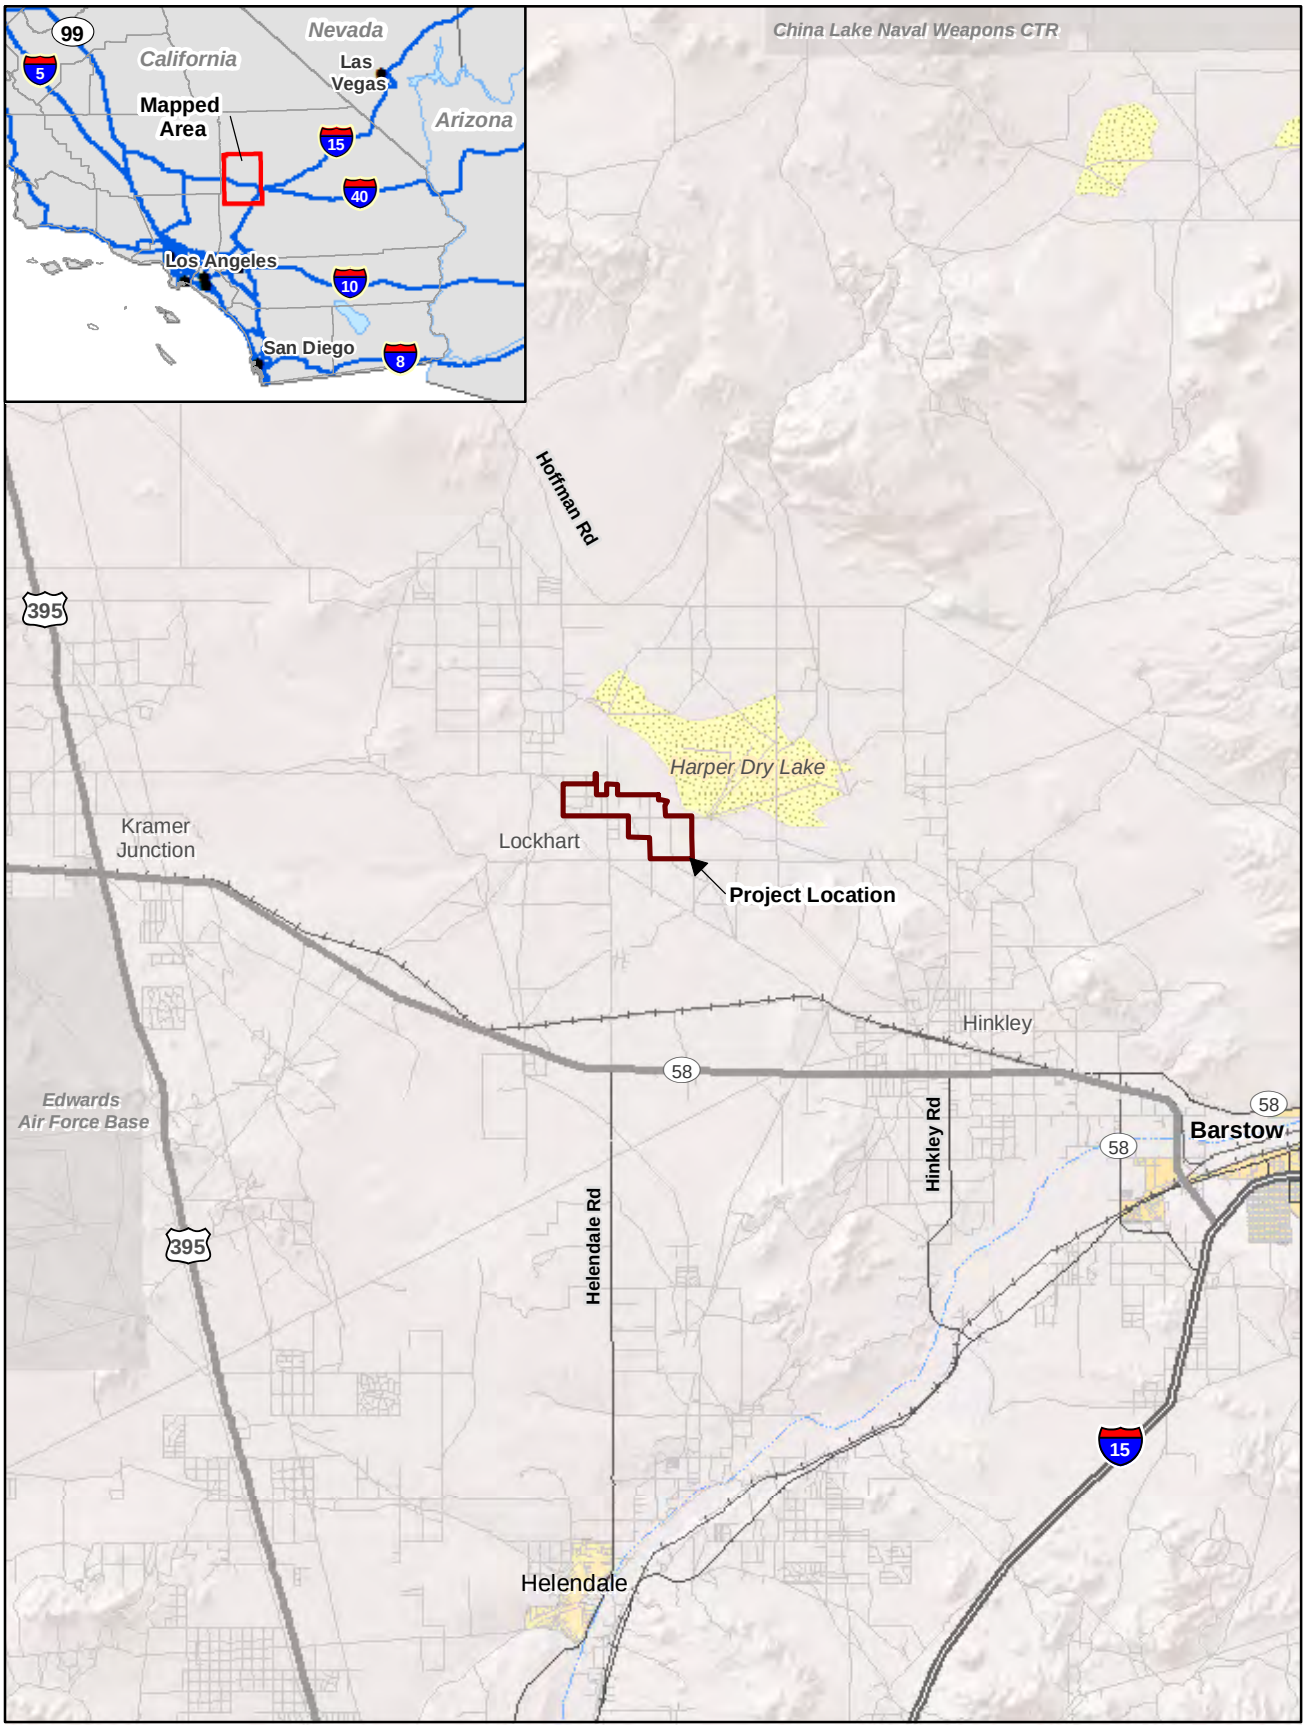

In accordance with the *Migratory Bird Special Purpose Utility Salvage Permit-Solar*, the remains of the Ruby-crowned kinglet were frozen and will be stored until USFWS Office of Law Enforcement (OLE) can collect for necropsy. According to monthly reporting requirements, the SPUT spreadsheet was submitted to the OLE Resident Agent in Charge (RAC), Regional Migratory Bird Permit Office (RMBPO), and Ecological Services Field Office (ESFO).

MSP has not yet received the results of the Cooper's hawk necropsy reported in the August MCR.

3.7 Other Species

A list of observed wildlife species is included in Attachment 4. One sensitive species the loggerhead shrike *(Lanius ludovicianus*) was observed several times on, or just outside, the MSP perimeter fence. The shrike is a CDFW Species of Concern.

MSP was issued a 6-month USFWS *Migratory Bird Special Purpose Utility Salvage Permit – Solar* that authorizes project staff to collect, transport, and possess carcasses of species protected by the Migratory Bird Treaty Act. This temporary permit expires February 15, 2014.

Introduction

The Abengoa Mojave Solar Project (MSP) is required to provide a monthly report on common ravens (*Corvus corax*) to the California Energy Commission (CEC), United States Fish and Wildlife Service (USFWS), and California Department of Fish and Wildlife (CDFW). The CEC Final Decision includes Condition of Certification (COC) BIO-18 stating that the project owner shall implement control measures to manage its construction site and related facilities in a manner to control raven populations and to mitigate cumulative and indirect impacts to desert tortoise associated with regional increase in raven numbers. In accordance with BIO-18, the CEC approved the Common Raven Monitoring, Management, and Control Plan (Raven Plan) on March 26, 2012. Refer to BIO-18 and the Raven Plan for monitoring and survey protocol description.

Construction Monitoring Activities

The following section summarizes biological monitoring activities conducted by CH2M HILL throughout October 2013.

On a typical weekday, one biological monitor or designated biologist:

- Monitors Harper Dry Lake Road at least every 3 hours during the desert tortoise active period (September through October);
- Monitors active construction areas, parking lots, laydown yards and any areas of potential threat to vegetation, soils, or wildlife;
- Inspects desert tortoise exclusion fences and tortoise guards as required;
- Inspects potential entrapment areas, e.g., trenches;
- Monitors for formation of potential standing water;
- Inspects kit fox exclusion buffers and downloaded motion-sensor cameras at shelter sites;
- Conducts raven observations and bi-weekly point counts;
- Reports hazardous waste spills to the designated biologist;
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches from the ground surface; and
- Performs other special biological activities as required.

Methods

The designated biologist ensures that the biological monitors are trained to implement the Raven Plan in both raven monitoring and management measures. Biological staff also conducts 10-minute stationary point counts at 7 locations (Supplement 1). The purpose of the point counts is to record raven observations including date, time, location, number of individuals, age, behavior, distance from the station location, and any other pertinent notes (e.g., nesting behavior). This information is recorded on a hard copy datasheet. Point counts are conducted with a minimum of one week between.

