1516 Ninth Street  
Sacramento, California 95814

Dear Mr. Rundquist,

The attached amended Monthly Compliance Report for December 2014 is submitted for your review as part of ongoing reporting required by the California Energy Commission's Conditions of Certification for the Mojave Solar Project. This amended report adds Inspection Reports in accord with the Stormwater Pollution Prevention Plan which were recently supplied by the AEPC. This monthly report will be added to the archival site on Box.com. Please contact me with any question.

Sincerely,  
William "Bill" Grisolia

Attachment: Monthly Compliance Report

# **Mojave Solar Project Monthly Compliance Report**

## **December 2014 Reporting Period**

Prepared for:

Mojave Solar LLC  
42134 Harper Lake Road  
Hinkley, California 92347

# Introduction

During construction of the Mojave Solar Project, monthly compliance reports are provided to the California Energy Commission (CEC) as required by Condition of Certification COMPLIANCE-6 of the Commission Decision, docket number 09-AFC-5C. This is the Monthly Compliance Report (MCR) for December 2014.

In December, construction activities occurred in all project sectors, with the highest concentration in the Alpha and Beta power block areas. Construction activities included fire protection system installation, water treatment plant (WTP) electrical equipment installation, balance of plant (BOP) piping assembly and heat trace installation. In both Alpha and Beta, ground disturbance activities included various foundations, trenching and grounding.

Construction within the power blocks included insulation installation. Steam system tests were conducted in the Beta power block. Both Alpha and Beta cooling towers cascaded water during December. MSP discharged water into a single evaporation pond in both Alpha and Beta in December. Bird deterrents were installed at both the Alpha and Beta evaporation ponds. Collector (trough) commissioning continued, and heat transfer fluid (HTF) was circulated through the solar fields and power blocks during defocus and tracking / focus testing of collectors.

The following table provides a summary of all areas covered in this report.

| Mojave Solar Project Monthly Compliance Reporting |                |
|---------------------------------------------------|----------------|
| Condition of Certification (COC) Topics           | Appendix       |
| Air Quality                                       | See Appendix A |
| Biological Resources                              | See Appendix B |
| Cultural Resources                                | See Appendix C |
| Paleontological Resources                         | See Appendix D |
| Waste Management                                  | See Appendix F |
| Worker Safety                                     | See Appendix E |
| Soil and Water                                    | See Appendix F |
| General Conditions                                | See Appendix F |
| Civil                                             | See Appendix F |
| Structural                                        | See Appendix F |
| Mechanical                                        | See Appendix F |
| Electrical                                        | See Appendix F |
| Transmission System Engineering                   | See Appendix F |
| Compliance Matrix                                 | See Appendix G |
|                                                   |                |

Sacramento, CA 95814  
drundqui@energy.state.ca.us

Dear Mr. Rundquist,

As you know, commercial operation of the Mojave Solar Project began on December 4, 2014. Until the Certificate of Occupancy is issued by Bureau Veritas, the California Energy Commission ("CEC") has asked that monthly compliance reporting continue as originally required by the CEC Condition of Certification COMPLIANCE-6. The following is an update including Mojave Solar LLC ("MSLLC") submittals to and approvals by the CEC as well as a listing of any MSLLC filings submitted to, or permits issued by, other governmental agencies during the month of December, 2014.

## **Submittals\Approvals**

### **AQ-26**

On 12/03/2014, AQ26-01-00 was approved by the CEC for a revised Cooling Tower TDS Measurement and Emissions Calculation Protocol.

### **SOIL AND WATER 6**

On 12/02/2014, the CEC approved SOIL AND WATER-6-10-00, the 3rd QTR Groundwater Elevation and Quality Monitoring Report.

### **TRANS-1**

On 12/11/2014, TRANS1-03-00 was both submitted and approved by the CEC for completion of the Park and Ride parking lot condition.

## **Other Permits\Filings**

On 12/03/2014, MSP issued notification Trial Operation Completion of the Mojave Solar Project (CAISO Q#125).

On 12/04/2014, notification was received from CAISO that MSP was available for commercial operation beginning December 04, 2014.

On 12/11/2014, a Permit to Operate Steam Boiler and Pressure Vessel Tanks for the Mojave Solar Project was submitted to Bureau Veritas.

There were no other permits issued to or filings made by MSLLC for the month of December.

Please contact me with any question.

Sincerely,

William F. Grisolia

RE: AQ-SC3, AQ-SC4, AQ-SC5, and WORKER SAFETY-8 Monitoring and Mitigation  
Activities at Mojave Solar Project (09-AFC-5C) for December 1 through December 31,  
2014

Dear Mr. Rundquist:

This letter is to update you on the air quality construction monitoring occurring at the Mojave Solar Project (MSP) site during December 2014. Compliance with the WORKER SAFETY-8 condition was also monitored. Construction activities occurred December 1 through 31, 2014. Compliance monitoring was performed by Jose Manuel Bravo Romero of Abengoa; who is the full-time onsite Air Quality Construction Mitigation Manager (AQCMM). I, Christopher Waller of CH2M HILL, am the designated AQCMM delegate and visited the site on December 23, 2014, to ensure compliance with record keeping and conditional requirements.

## Overview

Construction activities in December included fire protection system installation, water treatment plant (WTP) electrical equipment installation, balance of plant (BOP) piping assembly, heat trace installation, power block grounding, and miscellaneous foundation construction. In addition, commissioning activities, including a performance test, occurred in December 2014. Construction activities were monitored for compliance with Conditions of Certification (COC) AQ-SC3, AQ-SC4, AQ-SC5, and WORKER SAFETY-8. No new diesel equipment was brought onsite during December 2014. All equipment onsite prior to December 2014 was issued a tag in accordance with AQ-SC5a, and evaluated for compliance with AQ-SC5b through AQ-SC5d. A summary of the compliance with the Air Quality Construction Mitigation Plan (AQCMP) is provided in the following sections. Daily, weekly, and monthly observation logs and other site inspection forms are maintained onsite and available upon request.

## **Compliance Assessment**

### **AQ-SC3 – Fugitive Dust Control**

All of the AQ-SC3 COCs were in effect during December 2014. The following section summarizes each COC and describes the level of compliance.

- **AQ-SC3a: Soil stabilizers on main access roads and delivery areas**

Soil stabilizers have been applied to finished access roads and delivery areas. Main roads in Beta have been paved.

- **AQ-SC3b: Watering of disturbed areas**

Watering of actively disturbed areas was performed for all construction activities with the potential to create airborne dust plumes. When necessary, watering was intensified as directed by the onsite AQCM and construction managers.

- **AQ-SC3c: Speed limits**

The required speed limits have been enforced onsite.

- **AQ-SC3d: Speed limit signage**

Speed limit signage has been posted and is clearly visible at all site entrances.

- **AQ-SC3e: Tire inspection and washing prior to exiting to paved roadway**

Although tire washing stations have not been installed, all construction vehicles are inspected for dirt and other debris prior to exiting to paved public roadways.

- **AQ-SC3f: Tire washing station**

As stated above, no tire washing stations have been installed. However, tires of construction vehicles are inspected for dirt and other debris prior to exiting to paved public roadways.

- **AQ-SC3g: Unpaved exit treatment**

Rumble plates are installed at all site exits.

- **AQ-SC3h: Construction vehicles use approved entrances only**

When traveling between sites, construction vehicles use approved entrances only.

- **AQ-SC3i: Run-off onto public roadways**

Earthmoving activities have resulted in run-off being directed away from paved public roadways. In addition, fiber rolls have been placed where the potential for run-off onto public roadways exist. Watering has not resulted in run-off onto public roadways.

- **AQ-SC3j: Sweeping of paved roads within construction site**

Sweeping of paved roads within the site is performed as necessary.

- **AQ-SC3k: Sweeping of public paved roadways with access to the MSP site**

Sweeping of Harper Lake Road and Lockhart Road is performed as necessary.

- **AQ-SC3l: Stabilization of storage piles**

Earthmoving activities performed during December 2014 included minor trenching and excavation activities in the power blocks. Areas disturbed during trenching or excavation were sufficiently watered during all construction activities. Storage piles generated as a result of excavation activities will be used as backfill. Additional storage piles exist to the east of the Alpha evaporation pond. These storage piles are watered frequently, and will be re-distributed at a later date. All other soil piles are temporary excavation spoils or grading excesses that are re-distributed prior to exceeding the 10-day limit for cover or treatment.

- **AQ-SC3m: Stabilization of transported solid bulk material**

Transported solid bulk materials are sufficiently watered, and at least one foot of freeboard is provided during transportation.

- **AQ-SC3n: Wind control techniques**

Wind fencing has been installed in Alpha East, Alpha West, and Beta along the eastern and western borders of each area.

#### **AQ-SC4 – Dust Plumes & WORKER SAFETY-8 – Site Worker Fugitive Dust Protection**

The following construction activities were performed during the December 1 to December 31, 2014 reporting period:

- Instrument and controls installation
- Miscellaneous foundation construction
- Power block insulation installation
- Power block grounding
- BOP piping assembly
- WTP electrical equipment installation
- Miscellaneous foundation construction
- Cable tray and cable tray insulation installation
- Heat trace installation
- Fire protection system installation

No high wind events (wind gusts of at least 25 mph) occurred during December 2014, and there were no work stoppages due to inclement weather during December 2014.

Soil stabilization has been implemented on finished haul roads and delivery areas. In addition, main roads in Beta and Harper Lake Road south of Lockhart Road have been paved.

Unfinished areas and haul roads without soil stabilizers are watered daily to mitigate against the formation of fugitive dust. A truck washing station has not been installed. However, rumble plates are installed at all site entrances/exits, and the tires of construction vehicles are inspected for dirt and other debris and swept clean as needed prior to exiting the site onto paved roadways.

#### **AQ-SC5 – Diesel-Fueled Engine Control**

Attachment 1 to this letter contains a list of equipment operated onsite during December 2014. The list contains equipment information including manufacturer, model, California Air

Resources Board (CARB) Equipment Identification Number (EIN), engine model year, engine horsepower, and U.S. Environmental Protection Agency (USEPA) certified tier level.

The following list summarizes each COC for AQ-SC5 and describes the level of compliance.

- **AQ-SC5a: Equipment Tags**

A visible air quality tag with a unique number (AQ #) was adhered to all equipment onsite between December 1 and December 31, 2014.

- **AQ-SC5b: USEPA Engine Tier Requirement**

All construction equipment onsite between December 1 and December 31, 2014, had Tier 3 engines. No new construction equipment arrived onsite during December 2014.

- **AQ-SC5c: Retrofit Control Termination**

No equipment with retrofit control technology was brought onsite.

- **AQ-SC5d: Maintenance Records**

Maintenance records for all vehicles are available upon request.

- **AQ-SC5e: "All diesel heavy construction equipment shall not idle for more than five minutes."**

Idle time was monitored by the activity managers and AQCMM. This condition was met during this reporting period.

- **AQ-SC5f: Electric motors**

The use of construction equipment with electric motors was not feasible for current construction activities.

Please feel free to call (714) 435-6268 for questions, clarifications, or additional information.

Sincerely,

CH2M HILL

Christopher Waller  
Staff Environmental Engineer  
AQCMM Delegate

# 1 Introduction

Per the California Energy Commission's (CEC) Abengoa Mojave Solar Project Commission Decision, CEC-800-2010-008-CMF, Docket Number 09-AFC-5C, this monthly compliance report (MCR) summarizes compliance with biological resource protection requirements during construction activities from December 1 through December 31, 2014, on the Mojave Solar Project (MSP) in San Bernardino County, California (see Figure 1, figures are at the end of this report).

This report does not repeat information provided in previous MCRs and assumes environmental compliance was met unless otherwise noted.