Point counts were positioned to monitor project-specific activities and features that have potential to attract or subsidize ravens. The Raven Plan defines six "conditions of concern" as:

1. Availability of water from evaporation ponds;
2. Potential creation of new perching/roosting/nesting sites for ravens;
3. Temporary water ponding potential from dust suppression associated with construction, operation, and maintenance;
4. Raven food sources from soil disturbance (rodents, insects, etc.) and road kill associated with construction activity;
5. Human food and waste management; and
6. Landscaping that could provide foraging, perching, and available water opportunities.

During daily monitoring activities, biological staff records incidental observations of ravens interacting with MSP. This includes any raven observation within site boundaries, flying overhead, or adjacent to the site. These observations are recorded in field notebooks and include date, general site location, global positioning system (GPS) location, number of individuals, and activity. The GPS information is also presented on a map.

The incidental observations are also used to identify potential problem areas. Problem areas are those requiring management actions. If a problem area is identified, the surveys will be increased to a weekly basis until the issue is resolved. Habitual perching sites will be identified and actions taken to discourage use. If hazing techniques are employed to discourage raven use, biologists will record information on date, time, location, habitat, number of individuals, and response to hazing. Potential or active raven nests will be documented and removed according to Raven Plan specifications. Biological staff will report on whether control measures are working and provide further recommendations in the biological monthly compliance report.

Results

Incidental Observations

In October, no raven nests, nesting behavior, or raven "problem areas" were observed within the project boundaries.

During biological monitoring, 157 ravens were incidentally observed during 76 separate observations (Table 1). Because ravens are indistinguishable from one another, multiple sightings of individual birds likely occur. Therefore, the number of observations does not reflect the number of individual birds onsite. Common ravens were observed throughout the site, with many occurrences along Lockhart Road, and in Beta West near Trough Assembly Building (TAB) and evaporation ponds, and the channel south of Alpha East (Supplement 2). The most common raven behavior observed was flying overhead. Ravens were also observed perched on fences and various transmission line poles, but were not habitually using a perch location.

Point Counts

In October, two biweekly point counts were conducted according to Raven Plan protocol. Point counts were conducted on October 10 and October 30, 2013, by Joey Verge (JRV).

On October 10 one raven was observed at Station 2 and 3, and three ravens were observed at Stations 6 and 7. On October 30 three ravens were observed at Station 3 and one was observed at Station 5. Point count observations did not document any nesting behavior or problem areas. The Common Raven Fixed Point Observation Data Sheets are provided in Supplement 3.

Table 2 provides a summary of point count observations.

Nest Monitoring

According to the Raven Plan, biweekly breeding raven nest surveys were not required in October. These surveys will commence again in March 2014.

Subject: Mojave Solar Project (09-AFC-5C)
Monthly Compliance Report CUL-1 and CUL-6

Dear Mr. Rundquist:

CH2M HILL is assisting Abengoa Solar Inc. (Abengoa) in complying with California Energy of Commission (CEC) Conditions of Certification, specifically, CUL-1 and CUL-6, for cultural resource monitoring, as set forth in the Commission Decision for the Mojave Solar Project (MSP). This report covers the cultural resources monitoring conducted from October 1, 2013 through October 31, 2013, by CH2M HILL.

Personnel Active in Cultural Monitoring This Period

The Cultural Resources Monitors (CRMs) included: Kurt Lambert, Sonia Sifuentes, Mike DeGiovine, Daniel Ewers, Gabriel Kitchen, Ryan Rolston, Jesse Shelmire, and Sylvere Valentin. The Native American Monitors (NAMs) included: Howie Diaz, Tommy Herrera, Rebecca Brierty, Vanessa Brierty, Joseph Lente, Leona Galvin, and David Perezchica. Additionally, Cultural Resource Specialist, Gloriella Cardenas, was onsite.

Monitoring and Associated Activities This Period

Ground-disturbing activities subject to cultural resource monitoring occurred in various locations of the MSP. In Alpha East, electrical trenching, duct bank trenching, manhole vaults, various foundations, oil/water sump pump, bore holes (a spot check activity), and drainage excavations were monitored. In Alpha West, duct bank trenching and bore holes (a spot check activity), and PVC installations were monitored. In Beta East, ground disturbances subject to monitoring included: solar field grounding, duct bank trenching, various foundations, manhole vault excavation, electrical trenching, and bore holes (a spot check activity). Bioremediation foundations, electrical trenching and PVC installations were monitored in Beta West.

Cultural Resources Discoveries This Period

None.

Anticipated Changes in the Next Period

Monitoring will continue for solar electrical trenching, duct banks, foundations, drainage excavations, and other activities. The CRMs and NAMs will remain onsite to continue monitoring and to respond to discoveries if they occur.

The Alternate CRS, Daniel Ewers, is no longer at MSP. An Alternate CRS, Sylvere Valentin, has been approved by the CEC and will be onsite going forward.