As provided in the CEC Final Decision, the following biological conditions of certification pertaining to monitoring activity covered by this MCR include, but are not limited to:

- BIO-2 Designated Biologist Duties
- BIO-3 Biological Monitor Selection, Qualifications and Duties
- BIO-4 Designated Biologist and Biological Monitor Authority
- BIO-5 Worker Environmental Awareness Program (WEAP)
- BIO-6 Biological Resources Mitigation Implementation and Monitoring Plan (BRMIMP) Development and Compliance
- BIO-7 Impact Avoidance and Minimization Measures
- BIO-11 Desert Tortoise (*Gopherus agassizii*) Exclusion Fencing, Clearance Surveys, and Translocation Plan
- BIO-14 American Badger (*Taxidea taxus*) and Desert Kit Fox (*Vulpes macrotis*) Impact Avoidance and Minimization Measures
- BIO-18 Common Raven (*Corvus corax*) Monitoring, Management, and Control
- BIO-19 Evaporation Pond Monitoring and Adaptive Management Plan

This MCR is also being provided to California Department of Fish and Wildlife (CDFW) and United States Fish and Wildlife Service (USFWS).

## 1.1 Status of Biological Staff

Attachment 1 provides a summary table of the biological staff submitted for approval on this project and the status of their agency approvals. Two CEC-approved biological monitors, Mark Bratton and Ed Morgan, were submitted for approval February 20, 2014 and are pending USFWS approval as desert tortoise Authorized Biologists.

## 2 Ongoing Construction Monitoring

This section summarizes biological monitoring activities conducted by CH2M HILL throughout December 2014. Biological monitoring did not occur on December 25 for observance of the holiday when the site was shut down.

---

Please refer to sections "Desert Tortoise," "Invasive Weed Species," "Kit Fox and Other Mammals," "Nesting Birds," "Raven Monitoring, Management, and Control," "Wildlife Injury and Mortalities," and "Observed Species" for specific information about wildlife and plants found by biological monitors in December. Temporary implementation of the avian monitoring at the evaporation ponds continued through December and is discussed in the "Evaporation Pond Monitoring" section.

The MSP requires that all onsite staff receive the WEAP training and a brochure within one week of arrival on the project site and annually for permanent employees. A total of 50 new staff went through WEAP training in December 2014. Attachment 2 provides an ongoing summary table of the project's WEAP attendance and the hard copy sign-in training logs for December 2014.

On a typical construction day, the biological monitor or designated biologist:

- Monitors Harper Dry Lake Road prior to increased traffic levels during morning and evening shift changes.
- Monitors active construction areas, parking lots, laydown yards, and any areas of potential threat to vegetation, soils, or wildlife;
- Monitors the evaporation ponds several times a day;
- Inspects desert tortoise exclusion fences and tortoise guards as required;
- Inspects potential entrapment areas (e.g., trenches, vaults, basins, buildings);
- Monitors for formation of potential standing water;
- Inspects kit fox exclusion buffers and downloads photos from motion-sensor cameras at shelter sites;
- Conducts raven observations and bi-weekly point-count surveys;
- Conducts point counts at evaporation ponds and adjacent wetlands;
- Investigates reports of hazardous waste spills;
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches above the ground surface; and
- Performs other special biological-resources-related activities, as required.

## **2.1 Construction Activities**

In December, construction activities occurred in all project sectors, with the highest concentration in the Alpha and Beta power block areas. Steam system tests were conducted in both Alpha and Beta power blocks. Both Alpha and Beta cooling towers cascaded water during December. MSP discharged water into a single evaporation pond in both Alpha and Beta in December. However, water remained in the unused basin in Beta from both earlier testing and rain water. On December 23, 2014, Abeinsa (AEPC) turned the site over to Abengoa to manage facility operations.

---

In both Alpha and Beta, ground disturbance included various foundations, trenching and grounding during the first half of the month. Collector (trough) commissioning continued, and heat transfer fluid (HTF) was circulated through the solar fields and power blocks during defocus, and tracking/focus testing of collectors. Construction within the power blocks also included insulation installation and fire protection system. The facility also went through acceptance testing and start-up in preparation for operations.

Due to a reduction in staff, trash generation and removal slowed in December. Maintenance of desert tortoise guards and exclusion fences occurred on an as-needed basis. The construction schedule includes day and night shifts during the regular work week and limited shifts on weekends.

### **2.1.1 Desert Tortoise Exclusion Fence Repairs**

In December, biological staff made incidental weekly inspections of the perimeter desert tortoise exclusion fence in the course of conducting other required activities, which is more frequent than the comprehensive monthly fence inspections required by BIO-11 and the Biological Opinion. No new breaches were noted.

## **2.2 Rain Events**

Three rain events occurred in December. On December 3, 0.9 cm of rain was collected in the onsite rain gauge and resulted in significant standing water. A second significant rain event occurred on the evening of December 12 through the middle of the day on December 13. This event resulted in a large quantity of standing water and soil erosion throughout the site. The onsite rain gauge collected 1.0 cm of water. On December 17, the rain gauge collected 0.3 cm of water. Again, this storm created substantial standing water around the site. Gauge numbers are likely an underrepresentation of the actual precipitation due to windy conditions associated with the rain events. After each rain event a complete perimeter fence inspection was conducted and no breaches were found in the exclusion fence.

## **2.3 Hazardous Material Spills**

Three hazardous material spills were reported to biological staff in December for diesel and HTF. Abengoa provided immediate spill reports to the biological staff per BIO-7 requirements in December. Biological staff checked each spill and confirmed that the cleanup was sufficient to remove or reduce the risk to wildlife.

## **2.4 Non-compliance Notifications and Reports**

Biological staff issued two new non-compliance reports (NCR) in December, as well as an addendum to an unresolved NCR. The two new non-compliances were: NCR-9 issued for continued standing water issues and NCR-10 issued for the use of toxic substances<sup>1</sup>. On December 15, biological staff issued an amendment to NCR-5 for new trash management

---

<sup>1</sup> CEC formally rescinded NCR-10 by email issued January 13, 2015.

---

issues upon email request of CEC. Two NCRs, NCR-5 regarding trash and NCR-7 regarding unauthorized road use, are pending formal acceptance of CEC for the implementation of MSP-proposed resolutions.

#### **2.4.1 NCR-9: Standing Water**

On December 1, NCR-9 was issued for continued standing water located primarily within Alpha and Beta power blocks. The power block standing water issues were caused by leaking valves, broken tanks, cooling towers, and increased testing of fire suppression systems. One of the primary areas of concern was standing water resulting from the cascading of water in the cooling towers which, during wind events, can blow out of the structure before it reaches the catch basin. AEPC constructed earthen dams to collect water as it flowed away from the cooling towers. Upon daily notification from biological staff, construction personnel swept water around to disperse it or filled low spots with gravel in an attempt to restricted wildlife access to the standing water. However, no long-term fixes were implemented and temporary solutions were not adequate to remedy the problems. At the end of December, the standing water identified in the power blocks had not been addressed.

Standing water was also present after the rain events. Due to cool weather and decreased water evaporation, these areas persisted through December

#### **2.4.2 NCR-10: Use of a Toxic Substance**

On December 1, NCR-10 was issued for use of HTF-contaminated water applied for dust control on unpaved surfaces. The designated biologist was notified of this issue by security guards complaining of strong fumes emanating from water sprayed by dust control vehicles. Upon inspection of puddles and damp soil, the designated biologist detected that the fluid had the very characteristic odor of HTF, and gave off a very strong smell. At the time of the observation, the designated biologist notified Bureau of Veritas, AEPC H&S, and the emergency medical technician (EMT) who all corroborated that the water appeared to be contaminated with HTF. This violated BIO-7, Measure 6, which states: "Road surfacing and sealants as well as soil bonding and weighting agents used on unpaved surfaces shall be non-toxic to wildlife and plants." On December 10, AEPC submitted analytical results from the source of the water being applied to the roads showing there was no detectable level of HTF components and requested that CEC rescind this NCR. On January 13, 2015, Dale Rundquist CPM formally rescinded NCR-10 via email communication.

#### **2.4.3 NCR-5: Trash Resolution**

On December 15, an addendum to NCR-5 (initially filed on March 5, 2014) was issued to MSP by the Designated Biologist. This addendum was requested by CEC staff biologist Ann Crisp in response to non-compliance notification 6 (NCN-6) issued November 21, regarding disturbing wildlife. In the description of NCN-6, biological staff noted that coyotes (*Canis latrans*) were observed foraging on trash and food waste that was not contained in closed receptacles.

---

Despite improvements to trash disposal, NCR-5 remained unresolved in December. AEPC and Abengoa were still working to achieve trash management objectives specified in the NCR-5 resolution. Food-related trash is still providing subsidies to wildlife and project-related trash has blown onto the BLM-managed Harper Dry Lake Area of Critical Environmental Concern (ACEC). Biological staff has notified MSP personnel of the ongoing trash issues. NCR-5 is pending formal acceptance of CEC for the implementation of MSP proposed resolutions.

#### **2.4.4 NCR-7: Unauthorized Road Use Resolution**

On May 16, the CEC accepted the resolution requiring MSP to staff additional security guards at locations where unauthorized road use was occurring, provided that they are sent daily and weekly summary notifications of any unauthorized road use. On August 5, during a CEC site visit, Staff Biologist Ann Crisp agreed to decrease reporting for NCR-7 to the MCR (if no violations are observed) and resume daily reporting if any infractions occur. No unauthorized road use was observed in December.

#### **2.5 Desert Tortoise**

In December, no construction activities required desert tortoise clearance surveys. No tortoises were observed within the boundaries of MSP or in the project vicinity.

#### **2.6 Invasive Weeds**

In December, three invasive weeds were observed. London rocket (*Sisymbrium irio*) and tamarisk (*Tamarix ramosissima*) are a target invasive weeds observed during preconstruction surveys and identified in the project's *Tamarisk Eradication, Monitoring and Reporting Program* (Tamarisk Plan). An additional species, iceplant (*Carpobrotus edulis*), which was not observed during preconstruction surveys but meets the Tamarisk Plan's definition of an invasive species, was also observed in December. The Tamarisk Plan's definition of an invasive species is that it is included in the California Invasive Plant Council's (Cal-IPC) "high" or "moderate" dispersal or establishment rating.

London rocket is an annual species and only the old stalks from spring 2014 were observed. One tamarisk tree was observed re-sprouting from roots at a known location in Beta power block. This individual was not removed in December.

Iceplant is a succulent perennial and was observed actively growing in the Alpha power block. This species occurs primarily in coastal habitats and is not likely to cause significant establishment risk once removed. Two other weed species, Russian thistle (*Salsola tragus*) and fivehook bassia (*Bassia hyssopifolia*), were also observed onsite. Both of these species have only one of the Cal-IPC dispersal or establishment ratings as "high" or "moderate." According to the BIO-16 Tamarisk Plan, and guidance provided by CEC staff biologist Ann Crisp via email on May 28, 2014, these two species are considered "exotic;" and exotic species must infest less than 5 percent of MSP for BIO-16 to meet its success criteria goals. In addition to having exotic species in less than 5 percent of the area at MSP, the overall site expectation from the Tamarisk Plan is that the site will be devoid of vegetation during

---

operations. Therefore, all target noxious weeds and other exotic plant species will ultimately need to be removed.

AEPC or Abengoa did not conduct any weed management activities in December.

## **2.7 Kit Fox and Other Mammals**

As of the end of December, there are two active kit fox shelter sites within two exclusion buffers, DKF Site #8 and #9 (Figure 2). DKF Site # 8 is located in a construction laydown area near the north boundary of Alpha West. DKF Site # 9 is located near the diversion channel in a relatively unused area on the southeast corner of the Alpha East solar field.

Biological staff inspected the integrity of the two exclusion buffers and downloaded the photos from the motion-sensor cameras. Cameras recorded consistent activity by at least two kit foxes in December. Biological staff received numerous reports of kit foxes observed throughout site by construction personnel, but the locations were not specific enough to be mapped. Biological staff also observed direct and indirect observations of kit fox activity at the shelter sites in December.

Biological staff monitored all activities within the exclusion buffers throughout December. Prior to working within the buffer areas, construction crews signed a protocol verifying their understanding of correct procedure within an exclusion buffer. Additionally, all construction crews were verbally briefed before entering the buffer.

A pair of coyotes has been observed on MSP on a near-daily basis foraging on garbage and moths that are attracted to generator lights. Despite improvements in garbage containment in December, the coyotes appear to be habituated to human presence and remain a constant presence.

## **2.8 Nesting Birds**

No nesting bird behavior was observed throughout the site in December.

## **2.9 Raven Monitoring, Management, and Control**

Common raven monitoring activities continued on the MSP site per BIO-18 and as outlined in the *Common Raven Monitoring, Management and Control Plan*. The December Monthly Common Raven Monitoring Results report provides information on monitoring activities, survey methods, maps, incidental raven observations, point count survey results, and datasheets (Attachment 3).

## **2.10 Wildlife Injuries and Mortalities**

### **2.10.1 Migratory Bird Treaty Act Protected Species**

Biological staff had two encounters with MBTA-protected species at MSP in December.

On December 9, the biological monitor found the remains of an American coot (*Fulica americana*) near the base of a mirror support in Alpha East (Figure 2). The biological

---

monitor had been prompted by a construction worker reporting seeing a pair of coyotes carrying a “duck” out of the Alpha evaporation ponds. The only intact remains were the tips of both wings and a few chunks of skin with feathers attached. The carcass was placed in MSP’s onsite freezer for collection by the USFWS’s Office of Law Enforcement (OLE). The death of this individual prompted a discussion between MSP and CEC regarding whether or not this should count towards BIO-19 adaptive management trigger.

On December 31, biological staff found a dead American coot on south shoulder of Lockhart Road near Beta West (Figure 2). It is suspected that the cause of death was from a collision with the overhead transmission line. A common raven was observed scavenging the carcass. The head was missing and likely removed by the raven. The carcass was placed in MSP’s onsite freezer for collection by the USFWS’s OLE.

### **2.10.2 Special-status Species**

One special-status species was found dead in December. A kit fox (*Vulpes macrotis*) was found along the side of the Harper Lake Road on December 8 (Figure 2, inset). The individual was found approximately 5 miles south of the site along Harper Lake Road. The carcass showed no indication of vehicle collision but did have evidence of being predated on. The torso was removed, but the entire skin with limbs and skull was still intact and attached. There were no other outward signs of trauma. Biological staff suspected predation by felid or avian predator. There was no blood or any tracks surrounding the carcass and it is suspected that the carcass was transported to the location by the predator. The frozen carcass was sent to CDFW on December 11, 2014, for necropsy.

At the time of this MCR, CDFW did not yet have the necropsy results for the three kit foxes killed on June 28, August 18, or December 11, 2014. When the designated biologist receives the results from the necropsy, they will be reported in the MCR.

### **2.10.3 Other Species Mortalities**

On December 30, a black-tailed jack rabbit (*Lepus californicus*) was found dead in the western-most Alpha evaporation pond (Figure 2). The biological monitor was unable to recover the carcass due to its location in the pond. Upon returning to the pond later in the day, the rabbit was no longer visible and may have become lodged under floating debris in the pond or become water-logged and sunk. On January 1, biological staff was able to photograph and confirm the identification of the dead rabbit as a black-tailed jackrabbit as it blew to the edge of the ponds. However, before the biologist could get equipment to retrieve the rabbit from the pond, it disappeared again. Upon time of this report, the rabbit presumably is still within the pond.

## **2.11 Observed Species**

A list of wildlife species observed in December is included in Attachment 4. In addition to desert kit fox, several special-status species were observed at MSP:

- Bell’s Sparrow (*Artemisiospiza belli*), CDFW Watch List
- Le Conte’s Thrasher (*Toxostoma lecontei*), CDFW Species of Concern

- 
- Loggerhead Shrike (*Lanius ludovicianus*), CDFW Species of Concern
  - Northern Harrier (*Circus cyaneus*), CDFW Species of Concern
  - Peregrine Falcon (*Falco peregrinus anatum*), Federally and State Delisted, CDFW Fully Protected, USFWS Bird of Conservation Concern
  - Prairie Falcon (*Falco mexicanus*), CDFW Watch List

In previous MCRs, horned lark (*Eremophila alpestris*) was identified as a special-status species. Upon closer identification by qualified avian biologists, the species observed at MSP was not the special-status variety, California horned lark (*Eremophila alpestris actia*), which is a CDFW Watch List species. It was instead, the more widespread horned lark (*Eremophila alpestris*).

Three California invasive wildlife species were also observed at MSP: house sparrow (*Passer domesticus*), Eurasian collared dove (*Streptopelia decaocto*), and European starling (*Sturnus vulgaris*). House sparrows have taken up residence in the power blocks and have been observed foraging in the parking lots and solar fields on trash and weeds, using the cascading water in the cooling tower to bathe, and foraging on moths around the generator lights provided for night-time work.

### **3 Operations Monitoring**

#### **3.1 Evaporation Pond Monitoring**

During the transition between construction and operations phases of the project, CEC's Compliance Project Manager (CPM), Dale Rundquist, gave conditional approval for MSP to discharge water into the evaporation ponds without an approved Evaporation Pond Management and Monitoring Plan (Evaporation Pond Plan) in place. Conditions of this initial approval were that biological staff must implement draft monitoring protocols provided to CEC on July 21, which include biweekly avian point counts at evaporation ponds. CEC provided additional guidance to install and deploy deterrents in November after two birds were found dead within the evaporation ponds. On December 19, the CEC staff biologist Ann Crisp told the Designated Biologist via a phone call that the Evaporation Pond Plan compliance reports should not be incorporated into the MCR but should be submitted under separate cover.

The Evaporation Pond Plan had not been approved by CEC when this MCR was written.

# Certification of Completion Worker Environmental Awareness Program Mojave Solar Project (09-AFC-5)

12/9

This is to acknowledge these individuals have completed a mandatory California Energy Commission-approved Worker Environmental Awareness Program (WEAP). The WEAP includes pertinent information on biological, cultural, and paleontological resources for all personnel (that is construction supervisors, crews, and plant operators) working on site or at related facilities. By signing below, the participant indicates that he/she understands and shall abide by the guidelines set forth in the program materials. Include this completed form in the Monthly Compliance Report.

| No. | Employee Name     | Title/Company      | Signature                |
|-----|-------------------|--------------------|--------------------------|

# Certification of Completion Worker Environmental Awareness Program Mojave Solar Project (09-AFC-5)

12/2

This is to acknowledge these individuals have completed a mandatory California Energy Commission-approved Worker Environmental Awareness Program (WEAP). The WEAP includes pertinent information on biological, cultural, and paleontological resources for all personnel (that is construction supervisors, crews, and plant operators) working on site or at related facilities. By signing below, the participant indicates that he/she understands and shall abide by the guidelines set forth in the program materials. Include this completed form in the Monthly Compliance Report.

### Certification of Completion Worker Environmental Awareness Program Mojave Solar Project (09AFC-5)

This is to acknowledge these individuals have completed a mandatory California Energy Commission-approved Worker Environmental Awareness Program (WEAP). The WEAP includes pertinent information on biological, cultural, and paleontological resources for all personnel (that is, crews, and plant operators) working on site. By signing below, the participant indicates that he/she understands and shall abide by the guidelines set forth in the program materials.

## 1.0 Introduction

The Abengoa Mojave Solar Project (MSP) is required to provide a monthly report on common ravens (*Corvus corax*) to the California Energy Commission (CEC), United States Fish and Wildlife Service (USFWS), and California Department of Fish and Wildlife (CDFW). The CEC Final Decision includes Condition of Certification BIO-18 stating that the project owner shall implement control measures to manage its construction site and related facilities in a manner to control raven populations and to mitigate cumulative and indirect impacts to desert tortoise associated with regional increase in raven numbers. In accordance with BIO-18, the CEC approved the *Common Raven Monitoring, Management, and Control Plan* (Raven Plan) on March 26, 2012. Refer to BIO-18 and the Raven Plan for monitoring and survey protocol description.

## 2.0 Construction Monitoring Activities

The following section summarizes biological monitoring activities conducted by CH2M HILL throughout December 2014.

On a typical weekday, one biological monitor or designated biologist:

- Monitors Harper Dry Lake Road prior to increased traffic levels during morning and evening shift changes. Biological staff monitored the road on a more frequent basis as necessary.
- Monitors active construction areas, parking lots, laydown yards, and any areas of potential threat to vegetation, soils, or wildlife;
- Monitors the evaporation ponds several times a day;
- Inspects desert tortoise exclusion fences and tortoise guards as required;
- Inspects potential entrapment areas (e.g., trenches, vaults, basins);
- Monitors for formation of potential standing water;
- Inspects kit fox exclusion buffers and downloads photos from motion-sensor cameras at shelter sites;
- Conducts raven observations and bi-weekly point-count surveys;
- Conducts point counts at evaporation ponds and adjacent wetlands;
- Investigates reports of hazardous waste spills;
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches above the ground surface; and
- Performs other special biological-resources-related activities, as required.

## 3.0 Methods

The designated biologist ensures that the biological monitors are trained to implement the Raven Plan in both raven monitoring and management measures. Biological staff also conducts 10-minute stationary point count surveys at seven locations around the site

---

(Supplement 1). The purpose of the point counts is to record raven observations including date, time, location, number of individuals, age, behavior, distance from the station location, and any other pertinent notes (e.g., nesting behavior). This information is recorded on a hard copy datasheet. Point count surveys are conducted with a minimum of one week in between.

Point count surveys were positioned to monitor project-specific activities and features that have potential to attract or subsidize ravens. The Raven Plan defines six “conditions of concern” as:

1. Availability of water from evaporation ponds;
2. Potential creation of new perching/roosting/nesting sites for ravens;
3. Temporary water ponding potential from dust suppression associated with construction, operation, and maintenance;
4. Raven food sources from soil disturbance (rodents, insects, etc.) and road kill associated with construction activity;
5. Human food and waste management; and
6. Landscaping that could provide foraging, perching, and available water opportunities.

During daily monitoring activities, biological staff records incidental observations of ravens interacting with MSP. This includes any raven observation within site boundaries, flying overhead, or adjacent to the site. These observations are recorded in field notebooks and include date, general site location, global positioning system (GPS) location, number of individuals, and activity. The GPS information is also presented on a map.

The incidental observations are also used to identify potential problem areas. Problem areas are those requiring management actions. If a problem area is identified, the surveys will be increased to a weekly basis until the issue is resolved. Habitual perching sites will be identified and actions taken to discourage use. If hazing techniques are employed to discourage raven use, biologists will record information on date, time, location, habitat, number of individuals, and response to hazing. Potential or active raven nests will be documented and removed according to Raven Plan specifications. Biological staff will report on whether control measures are working and provide further recommendations in the biological monthly compliance report.

## **4.0 Results**

### **Incidental Observations**

In December, ravens were observed foraging on food waste in the power block and solar fields, as well as drinking and bathing in construction-related supplemental water sources. Ravens were observed in December drinking from pooled water that blows off the cascading cooling towers on a regular basis. Construction staff was notified of these issues and biological staff continues to monitor the situation.

During biological monitoring, 43 ravens were incidentally observed during 28 separate observations (Table 1). Because ravens are indistinguishable from one another, multiple sightings of individual birds are likely to occur. Therefore, the number of observations does

not reflect the number of individual birds onsite. Common ravens were observed throughout the site (Supplement 2). The most commonly observed raven behaviors were flying overhead or perched on project structures. Many ravens were observed in Alpha power block, as well as the Alpha and Beta evaporation ponds. Ravens were observed perched on fences and various transmission line poles, but were not using a habitual perch location.

### **Point Count Surveys**

In December, two biweekly point count surveys were conducted in accordance with the Raven Plan protocol. Point count surveys were conducted on December 14 and December 31, 2014. On December 14, one raven was observed at station 2. On December 31, two ravens were observed—one at station 2 and one at station 5. Point count observations did not document any nesting behavior or problem areas. The Common Raven Fixed Point Observation Data Sheets are provided in Supplement 3. Table 2 provides a summary of point count observations.

### **Nest Monitoring**

According to the Raven Plan, biweekly breeding raven nest surveys were not required in December. These surveys will commence again in March 2015.