Comments, Issues or Concerns

During this reporting period, there was an increase in non-compliance issues resulting in four Non-Compliance Reports (NCR). Below is a summary of the reports submitted for the month of October:

- NCR No. 2. On October 1, 2013, bore holes for grounding rods in Alpha East, which require a spot check level of monitoring, were in the process of being closed prior to having been given cultural clearance. The subcontractor, High Light Electric, who had been previously reported for backfilling bore holes without clearance on September 20, 2013, was discovered in the act of repeating this infraction by cultural monitors. This was a non-compliance issue per CUL-6.
- NCR No. 3. On October 15, 2013, the CRS was asked to provide monitoring for an unscheduled activity to be conducted by the subcontractor Ken Curran. This activity was reported as bore holing for fence posts, which requires a spot check level of monitoring. The CRS was told this activity had not started yet. Upon field checking, the monitors discovered that trenching had occurred and not bore holing. This excavation was conducted without cultural monitors present. This was an infraction on two counts: the contractor/management misidentified the activity and excavations occurred without cultural monitors. This triggered the NCR per CUL-2 and CUL-6.
- NCR No. 4. On October 15, 2013, a subcontractor at Mojave Solar Project, Steiny, began excavation of a trench in the Beta East section of the project area without cultural monitors present. The cultural team arrived at the time assigned, and found the activity in operation. This infraction was reported to the CRS. This incident resulted in Cultural NCR No. 4, per CUL-6.
- NCR No. 5. On October 16, 2013, during the daily general meeting with the contractor, an activity was reported by an activity manager as ongoing; this activity consisted of an unscheduled and unmonitored trenching in the Alpha East section of the project area. An immediate request to halt the activity was made by the CRS. The activity manager replied that the subcontractor, Ken Curran, would be contacted and instructed to stop excavations. This is the second infraction by the management team and the subcontractor committed during this reporting period, the subject of Cultural NCR No. 3. This was an infraction per CUL-2 and CUL-6.

No impacts to cultural resources were noted as a result of any of the incidents of non-compliance discussed in this report.

Resolutions

- NCR No. 2 Resolution. Because this is the second non-compliance incident with this subcontractor, and because these infractions occurred within a 2-week period, it is evident that trainings and re-examinations of protocols have not been a beneficial resolution. It was recommended that this company be placed on a probationary status for the remainder of their contract. Should a third incident occur, it was recommended that the resolution should be suspension of that company from the project.
- NCR No. 3 Resolution. Because of an increase of non-compliance events, all activity managers and subcontractors active in excavations should undergo a review of procedures for ground-disturbing operations. Construction was recommended to realign their work to be in compliance with the Conditions of Certification and existing plans. The subcontractor was retrained in the Worker's Environmental Awareness Program (WEAP).
- NCR No. 4 Resolution. A general requirement should be provided by the project owner and owner's engineer to all subcontractors that no excavations whatsoever are to occur without a cultural resources monitor present, or without a specific clearance from the CRS directly. The subcontractor should be WEAP retrained.
- NCR No. 5 Resolution. Because this is the second infraction with the subcontractor, and management team (see Cultural NCR No. 3), the parties involved should undergo a review of procedures for ground-disturbing operations and be put on a probationary status for the remainder of the contract. Suspension of work for a minimum of 5 working days should occur upon a third infraction by these parties, with all-hands retraining and training documentation to occur during that interval. The parties involved were required to review the Conditions of Certification and associated compliance documents for Mojave Solar Project regarding cultural resource compliance. Additionally, the contractor was asked to provide written certification acknowledging that review within 5 working days of the NCR.

Attached to this report are the Non-Compliance Resolution Reports with supporting documentation that corrective actions were conducted by the Project Owner's contractor.

Sincerely,
CH2M HILL

Gloriella Cardenas, M.A., RPA

Monitors: Daniel Ewers/Howie Diaz **Time:** 9:00 am

Describe Affected Resources:

Potential impacts could have included destruction of buried cultural deposits.

Summary of Corrective Actions:

1. Have the subcontractor, High Light Electric, put on a probationary status for the remainder of their contract. Should a third incident occur, the resolution should be suspension of that company from the project.
2. All construction is recommended to realign their work to be in compliance with the Conditions of Certification and existing plans.
3. Continue to provide the CRS with a list of the anticipated work plans 3 weeks in advance with updates provided within 5 days of changes or additions. The schedule should report accurate activity information which includes, but is not limited to, subcontractor, excavation details, and location.

Conditions of Approval:

1. The subcontractors involved in the non-compliance incident have been placed on probation for the remainder of their contract. A 5 day supsension shall result should a third infraction occur.
2. As of 10/15/2013 a printed map of non-monitored activities has been provided to the CRS daily, to ensure all non-monitored activities are cleared prior to start of ground disturbance.
3. Additional maps and information in writing have been provided by scheduling as of 10/15/2013. These documents will be provided to the CRS in the time required per CUL-2and will accurately depict ground disturbing activities and their locations.

Customer Non Conformity Report

Project: Mojave Solar Project	**Reference:** Cultural NCR No. 02
Date:	
Affected Area: CEC COC CUL-6 Alpha Power Block	

Description of the problem:
Quoted from CRS' NCR Report No. 2 sent to the CEC:
An issue of non-compliance occurred, in which the schedule was inaccurate and bore holes were mapped incorrectly and had to be sought out by the cultural teams assigned to check spoils. Once located, it was discovered that this day's new bore holes had been backfilled and the subcontractor had not waited for cultural clearance. Additional information can be found in today's report and within the weekly report. From what was observed, no impacts to cultural resources were noted.

Subject: Cultural Monitor Awareness-Read and Understand

For Follow up: Urgent Priority.

All,

Due to recent increase of non-compliance events related to ground disturbance throughout the site, I am obligated to send and instruct each and everyone of you to review and understand the attached Conditions of Certifications (extracted directly from the California Energy Commission) and the Statutes and Regulations Regarding the Preservation & Protection of Cultural & Historical Resources.