<sup>b</sup> Source of special-status species status is CDFW Natural Diversity Database. September 2014. Special Animals List. Periodic publication. 52 pp

<sup>c</sup> Qualified avian biologist confirmed that the species of horned lark is not the special-status variety California Horned Lark (*Eremophila alpestris actia*), but the more common horned lark (*Eremophila alpestris*).

Status Codes:

Federal:

FE = Federally listed endangered: species in danger of extinction throughout a significant portion of its range

FT = Federally listed, threatened: species likely to become endangered within the foreseeable future

BCC = USFWS Bird of Conservation Concern

State:

SE = State listed as Endangered

ST = State listed as Threatened

CSC = California Species of Special Concern Species of concern to CDFW because of declining population levels, limited ranges, and/or continuing threats have made them vulnerable to extinction.

CCR = protected by the California Code of Regulations

FP = Fully Protected

WL = Watch List

Subject: Abengoa Mojave Solar Project (09-AFC-5C)  
Monthly Compliance Report CUL-1 and CUL-6

Dear Mr. Rundquist:

CH2M HILL is assisting Abengoa Solar LLC. (Abengoa) in complying with California Energy Commission (CEC) Conditions of Certification, specifically, CUL-1 and CUL-6, for cultural resource monitoring, as set forth in the Commission Decision for the Mojave Solar Project (MSP). This report covers the cultural resources monitoring conducted from December 1, 2014 through December 31, 2014 by CH2M HILL.

### **Personnel Active in Cultural Monitoring This Period**

The Cultural Resources Monitors (CRM) were Sonia Sifuentes and Kurt Lambert and the Native American Monitors (NAM) were David Perezchica, Howie Diaz, and Joseph Lente. The monitoring program was directed by Cultural Resource Specialist (CRS) John Dietler and Alternate CRS Phillip Reid.

### **Monitoring and Associated Activities This Period**

Ground-disturbing activities subject to cultural resource monitoring during this reporting period included grounding rod box installation, conduit repair, and sidewalk excavations, along with heat transfer fluid spill cleanups, in Beta Power Block and Beta East. In Alpha Power Block and Alpha East, monitored activities included excavation for conduit repair, grounding rod box installation, bollard placement, sidewalk extension, and for the guard card readers. Grounding rod boxes were also installed at the Water Treatment Plant.

### **Cultural Resources Discoveries This Period**

None.

### **Anticipated Changes in the Next Period**

Monitoring will continue for various small excavations such as foundations, electrical trenching, drainages, and other activities. A cultural monitoring crew will remain onsite to continue monitoring and to respond to discoveries if they occur.

### **Comments, Issues or Concerns**

#### Non-Compliance Reports

None.

#### Non-Compliance Resolutions

None.

#### Outstanding

NCR No. 11 was issued on August 21, 2014. Per direction of the CEC CPM, the recommended resolutions were revised on August 22, 2014. The CEC requested to review the modified resolutions prior to re-issuance to the Project Owner. Formal re-submittal of the NCR with revised resolutions is pending CEC CPM and Staff Archaeologist review and concurrence.

Sincerely,

A handwritten signature in black ink, appearing to read "John Dietler". The signature is fluid and cursive, with a long horizontal stroke at the end.

RE: PAL-5, Summary of Paleontological Monitoring and Mitigation Activities at  
the Mojave Solar Project (MSP) for the period of December 2014

Dear Mr. Rundquist:

This letter is to confirm SWCA Environmental Consultants paleontological monitoring and mitigation activities at the MSP site during the period of December 1 through December 31, 2014. As of February 28, 2014, major ground-disturbing activities for the MSP had been completed and SWCA's monitoring services were no longer required onsite. No paleontological monitoring occurred during the above-referenced period.

It has been a pleasure working with you on this project. If you have any questions please do not hesitate to contact me at 626 240 0587 ext 6605 or at ccorsetti@swca.com.

Respectfully,

A handwritten signature in black ink, appearing to read "Cara Corsetti".

Cara Corsetti, M.S.

Monthly Compliance Report  
San Bernardino County, California**

**December 2014 Reporting Period**

## **Monthly Safety Inspection Report**

Larry Davis, Mojave Solar Project Safety Manager  
December, 2014

### **Record of all employees trained for the month**

Worked **6,220,513** hours project to date with **87** recordable incidents. **9,502** new employee orientations completed to date. **7,172** visitor safety orientations completed to date. **10** new employee orientations were completed in the month of December.

### **Summary report of safety management actions and safety-related incidents that occurred:**

- **H&S continues to audit H&S incidents and injuries including follow up corrective actions.**
- **Alpha and Beta power blocks cleared of all construction material.**
- **The plant was turned over to Abengoa Solar on December 22, 2014.**
- **Security was also turned over to Abengoa Solar.**
- **This report is current up to December 22, 2014.**

Safety management actions included WEAP and new employee orientation training and safety committee meetings.

### **Report of accidents and injuries that occurred during the month of December:**

**One Recordable** was incurred in the month of December 2014, one LWDC.

#### **Case #1: 12/14/2014 – Abacus, Classified as RWDC**

- **Worker was struck in the face area with a pipe that was stuck to the perimeter fence. Worker was attempting to remove the pipe from fence.**

**No report of any continuing or unresolved situations and incidents that may pose danger to life or health.**

Construction has worked **6,220,513** hours with **87** recordable cases.

Total Recordable Incident Rate, (TRIR), for Project in the month of December is **5.58%**

Total Recordable Incident Rate, (TRIR), for year to date is **2.95%**

Total Recordable Incident Rate, (TRIR), for Project to date is **2.80%**

Total Lost Work day cases- **16**, Lost Work days total – **1,098**

|          |                                                                                                                                                      |               |  |   |                 |  |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|--|---|-----------------|--|
| 5        | Is there a safe means of access to platform provided?                                                                                                |               |  | 3 |                 |  |
| 6        | Are the wheels locked on rolling units when platform occupied?                                                                                       |               |  | 3 |                 |  |
| 7        | Are the scaffolds at least 10 ft. from energized power lines?                                                                                        |               |  | 3 |                 |  |
| 8        | Are the workers tied off in articulating boom lift?                                                                                                  |               |  | 3 |                 |  |
| 9        | Is the aerial lift on level surface?                                                                                                                 |               |  | 3 |                 |  |
| 10       | Has safety been notified in advance of erecting a suspended scaffold?                                                                                |               |  | 3 |                 |  |
| 11       | Is there a competent Scaffold Person inspected and signed-off on scaffold prior to each shift daily?                                                 |               |  | 3 |                 |  |
| 12       | Is a Tagging system used?                                                                                                                            |               |  | 3 |                 |  |
| <b>F</b> | <b>Excavations &amp; Trenches – OSHA Subpart P</b>                                                                                                   | <b>Values</b> |  |   | <b>Comments</b> |  |
| 1        | Is there a competent Person, designated in writing, assigned to supervise operations and conduct documented daily inspections and on site full time? |               |  | 3 |                 |  |
| 2        | Are all excavations and trenches 5 ft. or greater in depth equipped with Protective Systems (shoring/shielding or sloped/benched)?                   |               |  | 3 |                 |  |
| 3        | Are the ladders or other means of quick exit within 25 ft. of lateral travel for workers?                                                            |               |  | 3 |                 |  |
| 4        | Is the Spoil pile at least 3 ft. from edge of excavation or trench?                                                                                  |               |  | 3 |                 |  |
| 5        | Are the Underground utilities located & marked before excavation starts? (Verify ticket/maps/plans)                                                  |               |  | 3 |                 |  |
| 6        | Are the barricades provided around all open excavations?                                                                                             |               |  | 3 |                 |  |
| 7        | Is the Equipment kept at proper distance from occupied excavations/trenches to minimize risk of cave-in or equipment falling in on workers?          |               |  | 3 |                 |  |
| 8        | IF 20' OR DEEPER Has Safety been notified?                                                                                                           |               |  | 3 |                 |  |
| 9        | IF 20' OR DEEPER, are the protective systems designed by a RPE?                                                                                      |               |  | 3 |                 |  |
| 10       | Are the Surface and subsurface encumbrances identified?                                                                                              |               |  | 3 |                 |  |
| 11       | Are the Water, atmospheric conditions, & surcharge loads considered?                                                                                 |               |  | 3 |                 |  |
| <b>G</b> | <b>Motor Vehicles, Mechanized Equipment – OSHA Subpart</b>                                                                                           | <b>Values</b> |  |   | <b>Comments</b> |  |
| 1        | Are the Tractors, backhoes, other vehicles equipped with operable backup alarms?                                                                     |               |  | 3 |                 |  |
| 2        | Are the Operators required wearing seat belts when provided on equipment?                                                                            |               |  | 3 |                 |  |
| 3        | Is the Forklift/Lull operator certification documented and available on project?                                                                     |               |  | 3 |                 |  |
| 4        | Is a High visible vest worn around earth moving equipment?                                                                                           |               |  | 3 |                 |  |
| <b>H</b> | <b>Electrical – OSHA Subpart K</b>                                                                                                                   | <b>Values</b> |  |   | <b>Comments</b> |  |

## Safety Conditions Check List

### Internal by Work Site

|          |                                                                                                                                                                  |               |   |   |                 |                                                           |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|---|---|-----------------|-----------------------------------------------------------|
| 1        | Are the Ground fault circuit interrupters (GFCI) used with all temporary wiring, e.g., extension cords and power from welding machines?                          |               |   | 3 |                 |                                                           |
| 2        | Is the GFCI in good appearance and in working order?                                                                                                             |               |   | 3 |                 |                                                           |
| 3        | Are All tools and equipment inspected for defects in cords and plugs?                                                                                            |               |   | 3 |                 |                                                           |
| 4        | Are the Extension cords and ground pins are in good condition?                                                                                                   |               | 2 |   |                 | Two Abacus extension cords were found with no ground pin. |
| 5        | Are the Sources of electricity, such as energized panel boxes, overhead lines, etc., properly marked, barricaded and protected? Inspected by a Qualified Person? |               |   | 3 |                 |                                                           |
| 6        | Is there an adequate lockout/tag out/try out procedures in place to protect employees?                                                                           |               |   | 3 |                 |                                                           |
| 7        | Is the Temporary Lighting installed properly? (i.e. parking, construction trailer, & site)                                                                       |               |   | 3 |                 |                                                           |
| <b>I</b> | <b>Personal Protective Equipment – OSHA Subpart E</b>                                                                                                            | <b>Values</b> |   |   | <b>Comments</b> |                                                           |
| 1        | Is an adequate eye protection available and worn when required?                                                                                                  |               |   | 3 |                 |                                                           |
| 2        | Is a Hearing protection available and used when necessary?                                                                                                       |               |   | 3 |                 |                                                           |
| 3        | Are Hard hats available and worn at all times?                                                                                                                   |               |   | 3 |                 |                                                           |
| 4        | Are Work boots with protective toes worn by all employees?                                                                                                       |               |   | 3 |                 |                                                           |
| 5        | Are All employees wearing shirts with sleeves?                                                                                                                   |               |   | 3 |                 |                                                           |
| 6        | Is a Hand protection available and in use when required?                                                                                                         |               |   | 3 |                 |                                                           |
| 7        | Is there a Written respirator program available?                                                                                                                 |               |   | 3 |                 |                                                           |
| 8        | Are they Using N95 respirators for "voluntary use"?                                                                                                              |               |   | 3 |                 |                                                           |
| 9        | Are the PFAS inspected by employees prior to use?                                                                                                                |               |   | 3 |                 |                                                           |

January 13, 2014

Mr. Dale Rundquist, CPM  
California Energy Commission  
1516 Ninth Street (MS-2000)  
Sacramento, CA 95814  
[drundqui@energy.state.ca.us](mailto:drundqui@energy.state.ca.us)

Dear Mr. Rundquist,

As required by the California Energy Commission and more specifically by Condition of Certification COMPLIANCE-5, attached please find an update to the following Compliances:

## **COMPLIANCE-2 [ASI + A/T]**

The project owner shall maintain project files on-site or at an alternative site approved by the CPM for the life of the project, unless a lesser period of time is specified by the Conditions of Certification. The files shall contain copies of all "as-built" drawings, documents submitted as verification for Conditions, and other project-related documents. Energy Commission staff and delegate agencies shall, upon request to the project owner, be given unrestricted access to the files maintained pursuant to this Condition.