Understand the importance of these documents prior to performing any ground disturbance on site. You must coordinate and advice of all excavations, trenches, shovel work, and boreholes required prior to making your machines touch the ground. If requested accordingly (via 3 week look ahead schedule) we are more likely to accommodate your civil work. Cultural monitoring crews (Native American and archeologist) are a must while executing your work and must be incorporated into your work schedule. Through your activity manager, you can request them accordingly and if you have any doubts you can always contact Tania Ramirez (661-754-3778) or myself (661-754-6108).

Once again, really understand the importance of this matter. Thanks for your understanding.

NON-COMPLIANCE RESOLUTION REPORT

MOJAVE SOLAR, LLC

MOJAVE SOLAR PROJECT

NCR Number: Cultural NCR No. 4 **Date:** 10/15/2013 **NCRR Number:** 4

Monitors: Kurt Lambert/Tommy Herrera **Time:** 7:00 am

Describe Affected Resources:

Potential impacts could have included destruction of buried cultural deposits.

Summary of Corrective Actions:

The recommendations are as follows:

1. Because of an increase of non-compliance events, all activity managers and subcontractors active in excavations should undergo a review of procedures for ground disturbing operations.
2. The subcontractor should be WEAP retrained.
3. A general requirement should be provided by the project owner and owner's engineer to ***all*** subcontractors that no excavations whatsoever are to occur without a cultural resources monitor present, or without a specific clearance from the CRS directly.
4. Construction is recommended to realign their work to be in compliance with the Conditions of Certification, existing plans, and SHPO stipulations regarding Determination of No Adverse Effects, specifically, the specifications listed in the Modification in the Mojave Solar Plant Construction Cultural Monitoring Requirements, dated April 9, 2013

Conditions of Approval:

The following is a summary of the corrective actions implemented as reported by the contractor:

1. All activity managers and those subcontractors active in excavations underwent a one-on-one review of procedures for ground disturbance.
2. Steiny, the subcontractor, has finished contract work on the project site; the Project Owner's contractor will have them retrained in WEAP upon their return prior to having them start any work.
3. An email was sent out 10/23/2013 to all contractors and activity managers, even those not directly involved in ground disturbance, instructing them to review and understand the Conditions of Certification and Statutes and Regulations Regarding the Preservation & Protection of Cultural & Historical Resources (reference email communication). In addition, the requirement of monitors present in all ground disturbing activities is communicated in the WEAP training, Construction Kick-off Meetings, and subcontractor weekly meetings.

Included in this report are the supporting documents to the corrective actions.

Customer Non Conformity Report

Project: Mojave Solar Project	**Reference:** Cultural NCR No. 04
Date: 10/15/2013	
Affected Area: CEC COC CUL-6 Alpha Power Block	

Description of the problem:
Quoted from CRS' NCR Report No. 4 sent to the CEC:
On October 15, 2013 a subcontractor at Mojave Solar Project, Steiny, began excavation of a trench in the Beta East section of the project area, without cultural monitors present. The cultural team arrived at the time assigned by the scheduler, and found the activity in operation. This infraction was reported to the CRS. Assessments were made to the area to ascertain no impacts to cultural resources appear to have occurred as a result of this non-compliance event.
This activity required full time monitoring and ground disturbance was initiated and a trench measuring 50 feet in length, 12 inches in width and 8 inches in depth, was excavated without cultural coverage, which is an infraction of CUL-6.

NON-COMPLIANCE RESOLUTION REPORT

MOJAVE SOLAR, LLC

MOJAVE SOLAR PROJECT

NCR Number: Cultural NCR No. 5 **Date:** 10/16/2013 **NCRR Number:** 5

Documenter: Gloriella Cardenas/CRS **Time:** 9:20 am

Describe Affected Resources:

Potential impacts could have included destruction of buried cultural deposits as a result of unmonitored excavations.

Summary of Corrective Actions:

The following specific remedial actions are also recommended:

1. Because this is the second infraction with the subcontractor, and management team (see Cultural NCR No. 3), the parties involved should undergo a review of procedures for ground disturbing operations and be put on a probationary status for the remainder of the contract. Suspension of work for a minimum of five working days should occur upon a third infraction by these parties, with all-hands retraining and training documentation to occur during that interval.
2. The CRS must be provided with complete construction schedules. The schedule must accurately describe all ground disturbing activities and their locations. Updates and changes to the construction schedule must be provided to the CRS 5 days prior to the activity.
3. The parties involved shall review the Conditions of Certification and associated compliance documents for Mojave Solar Project in regards to cultural resource compliance, and provide written certification acknowledging that review within 5 working days.

Conditions of Approval:

The following is a summary of the corrective actions implemented as reported by the contractor:

1. Activity managers, supervisors, and coordinators underwent a review of procedures for ground disturbance. Ken Curran, the subcontractor involved in the infraction committed on 10/15/2013 and 10/16/2013, has been put on probationary status for the remainder of their contract. This was communicated via a Non-Conformity form.
2. The contractor will provide daily monitoring schedule maps to all monitors, via the CRS, effective as of 10/24/2013 morning. Deliverable to stakeholders will still be sent out daily to reflect the quantity of monitors requested the next day.
3. Activity managers, supervisors, and coordinators have undergone a review of the permitting and compliance documents for Mojave Solar Project in regards to cultural compliance. Attached is sign-in-sheet acknowledging review by 10/24/2013.

Included in this report are the supporting documents to the corrective actions, as provided by the contractor.

Customer Non Conformity Report

Project: Mojave Solar Project	**Reference:** Cultural NCR No. 05
Date: 10/16/2013	
Affected Area: CEC COC CUL-6 Alpha Power Block	

Description of the problem:
Quoted from CRS' NCR Report No. 5 sent to the CEC:
On October 16, 2013, during the daily general meeting with the contractor, an activity was reported by an activity manager as ongoing; this activity consisted of an unscheduled and unmonitored trenching in the Alpha East section of the project area. An immediate request to halt the activity was made by the CRS. The activity manager replied that the subcontractor would be contacted and instructed to stop excavations.
Assessments for impacts could not be conducted immediately because the CRS was not provided with the locations of where the trenching had occurred, although 4 requests were made for this data. Additionally, the subcontractor was approached and asked to offer the trenching locations. The subcontractor opted not to respond. It was over 24 hours before the CRS was given a map showing trenching locations and impact assessments could be made. It was only then that it was learned that unmonitored trenching took place not only in Alpha East, but in Beta West and Beta East as well.
The subcontractor and management team for this infraction have been identified as Ken Curran, previously the subject of Cultural NCR No. 3.
This activity was not reported to the CRS in the timely fashion required by CUL-2. This activity was not accurately described or located, nor was the necessary information regarding ground disturbance provided to the CRS, also an infraction per CUL-2. This activity required full time monitoring and ground disturbance but was completed without cultural coverage, which is an infraction per CUL-6.

RE: PAL-5, Summary of paleontological monitoring and mitigation activities at the Mojave Solar Plant (MSP) for the period of October 2013

Dear Mr. Rundquist,

This letter is to update you on SWCA Environmental Consultants paleontological monitoring and mitigation activities at the MSP site during the period of October 1st through October 31st, 2013. SWCA's Paleontological Resource Monitor (PRM) was onsite part-time monitoring drilling, trenching and excavation operations in Alpha East and Beta East and trenching operations in Alpha West and Beta West. All monitoring activities occurred in Quaternary alluvium.

During the course of monitoring, SWCA's paleontologists observed no fossils and recorded no (0) new significant fossil localities. No significant fossils were collected and no significant fossil resources were destroyed by construction activity. No concerns regarding paleontological resources were identified during paleontological monitoring in October 2013.

It is a pleasure working with you on this project. If you have any questions please do not hesitate to contact me at (626) 240-0587 ext 6605 or at ccorsetti@swca.com.

Respectfully,

Cara Corsetti, M.S.

The CSS shall submit in the MCR a monthly safety inspection report
The safety department has updated the report and will submit to you.

SOIL&WATER-1

Provide an analysis on the effectiveness of the drainage, erosion, and sediment control measures and the results of monitoring and maintenance activities.
Please see the attached Construction Site Stormwater Runoff Control Inspection forms. All site BMP's functioned accordingly and there was no runoff from the site. The contractor reports as of October 31, 2013 that 150 lf (24,430 lf total for project) of straw rolls and 0 lf (16,219 lf total for project) of new swale have been installed for this month. The existing fiber rolls and swales continued being monitored, maintained, and replaced as needed. The QSP reports that no sand

13911 Park Avenue, Suite 208
Victorville, CA 92392
Phone: 480-287-1419

build-up is prevalent on the straw waddles. These BMP's were effective in preventing sediment run off from the site. There are six concrete washout stations (4 in Alpha and 2 in Beta). Additionally, the steel rumble strips remain in place at the Alpha main entrance and on Lockhart Road adjacent to the TAB main entrance. Additionally, rumble strips have been added at the Alpha south and Alpha west entrances. They were effective in preventing dirt and mud from being tracked from the site onto Harper Lake Road and Lockhart Road as well as an effective deterrent against the spreading of noxious weeds. The steel beams are continuously maintained to prevent clogging. Street sweeping of the construction entrances and Harper Lake Road and Lockhart Road is occurring on an as needed basis as a means of good housekeeping; it has improved and will continue to be the main activity to keep the streets free of dirt and mud, especially when high winds and storm events occur. Soil stabilizer wasn't used for this month on traffic areas as daily watering was an effective means for dust control. Project site areas for the month that have been stabilized are 0 acres for Alpha East (279.50 acres total), 0 acres in Alpha West (369 acres total), 0 acres in Beta East (502 acres total), and 0 acres in Beta West (102.50 acres total). An amount of 2 inches of sand was reported in the retention basins between collectors. Trash collection was taken care of daily. It has been stressed to the construction team to remind the contractors to clean up their own trash, especially any accumulating in the trenches. A recycling program has been added to lessen the trash loads. Wood pallets, glass and plastic are now being disposed of in separate bins/areas. Sand removal along tortoise fences was done daily. Please see attachments, which include the weekly Construction Site Stormwater Runoff Control Inspection forms signed by the project QSP and the Bureau Veritas site inspector.