**Hardcopy files of all "as-built" drawings and documents are available for review at the Abeinsa EPC Alpha west main site trailer.**

## **COMPLIANCE-5 [ASI + A/T]**

A compliance matrix shall be submitted by the project owner to the CPM along with each monthly and annual compliance report. The compliance matrix is intended to provide the CPM with the current status of all Conditions of Certification in a spreadsheet format. The compliance matrix must identify:

1. The technical area;
  2. The Condition number;
  3. A brief description of the verification action or submittal required by the Condition;
  4. The date the submittal is required (e.g., 60 days prior to construction, after final inspection, etc.);
  5. The expected or actual submittal date;
  6. The date a submittal or action was approved by the Chief Building Official (CBO), CPM, or delegate agency, if applicable; and
  7. The compliance status of each Condition, e.g., "not started," "in progress" or "completed" (include the date).
  8. If the Condition was amended, the date of the amendment.
- Satisfied Conditions shall be placed at the end of the matrix.

**The Compliance Matrix has been included, please see attachment.**

## **COMPLIANCE-6 [ASI + A/T]**

The first Monthly Compliance Report is due one month following the Energy Commission business meeting date upon which the project was approved, unless otherwise agreed to by the CPM. The first Monthly Compliance Report shall include the AFC number and an initial list of dates for each of the events identified on the Key Events List found at the end of this section of the Decision.

**The Key Events list has been included with current completed activity dates listed, please see attachment. This letter satisfies this compliance as well.**

## **AIR QUALITY PERMIT**

Air Quality permit amendment was submitted to MDAQMD on 10/19/2013. MDAQMD approved on 02/24/2014. MDAQMD submitted this approval to the CPM on 02/24/2014, MDAQMD submitted revised ATC to CPM on 03/14/2014. CPM provided revised conditions of certification on 03/21/2014. CPM staff review and public comment period took place on 04/22/2014, CEC approved air quality permit revision. CEC issued revised air quality permits on 04/28/2014.

### **AQ-12**

Specifications for the Ullage Venting System were approved by CPM on 06/10/2014 and MDAQMD on 05/28/2014.

### **AQ-25**

Approval of the TDS Meter specifications and calibration results submitted to MDAQMD and CEC on 10/31/2014, CEC approved on 11/05/2014.

AQ-32

Hour meter for diesel fuel emergency backup generator submitted to CPM and MDAQMD on 05/20/2014.

AQ-43

Hour meter for diesel fuel emergency backup generator for fire pumps submitted to CPM and MDAQMD on 04/20/2014.

AQ-54

The project owner shall notify the District at least 10 days prior to performing the required tests. The test results shall be submitted to the District within 30 days of completion of the tests and shall be made available to the CPM if requested.

Vapor Recovery system installation and testing occurred on 09/04/2014. AQ-54-00-00 submitted to MDAQMD and CPM on 10/01/2014, please see attachment. MDAQMD added results to their files on 10/02/2014. CEC approved package on 11/13/2014.

AQ-64

Carbon Absorption System monitoring and change-out plan submitted to MDAQMD and CPM on 06/25/2014. Plan resubmitted to MDAQMD and CPM on 07/25/2014, MDAQMD approved on 08/06/2014. CPM approved on 09/05/2014.

AQ-67

AQ-67-00-00, Carbon Adsorption System VOC Monitoring procedure submitted to MDAQMD and CPM on 10/27/2014. MDAQMD issued non-objection on 10/30/2014, CEC approved on 11/13/2014.

**HAZ-1 [ASI and A/T]**

The project owner shall not use any hazardous materials not listed in Appendix A (Hazardous Materials Proposed for Use at AMS During Operations), below, or in greater quantities or strengths than those identified by chemical name in Appendix A (Hazardous Materials Proposed for Use at AMS During Operations), below, unless approved in advance by the Compliance Project Manager (CPM). The project owner shall provide to the CPM, in the Annual Compliance Report, a list of hazardous materials contained at the facility. **Diesel fuel and gasoline were the only hazardous chemicals delivered during the month. No HTF deliveries were made for the month. The Beck Oil (tickets) and summary for December 2014 are included, please see attachments.**

**HAZ-2 [ASI and A/T]**

At least 60 days prior to receiving any hazardous material on the site for commissioning or operations, the project owner shall provide a copy of a final Hazardous Materials Business Plan (HMBP), Spill Prevention, Control, and Countermeasure (SPCC) Plan, and a Process Safety Management (PSM) Plan to the CPM for approval.

The HMBP was submitted to the CPM and San Bernardino Fire Department on 07/23/2013. The CPM and SBCFD Haz Mat Division approved the HMBP on 08/01/2013 and 10/09/2013 respectively. The SPCC and PSM plans were submitted to the CPM on 10/29/2013, and SBCFD Haz Mat Division on 11/01/2013. The plans were approved by SBC Haz Mat Division as they stated that their only requirement is to have a copy of the SPCC on file at the site should a representative visit. The SPCC was approved by CPM on 11/25/2013. The PSM plan was returned with comments on 12/09/2013. Revised PSM plan, PHA, LOPA and O&M Manuals were resubmitted to the CPM on 01/29/2014, CEC approved on 02/10/2014. The HTF End Loop Testing procedure was submitted to the CPM on 01/17/2014, CPM approved on 01/27/2014. SBCFD provided comments to the SPCC on 02/13/2014. Comments were addressed and submitted to CPM on 02/28/2014, please see attachment. CPM comments for the PSM plan were addressed and submitted to CPM on 01/27/2014. CPM approved PSM plan on 02/10/2014, please see attachment. HMBP was resubmitted on 03/26/2014 to include the hydrogen and CO2 for the turbine cooling system, CEC approved on 04/16/2014, please see attachments. Submittal for steam generator chemical pipe cleaning procedure submitted to CPM on 04/23/2014. Location map showing storage locations of chemical pipe cleaning chemicals submitted to CPM on 04/25/2014, please see attachments. Conditional approval of Chemical Pipe Cleaning process approved by CEC on 04/29/2014. SBC permit to place baker tanks in Harper Lake Road right-of-way for the chemical pipe cleaning submitted to SBC on 03/17/2014, SBC approval on 03/20/2014. HAZ-2-04-00, the revised Hazardous Materials Business Plan (HMBP) was submitted to CPM on 05/01/2014, CPM approved 05/02/2014. HAZ-2-07-00, the revised Hazardous Materials Business Plan (HMBP) was submitted on 07/11/2014 and approved by the CPM on 08/21/2014.

## **WASTE-2 [ASI and A/T]**

Project owner shall keep a copy of the identification number on file at the project site and provide documentation of the hazardous waste generation notification and receipt of the number to the CPM after receipt of the number. Waste generator number issued by California EPA on September 28, 2012. CEC reviewed and approved submittal on November 27, 2012. The application for the USEPA hazardous waste generation notification number was submitted on July 9, 2013. EPA approval issued on 10/02/2013.

**WASTE-10 [ASI and A/T]**

The project owner shall document all releases and spills of HTF as described in Condition of Certification **WASTE-9** and as required in the **Soil & Water Resources** section of this Decision. Cleanup and temporary staging of HTF-contaminated soils shall be conducted in accordance with the approved Operation Waste Management Plan required in Condition of Certification of **WASTE-6**. The project owner shall sample HTF-contaminated soil in accordance with the United States Environmental Protection Agency's (USEPA) current version of "Test Methods for Evaluating Solid Waste" (SW-846). Samples shall be analyzed in accordance with USEPA Method 1625B or other method to be reviewed and approved by DTSC and the CPM.

Within 28 days of an HTF spill the project owner shall provide the results of the analyses and their assessment of whether the HTF-contaminated soil is considered hazardous or non-hazardous to DTSC and the CPM for review and approval. If DTSC and the CPM determine the HTF-contaminated soil is considered hazardous it shall be disposed of in accordance with California Health and Safety Code (HSC) Section 25203 and procedures outlined in the approved Operation Waste Management Plan required in Condition of Certification **WASTE-9** and reported to the CPM in accordance with Condition of Certification **WASTE-12**. If DTSC and the CPM determine the HTF-contaminated soil is considered nonhazardous it shall be retained in the land farm and treated on-site in accordance with the Waste Discharge Requirements contained in the **Soil & Water Resources** section of this Decision.

The HTF contaminated soil samples have been submitted to a testing lab. Lab results submitted to the CPM on 04/25/2014 and to DTSC on 05/09/2014. CPM approved on 05/22/2014 and DTSC on 05/09/2014. HTF contaminated soil sample lab results resubmitted to CEC after testing for biphenyl and diphenyl on 07/09/2014, CPM approved on 08/04/2014. **A hazardous spill report summary and the spill reports for December 2014 have been provided, please see attachments.**

**WASTE-11 [ASI and A/T]**

The project owner shall ensure that the cooling tower basin sludge is tested pursuant to Title 22, California Code of Regulations, and section 66262.10 and report the findings to the CPM. The handling, testing, and disposal methods for sludge shall be identified in the Operation Waste Management Plan required in Condition of Certification **WASTE-9**. The project owner shall report the results of filter cake testing to the CPM within 30 days of sampling. If two consecutive tests show that the sludge is non-hazardous, the project owner may apply to the CPM to discontinue testing. The test results and method and location of sludge disposal shall also be reported in the Annual Compliance Report required in Condition of Certification

WASTE-9. WASTE-11-01-00 Submittal for filter cake testing for Alpha WTP submitted to CPM on 11/17/2014.

## **WORKER SAFETY-1**

The project owner shall submit to the Compliance Project Manager (CPM) a copy of the Project Construction Safety and Health Program containing the following:

- A Construction Personal Protective Equipment Program;
- A Construction Exposure Monitoring Program;
- A Construction Injury and Illness Prevention Program;
- A Construction heat stress protection plan that implements and expands on existing Cal OSHA regulations as found in 8 CCR 3395;
- A Construction Emergency Action Plan; and
- A Construction Fire Prevention Plan.

The Personal Protective Equipment Program, the Exposure Monitoring Program, the Heat Stress Protection Plan, and the Injury and Illness Prevention Program shall be submitted to the CPM for review and approval concerning compliance of the program with all applicable safety orders. The Construction Emergency Action Plan and the Fire Prevention Plan shall be submitted to the San Bernardino County Fire Department (SBCFD) for review and comment prior to submittal to the CPM for approval. **Verification:** At least 30 days prior to the start of construction, the project owner shall submit to the SBCFD a copy of the Construction Fire Prevention Plan and Emergency Action Plan for review and comment and a copy of the Project Construction Safety and Health Program to the CPM for review and approval.

WKSF-01-03-00, Lightning Mitigation plans for TCO submitted to CPM on 11/07/2014. CPM returned with comments on 11/12/2014, WKSF-01-03-01 Submitted to CPM on 11/13/2014, CPM approved on 11/14/2014.

WKSF-01-04-00, Lightning Mitigation plans for TCO submitted to CPM on 11/07/2014. CPM returned with comments on 11/12/2014, WKSF-01-04-01 Submitted to CPM on 11/13/2014, CPM approved on 11/14/2014.

## **WORKER SAFETY-2**

At least 30 days prior to the start of commissioning, the project owner shall submit to the SBCFD the final Operations Fire Prevention Plan and Emergency Action for review and the final Project Operations and Maintenance Safety and Health Program to the CPM for approval. Health & Safety, Fire Prevention and Emergency Response plans for operations submitted to SBCFD and CPM on 02/14/2014, please see attachments. SBCFD issued comments on 02/26/2014, comments addressed and resubmitted to CPM on 02/26/2014. CPM issued comments on 03/03/2014, package resubmitted on 03/05/2014, please see attachment. CPM approved package on 03/10/2014, please see attachment. CPM clarified its approval of this compliance on 03/25/2014. **WKSF-2-01-00 Emergency Response plan revision 2 to include the lightning mitigation plan submitted to CEC on 11/18/2014, CEC approved plan on 12/04/2014, please see attachment.**

## **SOIL&WATER-1**

# ABENER TEYMA MOJAVE

13911 Park Avenue, Suite 208  
Victorville, CA 92392  
Phone: 480-287-1419

Provide an analysis on the effectiveness of the drainage, erosion, and sediment control measures and the results of monitoring and maintenance activities.

**Please see the attached Construction Site Stormwater Runoff Control Inspection forms. The contractor reports as of December 31, 2014 that 0 lf (24,730 lf total for project) of straw rolls and 0 lf (16,219 lf total for project) of new swale have been installed for this month, maintenance required for this month included cleaning all waddles running north/south in Alpha East due to sand buildup. The existing fiber rolls and swales continued being monitored, maintained, and replaced as needed. These BMP's were effective in preventing sediment run off from the site. There are two concrete washout stations (1 in Alpha and 1 in Beta). Additionally, the steel rumble strips remain in place at the Alpha east main entrance (north), Alpha east (south) entrance, Alpha west entrance, and on Lockhart Road adjacent to the TAB main entrance. They were effective in preventing dirt and mud from being tracked from the site onto Harper Lake Road and Lockhart Road as well as an effective deterrent against the spreading of noxious weeds. The steel beams are continuously maintained to prevent clogging. Street sweeping of the construction entrances and Harper Lake Road and Lockhart Road is occurring on an as needed basis as a means of good housekeeping; it has improved and will continue to be the main activity to keep the streets free of dirt and mud, especially when high winds and storm events occur. Soil stabilizer wasn't used for this month on traffic areas as daily watering was an effective means for dust control. Project site areas for the month that have been stabilized are 0 acres for Alpha East (279.50 acres total), 0 acres in Alpha West (369 acres total), 0 acres in Beta East (502 acres total), and 0 acres in Beta West (102.50 acres total). No sand build-up was reported in the retention basins between collectors. Trash collection became an issue, as there were changes in personnel and a new crew was assigned to the task. It is now back on track and being taken care of daily. Notification to the subcontractors to clean up their own trash, especially any accumulating in the trenches, pipes and power block areas has been mentioned at the daily subcontractor meetings, especially now that trailers have been moved and accumulated trash underneath the trailers needed to be picked up. All site personnel have been instructed to not feed any on site wildlife, particularly coyotes, who have come onto the site looking for food. The DB should be contacted immediately should a coyote be spotted. Sand removal along tortoise fences was done daily. Please see attachments, which include the SWPPP Summary and weekly Construction Site Stormwater Runoff Control Inspection forms signed by the project QSP and the Bureau Veritas site inspector.**

## SOIL&WATER-2

The project owner shall comply with the Waste Discharge Requirements (WDRs) established in Soil and Water Resources Appendices C, D, and E for the construction and operation of the surface impoundments (evaporation ponds), land treatment units, and storm water management system. These requirements relate to discharges, or potential discharges, of waste that could affect the quality of waters of the state, and were developed in consultation with staff of the State Water Resources Control Board and/or the applicable California Regional Water Quality Control Board (hereafter "Water Boards"). It is the Commission's intent that these requirements be enforceable by both the Commission and the Water Boards. In furtherance of that objective, the Commission hereby delegates the

# ABENER TEYMA MOJAVE

13911 Park Avenue, Suite 208  
Victorville, CA 92392  
Phone: 480-287-1419

enforcement of these requirements, and associated monitoring, inspection and annual fee collection authority, to the Water Boards. Accordingly, the Commission and the Water Board shall confer with each other and coordinate, as needed, in the enforcement of the requirements. The project owner shall pay the annual waste discharge permit fee associated with this facility to the Water Boards. In addition, the Water Boards may "prescribe" these requirements as waste discharge requirements pursuant to Water Code Section 13263 solely for the purposes of enforcement, monitoring, inspection, and the assessment of annual fees, consistent with Public Resources Code Section 25531, subdivision (c). No later than sixty (60) days prior to any wastewater or storm water discharge or use of land treatment units, the AMS project shall provide documentation to the CPM, with copies to the Lahontan RWQCB, demonstrating compliance with the WDRs established in Appendices C, D, and E. Any changes to the design, construction, or operation of the ponds, treatment units, or storm water system shall be requested in writing to the CPM, with copies to the Lahontan RWQCB, and approved by the CPM, in consultation with the Lahontan RWQCB, prior to initiation of any changes. The AMS project shall provide to the CPM, with copies to the Lahontan RWQCB, all monitoring reports required by the WDRs, and fully explain any violations, exceedances, enforcement actions, or corrective actions related to construction or operation of the ponds, treatment units, or storm water system. SWAT2-01-00, construction plans for the Evaporation ponds and LTU's were submitted to the CEC, Lahontan and CBO on June 6, 2013 and approved by all agencies on June 11, 2013. SWAT2-02-00, a modification to the LTU plans was submitted to the CEC and Lahontan on August 5, 2013, and an approval was issued on August 8, 2013. SWAT2-04-00 for a change in verification was requested by the CEC but AEPC suggested that any change will be covered by the closure compliances, COMPLIANCE-12, -13 and -14. The CEC responded on September 12, 2013 that they were in agreement. SWAT2-03-00, for the monitoring well system was submitted to the CEC and Lahontan the week of 10/28. Abeinsa EPC engineering staff is still coordinating with the CEC and Lahontan on the final design. Abeinsa EPC submitted a well plan for CEC review on 11/27/2013. CEC provided comments to the well plan on 12/17/2013. Revised well plan submitted to the CEC on 12/23/2013, CPM approved on 01/14/2014. DMP submitted to CEC on 06/03/2014. CEC provided comments, DMP resubmitted on 06/30/2014. SWAT-2-08-02 request to use Cooling Tower and pipe cleaning water for dust control submitted and approved on 06/17/2014. SWAT-2-06-01, Bioremediation Manual, was submitted to CPM on 06/20/2014. CPM approved SWAT-2-06-01 Bioremediation Manual on 07/02/2014. DMP, SWAT-2-09-05 resubmitted to CPM on 08/21/2014, CPM approved on 08/26/2014. SWAT-02-10-05 closure plans for the LTU's and Evaporation ponds approved by the CPM on 08/26/2014. CEC provided comments on the GMN portion of the combined DMP/GMN plan on 09/29/2014, package resubmitted to CPM on 10/27/2014, please see attachment. SWAT-2-11-00 request to use steam blow test water for dust control submitted on 09/30/2014, CPM approved on 10/02/2014, please see attachment. SWAT-2-03-00 Submittal for the monitoring well locations submitted to CPM on 08/14/2014 and approved on 11/20/2014. SWAT-2-12-00 for the DMP/GMN, rev 4 submitted to CPM on 10/27/2014, CPM approved on 11/13/2014. SWAT-2-13-00, request to CPM to use condensate water for dust control submitted to CPM on 11/20/2014, CPM approved on 11/24/2014. **Now that evaporation ponds are operational, weekly pond inspections are required. Please see attached for the December 2014 weekly inspection forms for the Alpha and Beta evaporation ponds.**

## SOIL&WATER-4

Well abandonment status for remaining abandonments submitted to CPM on 09.06.12, As of 09.06.12, the CEC has approved all well abandonments with the exception of wells 11 and 14 (stuck pump wells). They require a wildlife survey in the area of the two wells to ensure that their habitats won't be disrupted with the use of explosives for the stuck pump wells. As of 10.13.2012, the well contractor was able to remove the pump from Well #11 by conventional means. However, Well #2 has now been determined as having a stuck pump and needing explosives to remove. The abandonment package was revised and resubmitted to the CEC on 10.22.2012. CEC has approved the use of explosives on Wells #2 and #14 as of October 31, 2012. As of March 5, 2013, the remaining wells to be abandoned are: Ryken and Wetlands. Wells #2 and #14 (by explosives) and 8, 10, 19, were abandoned during January 2013 but their well completion reports were finalized this month, please see attachments. Ryken and Wetlands wells were approved to be abandoned by SBC on May 7, 2013. Final abandonment was completed on May 17, 2013 and well completion reports were submitted to the CEC for approval. ASI and Abeinsa EPC have agreed on a new location of the Beta #4. An exhibit indicating final production well locations (including Beta #4) was provided to CPM on 11/27/2013. CPM responded asking for the well design by well contractor that will show a sealed upper layer which prevents any infiltration of the perched layer into the lower aquifer. Well contractor submitted a permit to SBC on 12/07/2013 but decision was made to go with a different contractor. New contractor submitted a permit for the Beta #4 well on 01/14/2014, SBC approved on 01/31/2014 based on the condition that Beta #1 be retrofitted as a monitoring well and the Beta #2 conductor casing be destroyed. The CPM further approved the use of Beta #1 for construction water while Beta #3 construction was completed. CPM approved the Beta #4 permit on 02/04/2014. A request to extend the discharge permit for well test water to the BLM marsh was submitted to CPM on 02/10/2014, CPM approved on 02/12/2014. Beta #4 well completion report submitted to CPM on 05/22/2014. SBC final well cards for Alpha #1 and #2, SWAT-4-14-00 and SWAT-4-15-00 respectively, provided by SBC on 09/02/2014, submitted to CPM on 09/30/2014, approved on 10/10/2014. SWAT-04-13-01, contractor well certification letter submitted to CPM on 09/09/2014. SBC final well card for Beta #4, SWAT-4-12-00, provided by SBC, submitted to CPM on 09/04/2014. CEC approved SWAT-0-12-00 on 11/10/2014.

## SOIL&WATER-5

Beginning six (6) months after the start of construction, the project owner shall prepare a semi-annual summary report of the amount of water used for construction purposes. The summary shall include the monthly range and monthly average of daily water usage in gallons per day.

**For December 2014, 3,979,000 gallons were pumped from Beta #4, 2,126,000 gallons from Alpha #2 (North), and 2,064,000 gallons from Alpha #1 (South). SBC didn't use any water for the month. The overall total site water usage for December 2014 is 8,169,000 gallons. The running total of water usage for construction/testing purposes from January 1, 2014 to December 31, 2014 is 61,120,451 gallons. To date, there were 291 working days for 2014 which equates to 210,036 gal/day. This equates to 5,093,371 gal/month, please see attachments.**

## SOIL&WATER-6

The project owner shall do all of the following:

1. At least sixty (60) days prior to project construction, the project owner shall submit to the CPM, for review and approval, a comprehensive plan (Groundwater Level Monitoring and Reporting Plan) presenting all the data and information required in Item A above. The project owner shall submit to the both the CPM all calculations and assumptions made in development of the plan.
2. During project construction, the project owner shall submit to the CPM quarterly reports presenting all the data and information required in Item B above. The project owner shall submit to the CPM all calculations and assumptions made in development of the report data and interpretations.
3. No later than sixty (60) days after commencing project operation, the project owner shall provide to the CPM, for review and approval, documentation showing that any mitigation to private well owners during project construction was satisfied, based on the requirements of the property owner as determined by the CPM.
4. During project operation, the project owner shall submit to CPM, applicable quarterly, semi-annual, and annual reports presenting all the data and information required in Item C above. The project owner shall submit to the CPM all calculations and assumptions made in development of report data and interpretations, calculations, and assumptions used in development of any reports.
5. The project owner shall provide mitigation as described in Item D above, if the CPM's inspection of the monitoring information confirms project-induced changes to water levels and water level trends relative to measured preproject water levels, and well yield has been lowered by project pumping. The type and extent of mitigation shall be determined by the amount of water level decline and site-specific well construction and water use characteristics. The mitigation of impacts will be determined as set forth in Item D above.
6. No later than 30 days after CPM approval of the well drawdown analysis, the project owner shall submit to the CPM for review and approval all documentation and calculations describing necessary compensation for energy costs associated with additional lift requirements.
7. The project owner shall submit to the CPM all calculations, along with any letters signed by the well owners indicating agreement with the calculations, and the name and phone numbers of those well owners that do not agree with the calculations.
8. If mitigation includes monetary compensation, the project owner shall provide documentation to the CPM that compensation payments have been made by March 31 of each year of project operation or, if a lump-sum payment is made, payment shall be made by March 31 of the following year. Within 30 days after compensation is paid, the project owner shall submit to the CPM a compliance report describing compensation for increased energy costs necessary to comply with the provisions of this condition.
9. After the first 5-year operational and monitoring period, and every subsequent 5-year period, the project owner shall submit a 5-year monitoring report to the CPM for review and approval. This report shall contain all monitoring data collected and provide a summary of the findings and a recommendation about whether the frequency of water level measurements should be revised or eliminated.
10. During the life of the project, the project owner shall provide to the CPM all monitoring reports, complaints, studies, and other relevant data within 10 days of being received by the project owner.