SOIL&WATER-2

The project owner shall comply with the Waste Discharge Requirements (WDRs) established in Soil and Water Resources Appendices C, D, and E for the construction and operation of the surface impoundments (evaporation ponds), land treatment units, and storm water management system. These requirements relate to discharges, or potential discharges, of waste that could affect the quality of waters of the state, and were developed in consultation with staff of the State Water Resources Control Board and/or the applicable California Regional Water Quality Control Board (hereafter "Water Boards"). It is the Commission's intent that these requirements be enforceable by both the Commission and the Water Boards. In furtherance of that objective, the Commission hereby delegates the enforcement of these requirements, and associated monitoring, inspection and annual fee collection authority, to the Water Boards. Accordingly, the Commission and the Water Board shall confer with each other and coordinate, as needed, in the enforcement of the requirements. The project owner shall pay the annual waste discharge permit fee associated with this facility to the Water Boards. In addition, the Water Boards may "prescribe" these requirements as waste discharge requirements pursuant to Water Code Section 13263 solely for the purposes of enforcement, monitoring, inspection, and the assessment of annual fees, consistent with Public Resources Code Section 25531, subdivision (c). No later than sixty (60) days prior to any wastewater or storm water discharge or use of land treatment units, the AMS project shall provide documentation to the CPM, with copies to the Lahontan RWQCB, demonstrating compliance with the WDRs established in Appendices C, D, and E. Any changes to the design, construction, or operation of the ponds, treatment units, or storm water system shall be requested in writing to the CPM, with copies to the

13911 Park Avenue, Suite 208
Victorville, CA 92392
Phone: 480-287-1419

Lahontan RWQCB, and approved by the CPM, in consultation with the Lahontan RWQCB, prior to initiation of any changes. The AMS project shall provide to the CPM, with copies to the Lahontan RWQCB, all monitoring reports required by the WDRs, and fully explain any violations, exceedances, enforcement actions, or corrective actions related to construction or operation of the ponds, treatment units, or storm water system. **SWAT2-01-00, construction plans for the Evaporation ponds and LTU's were submitted to the CEC, Lahontan and CBO on June 6, 2013 and approved by all agencies on June 11, 2013. SWAT2-02-00, a modification to the LTU plans was submitted to the CEC and Lahontan on August 5, 2013, and an approval was issued on August 8, 2013. SWAT2-04-00 for a change in verification was requested by the CEC but AEPC suggested that any change will be covered by the closure compliances, COMPLIANCE-12, -13 and -14. The CEC responded on September 12, 2013 that they were in agreement. SWAT2-03-00, for the monitoring well system was submitted to the CEC and Lahontan the week of 10/28. Abeinsa EPC engineering staff is still coordinating with the CEC and Lahontan on the final design.**

SOIL&WATER-4

Well abandonment status for remaining abandonments submitted to CPM on 09.06.12, As of 09.06.12, the CEC has approved all well abandonments with the exception of wells 11 and 14 (stuck pump wells). They require a wildlife survey in the area of the two wells to ensure that their habitats won't be disrupted with the use of explosives for the stuck pump wells. As of 10.13.2012, the well contractor was able to remove the pump from Well #11 by conventional means. However, Well #2 has now been determined as having a stuck pump and needing explosives to remove. The abandonment package was revised and resubmitted to the CEC on 10.22.2012. CEC has approved the use of explosives on Wells #2 and #14 as of October 31, 2012. As of March 5, 2013, the remaining wells to be abandoned are: Ryken and Wetlands. Wells #2 and #14 (by explosives) and 8, 10, 19, were abandoned during January 2013 but their well completion reports were finalized this month, please see attachments. Ryken and Wetlands wells were approved to be abandoned by SBC on May 7, 2013. Final abandonment was completed on May 17, 2013 and well completion reports were submitted to the CEC for approval. **ASI and Abeinsa EPC are still working on the approval of the new location of the Beta #4. An exhibit indicating final production well locations will be provided when the issue is resolved.**

TRANS-2 & 4 [A/T]

The project owner shall, in coordination with the County of San Bernardino, develop and implement a construction traffic control plan prior to earth moving activities. Specifically, the overall traffic control plan shall include the following:
• Schedule delivery of heavy equipment and building material deliveries, as well as the movement of hazardous materials to the site, including the adjacent lay-down area;
• **Coordinate with the County of San Bernardino to mitigate any potential adverse traffic impacts from other proposed construction projects that may occur during the construction phase of AMS;** and
• Ensure there is adequate access for emergency vehicles at the AMS site.
The construction traffic control plan shall also include the following for activities of substantial stature:
• Signing, lighting, and traffic control device placement; and
• Temporary travel lane closures and potential need for flaggers.
To mitigate traffic on SR-58, Abeinsa EPC proposed extending the left hand turn lane on eastbound SR-58 from its current 300 feet to 600 feet. The pavement to perform this task was already in place so that meant a restriping of the turn lane was all that was required. Caltrans agreed on 09/28/2011 (see attached) that the lane extension would help mitigate construction traffic during peak construction time. The turn lane encroachment permit was approved by Caltrans on 03/07/2013 and Caltrans provided the permit completion notice on 10/23/2013, please see attachments.

TRANS-5 [A/T]

The project owner shall not allow hazardous materials deliveries during non-daylight periods (during both construction and operation) to enhance safety at the rail crossing. A record of hazardous materials deliveries shall be provided to the CPM as required in HAZ-3.
Please see attached monthly delivery lists, the Beck Oil delivery lists and the Haz Mat delivery list attached and required as part of HAZ-3.