Fourth quarter water quality report submitted to CPM on 03/28/2014 CPM provided comments, report resubmitted on 04/25/2014. SWAT6-09-00 2014 Q2 Water Quality Report submitted to CPM on 09/04/2014. **CEC provided comments on the GMN portion of the combined DMP/GMN plan on 09/29/2014, since the DMP and GMN are now combined, the CEC required the package to be submitted under both compliances. SWAT-6-01-01, DMP/GMN, rev 4, resubmitted to CPM on 10/27/2014, CPM approved on 11/13/2014. CPM requested that since the plan was combined that a submittal under both SWAT-2 and SWAT-6 be done. SWAT-6-08-00, CEC approval of the DMP/GMN, rev 4, was approved on 12/26/2014, please see attachment. SWAT-6-10-00, Q3 2014 Water Quality report submitted to CPM on 11/11/2014.**

## SOIL&WATER-9

Prior to the start of construction of the sanitary waste system, the project owner shall submit to the County of San Bernardino for review and comment, and to the CPM for review and approval, plans for the construction and operation of the project's proposed sanitary waste septic system and leach field. These plans shall comply with the requirements set forth in County of San Bernardino Code Title 3, Division 3, Chapter 8 Waste Management, Article 5, Liquid Waste Disposal and Title 6, Division 3, Chapter 3, and the Uniform Plumbing Code. Project construction shall not proceed until the CPM has approved the plans. The project owner shall remain in compliance with the San Bernardino County code requirements for the life of the project.

The septic plans were submitted to CEC on 04/03/2012 for review and approval. CEC approved on 04/23/2012. Plans were resubmitted to SBC on 12/16/2013 to include the addition of the sanitary lift station, comments received regarding the addition and reason for the sanitary lift station, package resubmitted to SBC on 02/19/2014, SBC approved on 02/20/2014. Plans were submitted to CPM on 02/28/2014, CPM approved on 04/23/2014.

## SOIL&WATER-10

The project owner shall obtain a permit to operate a non-transient, non-community water system with the County of San Bernardino at least sixty (60) days prior to commencement of construction at the site. The project owner shall supply updates annually for all monitoring requirements and submittals to County of San Bernardino related to the permit, and proof of annual renewal of the operating permit. To date, potable water system is not installed, thus no monitoring requirements are in effect.

Alpha #1 well permit issued by San Bernardino County on 01/10/2012.

Alpha #2 well permit issued by San Bernardino County on 01/10/2012.

Beta #3 well permit issued by San Bernardino County on 06/04/2012.

Non-transient, non-community water system submitted to SBC on 05/05/2014.

Non-transient, non-community water system resubmitted to SBC on 07/30/2014.

# ABENER TEYMA MOJAVE

13911 Park Avenue, Suite 208  
Victorville, CA 92392  
Phone: 480-287-1419

**Non-transient, non-community water system resubmitted to SBC on 08/27/2014. SBC returned with comments on 09/24/2014, SBC has agreed to schedule an inspection for 01/29/2015.**

## **GEN-2**

Provide schedule updates in the monthly compliance report.

**All engineering disciplines have submitted updated master drawing/spec lists. In addition, the latest construction schedule and equipment list has been provided. Please see attached copies.**

## **CIVIL-1**

At least 15 days (or project owner and CBO approved alternative time frame) prior to the start of site grading the project owner shall submit the documents described above to the CBO for design review and approval. In the next monthly compliance report following the CBO's approval, the project owner shall submit a written statement certifying that the documents have been approved by the CBO.

## **STRUC-1**

Submit to the CPM, in the next monthly compliance report, a copy of a statement from the CBO that the proposed structural plans, specifications, and calculations have been approved and comply with the requirements set forth in applicable engineering LORS.

## **MECH-1**

Send the CPM a copy of the transmittal letter.

## **MECH-2**

Alpha & Beta Inspections for Compressed Air and Steam Boiler Systems from California Industrial Relations performed on 10/08/2014.

## **ECN-1**

Send the CPM a copy of the transmittal letter in the next monthly compliance report.

## **ELEC-1**

Send the CPM a copy of the transmittal letter in the next monthly compliance report.

**Elec-1-20.00x2: Alpha & Beta CP Cable Tray Systems submitted to CBO on 12/12/2014, CBO approved on 12/22/2014, please see attachment.**

**Elec-1-30.00x1: Alpha & Beta Instrumentation & Control Cable Trays submitted to CBO on 12/13/2014, CBO approved on 12/22/2014, please see attachment.**

# ABENER TEYMA MOJAVE

13911 Park Avenue, Suite 208  
Victorville, CA 92392  
Phone: 480-287-1419

**Elec-1-59.00: Alpha & Beta Sanitary Pump Permanent power submitted to CBO on 12/02/2014, CBO approved on 12/08/2014, please see attachment.**

## **NOISE-7**

At least 15 days prior to the first steam blow, the project owner shall notify all residents and business owners within two miles of the project site. The notification may be in the form of letters, phone calls, fliers, or other effective means as approved by the CPM. The notification shall include a description of the purpose and nature of the steam blow(s), the planned schedule, expected sound levels, and explanation that it is a one-time activity and not part of normal plant operation. During steam blow activities, noise levels will be monitored at receptor locations LT-1, ST-1, and ST-2 and the results reported to the CPM.

First steam blow occurred on 08/29/2014 at Alpha power block. All Neighbors within 2 miles of the project site were notified 15 days prior to first steam blow by registered mail and by personal verbal notification. Steam Blow Decibel Readings submitted to CPM on 10/21/2014, all readings were below the maximum noise level as specified in the compliance.

## **TRANS-1**

Prior to site mobilization activities, the project owner shall secure or construct one or more park-and-ride facilities with a combined capacity of 500 spaces.

Verification: At least 90 days prior to start of site mobilization, the project owner shall propose new park-and-ride lot(s) to the County of San Bernardino for review and comment and the Compliance Project Manager (CPM) for review and approval. The proposal shall include a rationale for the location of the lot(s) based upon the expected geographic distribution of employees and availability of suitable sites. At least 30 days prior to site mobilization, the project owner shall notify the County of San Bernardino and the CPM that the park-and-ride lot(s) are ready for usage and available for inspection.

**Submittal for permission to close the park and ride, TRANS-1-03-00 made to the CPM on 12/11/2014, please see attachment. CPM granted approval to close the park and ride on 12/11/2014, please see attachment.**

## **TRANS-3 [A/T]**

No later than two months after the end of construction activities, the applicant shall submit an analysis of the roadway pavement conditions to San Bernardino County and Caltrans for review and comment and to the CPM for review and approval. The review will include photographs, the visual analysis of pavement

and sub-surface conditions, and a schedule for repair. After the repairs are completed, the project owner shall submit a letter to San Bernardino County, Caltrans, and the CPM indicating such repairs are finished and ready for inspection. **Harper Lake Road Restoration plans being reviewed by registered engineer. Plans to be submitted to SBC on 10/06/2014. Submittal to CPM on 09/23/2014 to request that a pavement analysis is no longer valid due to SBC grinding the surface until a new road is in place. CPM approved that a pavement analysis is no longer needed on 09/23/2014 because it will be covered by SBC/CALTRANS comments.**

## TRANS-5 [A/T]

The project owner shall not allow hazardous materials deliveries during non-daylight periods (during both construction and operation) to enhance safety at the rail crossing. A record of hazardous materials deliveries shall be provided to the CPM as required in HAZ-3. **Please see attached Beck Oil delivery lists.**

## TSE-1

Provide schedule updates in the MCR.  
**Please see attached Electrical Master List.**

## TSE-4

At least 30 days (or a lesser number of days mutually agreed to by the project owner and the CBO) prior to the start of each increment of construction, the project owner shall submit to the CBO for review and approval the final design plans, specifications and calculations for equipment and systems of the power plant switchyard, outlet line and termination, including a copy of the signed and stamped statement from the responsible electrical engineer attesting to compliance with the applicable LORS, and send the CPM a copy of the transmittal letter in the next Monthly Compliance Report. The following activities shall be reported in the Monthly Compliance Report:

- A. Receipt or delay of major electrical equipment;  
Please see attached list of receipt of major electrical equipment.
- B. Testing or energization of major electrical equipment;  
Please see attachments for electrical tests to date.
- C. The number of electrical drawings approved, submitted for approval, and still to be submitted.

**Please see attached Electrical Master List.**

## TSE-5

At least 60 days prior to the start of construction of transmission facilities (or a lesser number of days mutually agreed to by the project owner and CBO), the project owner shall submit to the CBO for approval:

- A. Design drawings, specifications and calculations conforming with CPUC General Order 95 or NESC, Title 8, Articles 35, 36 and 37 of the "High Voltage Electric Safety Orders", NEC, applicable interconnection standards and related industry standards, for the poles/towers, foundations, anchor

bolts, conductors, grounding systems and major switchyard equipment.

B. For each element of the transmission facilities identified above, the submittal package to the CBO shall contain the design criteria, a discussion of the calculation method(s), a sample calculation based on "worst case conditions" and a statement signed and sealed by the registered engineer in responsible charge, or other acceptable alternative verification, that the transmission element(s) will conform with CPUC General Order 95 or NESC, Title 8, California Code of Regulations, Articles 35, 36 and 37 of the, "High Voltage Electric Safety Orders", NEC, applicable interconnection standards, and related industry standards.

C. Electrical one-line diagrams signed and sealed by the registered professional electrical engineer in responsible charge, a route map, and an engineering description of equipment and the configurations covered by requirements TSE-5 a) through f) above. 7 Worst case conditions for the foundations would include for instance, a dead-end or angle pole.

D. The Special Protection System (SPS) sequencing and timing if applicable shall be provided concurrently to the CPM.

E. A letter stating the mitigation measures or projects selected by the transmission owners for each reliability criteria violation are acceptable,

F. An Operational study report based on the expected or current COD from the California ISO and/or SCE, and

G. A copy of the executed LGIA signed by the California ISO and the project owner.

Submittal of project LGIA sent to CPM on 11/08/2013, CPM approved on 12/02/2013.

## **TSE-7**

The project owner shall provide the following Notice to the California Independent System Operator (California ISO) prior to synchronizing the facility with the California Transmission system:

1. At least one week prior to synchronizing the facility with the grid for testing, provide the California ISO a letter stating the proposed date of synchronization; and
2. At least one business day prior to synchronizing the facility with the grid for testing, provide telephone notification to the California ISO Outage Coordination Department.

The project owner shall provide copies of the California ISO letter to the CPM when it is sent to the California ISO one week prior to initial synchronization with the grid. The project owner shall contact the California ISO Outage Coordination Department, Monday through Friday, between the hours of 0700 and 1530 at (916) 351-2300 at least one business day prior to synchronizing the facility with the grid for testing. A report of conversation with the California ISO shall be provided electronically to the CPM one day before synchronizing the facility with the California transmission system for the first time. TSE-07-00, 7 day advance synchronization notification letter to CAISO submitted to CAISO and CPM on 10/23/2014, please see attachment. Synchronization was delayed, another letter was submitted to CAISO and CPM on 10/31/2014. **TSE-07-00-02, 7 day advance synchronization notification letter to CAISO resubmitted to CPM on 11/07/2014,**

# ABENER TEYMA MOJAVE

Victorville, CA 92392  
Phone: 480-287-1419

**please see attachment, CPM approved on 12/26/2014, see attachment. TSE-07-01-00, 1 day phone notification to CAISO of synchronization submitted to CPM on 11/19/2014, please see attachment, CPM approved on 12/26/2014, see attachment.**

## **TLSN-3**

The project owner shall file copies of the pre and post energization measurements within 60 days after completion of the measurements.