At least 30 days (or a lesser number of days mutually agreed to by the project owner and the CBO) prior to the start of each increment of construction, the project owner shall submit to the CBO for review and approval the final design plans, specifications and calculations for equipment and systems of the power plant switchyard, outlet line and termination, including a copy of the signed and stamped statement from the responsible electrical engineer attesting to compliance with the applicable LORS, and send the CPM a copy of the transmittal letter in the next Monthly Compliance Report. The following activities shall be reported in the Monthly Compliance Report:
A. Receipt or delay of major electrical equipment;
Please see attached list of receipt of major electrical equipment.
B. Testing or energization of major electrical equipment;
Please see attachments for electrical tests to date.
C. The number of electrical drawings approved, submitted for approval, and still to be submitted.

Subject: RE: Mojave Solar

There are two regulations governing diesel IC engines; State ATCM (17 CCR 93115) and Federal NESHAP/ NSPS (40 CFR Part 60, Subpart IIII). At one time the ATCM did require emergency engines to meet current tier at time of installation, however to align the ATCM with the NSPS this latest tier requirement was replaced with specific emission limits during the most recent amendment of the ATCM effective May 19, 2011. Latest tier requirement is therefore now defunct. Current regulations dictate our/your requirements (See permit conditions 8 & 9 Firepump and 10 & 11 Genset).

The MDAQMD published the Final Determination of Compliance (Mojave Solar FDOC) for the Mojave Solar Project in May of 2010. We specified presumptive BACT for emergency IC engines as an engine meeting latest Tier at time of purchase and Compliance with the ATCM/NSPS. I say presumptive because we note in the FDOC that BACT was not required. Any mention of installing current tier was solely to address the pending ATCM limits which required current tier be installed. The emergency IC engine emission limits found in Mojave Solar FDOC (Table 6) are specified below and correlate to size of engine (bhp).

Table 6 – MSP – Limits for Emergency Internal Combustion Engines

Proposed Engine	NO_x + NMHC (g/bhp-hr)	PM (g/bhp-hr)	CO (g/bhp-hr)	So_x
346 hp Tier III 15 ppm S fuel	3.0	0.15	2.6	
4190 bhp Tier II 15 ppm S fuel	4.8	0.15	2.6

Chris,
Could you please provide the specific documentation that states our emergency generators do not have to be Tier IV? Our owner's environmental consultant is insisting that we must be Tier IV compliant so if you can provide where emergency generators are exempt, it would be greatly helpful. I am also going to send you the engines we've currently purchased for both the back up generators and the back up fire pumps. They ones for the back up generators are smaller than what the CEC permit specifies but need your review and approval. I will send them over to you shortly.

Good Morning Chris,
I would like to request your assistance for the air permitting process of the Mojave Solar project. Please let me know any/all requirements for our back up engines for both the

plant operations and for the back up fire pumps. I have been told that these engines must be Tier IV as of Jan 1, 2013 but I'm not sure if we've already been grand fathered in per the specifications of the project from the CEC. Also, any other areas that may not have been covered in the CEC Final Decision (ie cooling towers, ullage system). Any help you can provide will be greatly appreciated. Also, contractor surveys will be done for November for chemical inventory. I will give you these 1st week of December. Thanks,

DTSC has listed your hazardous waste activities status as:

Small Quantity Generator (SQG)

Your EPA ID Number does not expire. However, if any of the information required in the form changes, (e.g. RCRA Site Name, hazardous waste activity status, contact information, etc.), you may be required to notify DTSC by resubmitting a Form 8700-12 (see the instructions accompanying Form 8700-12 at http://www.epa.gov/osw/inforesources/data/form8700/8700-12.pdf) and a DTSC Form 1358 (see the instructions accompanying DTSC Form 1358 at http://www.dtsc.ca.gov/HazardousWaste/upload/GISS_-FORM_1358.pdf). If you plan to cease or have ceased operation at the RCRA Site Location, you must notify DTSC as well. For this, you could send a letter to DTSC requesting to inactivate the EPA ID Number. A letter will be sent to the contact person indicating the change(s) based on the submitted documentation.

Please keep in mind that if you have the hazardous waste activity status of a **"Large Quantity Generator"**, there is a required Biennial Reporting that must be filed with your appropriate state or region. For more information, please visit http://www.epa.gov/epawaste/inforesources/data/form8700/contact.pdf to find the contacts for States and EPA Regions. If you have any RCRA Notification (EPA ID Number) questions, please call 415-495-8895. This RCRA Notification service telephone line is operated by DTSC's Contractor, Tetra Tech, Inc.

Subject: Traffic Study Review – Abengoa Mojave Solar Project

Dear Mr. Pochmara,

The California Department of Transportation (Caltrans) reviewed the Traffic Study prepared for the proposed Abengoa Mojave Solar Project, and accepts the mitigated extension of the left-turn lane from SR-58 to Harper Lake Road by three hundred feet. This will provide sufficient storage and will not affect the LOS "C" on SR-58.

Also, please provide a reference that the Barstow Park and Ride site was abandoned.

If you have any questions regarding this letter, please contact Dan Kopulsky at (909) 383-4557 for assistance.

Sincerely,

Daniel Kopulsky