Pre-energization results were sent to the CPM on 06/09/2014. CPM approved on 07/07/2014.

## **TLSN-5**

The project owner shall ensure that all permanent metallic objects within the right-of-way of the project-related lines are grounded according to industry standards regardless of ownership.

At least 30 days before the lines are energized, the project owner shall transmit to the CPM a letter confirming compliance with this Condition.

Confirmation letter sent to the CPM on 11/06/2013, CPM approved on 11/07/2013.

## **VIS-1**

Revised Surface Treatment Package was submitted to CPM on 04/14/2014. CPM approved plans on 05/16/2014. **VIS-01-02-00, Colored photographs from Key Observation Points (KOP's) 1-7a submitted to CPM as required by this compliance on 10/29/2014. CPM approved this submittal on 12/26/2014, please see attachment. No date has been set for CPM and CEC visual staff inspection of color schemes on all above ground equipment, buildings and structures.**

## **VIS-3**

Permanent Lighting plans. Package was submitted to CPM on 05/05/2014. CPM approved plans on 05/05/2014.

Should you have any questions or need any additional information, please do not hesitate to contact me.

Sincerely,

Steven Pochmara  
**ABEINSA EPC**

**Subject:** RE: WASTE-10-07-01 Mojave Solar Waste Characterization

Attached please find my review/comments.

It is not clear to me how many wastes there are. It appears there are at least several POGs and presumably several (perhaps five) different spill cleanup wastes being sampled/tested/evaluated.

There is clearly one (presumably treated waste) from alpha LTU and another (presumably treated waste) from beta LTU. Based upon the description on page three these two samples do not appear to be from HTF-contaminated soil wastes, so their purpose is unclear. Perhaps, these samples are irrelevant to the wastes to be characterized.

There were five composite samples taken. It is not clear which wastes were composited, how they were composited, or why composite samples were taken instead of discrete samples. (April thru August).

These samples appear to have exceeded the holding times for volatiles. However, that may be insignificant (see below). As the sample results for aquatic toxicity indicated mortality in several test chambers, it appears the compositing failed on one occasion, but not on others, and that discrete sampling should probably be conducted in the future. I.e., it is possible that compositing the samples

resulted in dilution of the most contaminated samples by the less contaminated samples. This could have biased the results towards the nonhazardous result.

There appears to be some Test America analytical data for four samples in (March through June). It is not clear how his data relates to the above-mentioned five samples. The COC for these samples does not contain sampling dates that match the above but indicate 7/7 as the date instead. These samples appear to have been received in Irvine Ca. on 7/7/14. The California Certification number in the Test America packet does not appear to match the subsequent packets. At this point, I cannot relate this group of samples to the hazardous waste determination presented in pages one through nine of the letter. Thus, I have ignored it in my conclusions.

The COC for the “subsequent” packet indicates that the two uncontaminated samples and the five monthly composite samples (not the four samples in the preceding paragraph) were received by Enviro-Chem-Laboratories on 8/29/14. According to that COC the monthly samples were all taken on the morning of 8/29 (i.e., not monthly as described). The TCLP results for these seven samples were all non-detect or were insignificant. The aquatic toxicity test results for the uncontaminated LTU samples indicate the uncontaminated soils in the two LTUs are not aquatically toxic. For the five monthly samples, one of the five sample results indicates the waste was hazardous waste or that a definitive bioassay test is needed to determine the true LC50. (The Test procedure requires a serial dilution (i.e., a “full bioassay” in lieu of a screening test) where mortality at the 750 mg/l screening test level is 40% or greater. In this sample there was 100% mortality at the higher concentration.). Not knowing how the samples were composited, this could indicate that at least one aliquot of waste that comprised the composited sample could have been highly aquatically toxic. Of course, this cannot be stated conclusively absent an understanding of the sample plan, the various wastes sampled and how they were composited. The remaining four monthly samples were not aquatically toxic, setting aside the compositing question and any dilution of highly contaminated spill wastes with less contaminated spill wastes that may have occurred through such sampling techniques.

The packet for the 10/10 sample, presumably another spill cleanup waste, indicates this waste sample was not corrosive, and was not toxic due to metals content via the TTLC. The packet also indicates that this waste was not hazardous via the TCLP. Additional data for this waste sample indicates the waste did not exceed any STLC for metals. The lab report indicates the soil was not ignitable, but the test method used, given the soil is presumably a “solid” is questionable. The “hazardous waste determination” for what waste exactly (at this point in the review), states the 10/10 spill cleanup waste sampled and tested for reactivity and was shown to be not reactive. I observed no such analytical data in the 10/10 packet. (There are however, MSDS sheets that may support this conclusion, as generator knowledge.)

The acute inhalation toxicity of the heat transfer fluid is determined to be non-hazardous, based upon generator knowledge. I agree with the quoted research summaries for the fluid when tested as a vapor, gas, or mist. However, it would be in the generators interest to differentiate and better explain why these study results are significant and relevant to the waste-form (as-generated) and to this hazardous waste determination. Specifically, at issue, appears to be a number of published LC50 values supporting the “hazardous” conclusion for the solid forms of these compounds, when tested as dusts in air. It is recommended that the generator better flesh out (in its hazardous waste determination) its explanation of the importance and relevance of using the appropriate published LC50 values, in light of the form of the wastes at Abengoa, and the wording in the specific title 22 regulation criterion, and include an explanation of the irrelevant “hazardous” values.

In conclusion, it appears (to me) that the generator has sufficient data to support its conclusion that many or most of the spill cleanup wastes sampled were nonhazardous wastes. However, it appears at

least one of the wastes sampled and composited (with other similar waste) was hazardous for aquatic toxicity. In addition, the samples may have been held for such a long time that the nature of the samples may have been impacted by volatilization and/or degradation. It is my recommendation that Abengoa improve on its sampling procedures and sample handling techniques for future sampling to better characterize the volatile constituents and their potential aquatic toxicity impact on the wastes.

I hope this information is helpful.

**Subject:** WASTE-10-07-01 Mojave Solar Waste Characterization

Good Afternoon Charles,

As discussed with our environmental department, please see attached for the Mojave Solar Waste Characterization and supporting documentation for your review and approval.

Please feel free to contact me if you have any questions.

Regards,

Steven Pochmara - Permit Manager

Hi Steve, the LTUs can now be used to treat the HTF impacted soil. Also, we will be sending you a memo discussing the questions raised by Charles and a list of items we would like addressed. This memo won't be ready until later next week.

Please have a good weekend.

Chris

7. Is routine BMP inspection and maintenance documentation on file? ☒

Supplemental Form Attached? YES NO  
NOTE: THE "CONSTRUCTION SITE STORMWATER RUNOFF CONTROL INSPECTION FORM" IS THE ONLY FORM IN USE FOR INSPECTIONS DOCUMENTATION FOR THIS PROJECT.

STORM ACTIVITY:  
DEFICIENCIES:

### Soil Stabilization Practices

Yes No

### Comments

8. Are BMPs implemented on inactive disturbed areas? ☒
9. Are implemented BMPs effectively stabilizing soil? ☒
- Are BMP materials stockpiled and available for use? ☒

Alpha West

Alpha East

Beta West

11. Was any erosion observed? ☒

Beta East

### Sediment Control Practices

Yes No

### Discharge Risk Potential

12. Are sediment control BMPs in place and maintained? ☒
13. Are sediment BMPs placed to protect the downstream perimeter of the site? ☒
14. Are the BMPs adequately controlling sediment? ☒
15. Are the storm drain inlets protected? ☒

Alpha West

Alpha East

Beta West

Beta East

### Sediment Discharges

16. Is there evidence that sediment was discharged previously from the site? ☒
17. Is sediment currently being discharged from the site? ☒

None

Minor

Major

None

Minor

Major

18. Where is sediment currently being discharged? Check all that apply:

19. Other

20. Creek

21. Drain inlet

22. Gutter

23. Drainage Outfall

24. Wetland

25. Vernal Pool

26. Drainage swale

### Tracking Controls

Yes No

### Discharge Risk Potential

- Are adjacent roads and construction entrances free of sediment? ☒

None

Minor

Major

28. Are current BMPs effectively preventing tracking of sediment? ☒

None

Minor

Major

## CONSTRUCTION SITE STORMWATER RUNOFF CONTROL INSPECTION FORM, continued...

**Additional Comments:** - Light rain all day on Wednesday 12/17  
All BMP's sufficiently did their job.  
- Bird deterrents functioning properly, no birds in ponds

Hi Steven,

Staff has reviewed S&W-6-08-00 and needs to have some additional information included in the Appendix B of the DMP.

Please include the list of well owners contacted and registered mail receipts returned as stated on page 49 of the DMP.

Please supply this information as soon as possible for approval of S&W-6-08-00.

Thank you,

Dale R.

|          |                                      |                                                                                      |                  |                 |                                       |                        |                      |
|          |                                      |                                                                                      |                  |                 |                                       |                        |                      |
|          |                                      |                                                                                      |                  |                 |                                       |                        |                      |
|          |                                      |                                                                                      |                  |                 |                                       |                        |                      |
|          |                                      |                                                                                      |                  |                 |                                       |                        |                      |
|          |                                      |                                                                                      |                  |                 |                                       |                        |                      |

## ABENER TEYMA MOJAVE - Specifications List

Compliance No.: GEN-2

Job: Mojave Solar Project

Date: 12/3/14

Description: Specifications List

| Specification Number      | Specification Title                                                                    | Applicable Condition of Certification | Vendor Supplied or EOR | Reason For Submittal |
|---------------------------|----------------------------------------------------------------------------------------|---------------------------------------|------------------------|----------------------|
| 6007-ESP-ATP- 00-30-M100  | Electrical and Instrument Systems on Packaged Mechanical Equipment                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-31-C150  | Electrical Construction Insulation Resistance Testing                                  | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-32-C110  | Electrical Construction                                                                | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-32-C120  | Electrical Construction Rigid Conduit Installation                                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-32-C122  | Conduit Installation For Warehouse Only                                                | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-32-C125  | Electrical Construction Cable Tray Installation                                        | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-32-C130  | Electrical Construction Cable and Wiring Installation                                  | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-33-C105  | Electrical Construction Grounding Installation                                         | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-34-C100  | General Requirements for Electrical Construction                                       | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-34-C135  | Electrical Construction Wiring Device Installation                                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-34-S061  | Scope of Work-Collector Assembly Building                                              | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-34-S061V | Electrical Vendor Data Requirement                                                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-34-S062  | Electrical Construction Scope of Work-Warehouse Building                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-38-C115  | Electrical Equipment Installation                                                      | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E410  | Liquid Filled Transformers 230 kV, 100MVA or Less                                      | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E410V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E411  | Liquid Filled Transformers 230kv, 100MVA or Less Data Sheet                            | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E412  | Liquid Filled Transformers 10MVA, Data Sheet                                           | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E415  | Liquid Filled Transformers Above 100MVA                                                | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E416  | Liquid Filled Transformers Above 100MVA Data Sheet                                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E420  | Pad Mounted Transformer                                                                | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E420V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E421  | Pad Mounted Transformer Data Sheet                                                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-E422  | Pad Mounted Transformer Data Sheet                                                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-46-S050  | Construction Temporary Power Subcontract                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-47-M120  | Synchronous Generator                                                                  | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 00-47-M125  | Generator Synchronization Control                                                      | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-38-S030  | Substation Construction Scope of Work                                                  | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-38-S030V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-38-S050V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-E330  | Substation Circuit Breakers                                                            | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-E330V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-E331  | Substation Circuit Breakers Data Sheet                                                 | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-E340  | Disconnect Switches, Instrumentation Transformers, Lightning Arrestors, and Structures | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-E341  | Substation Disconnect Switch Data Sheet                                                | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-E342  | Substation Instrumentation Transformer Data Sheet                                      | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-E343  | Substation Lightning Arrestor Data Sheet                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 23-48-S032  | 242 kV Transmission Line Scope of Work                                                 | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 26-48-S032  | 230 kV Transmission Line Scope of Work                                                 | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 26-48-S032V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E150  | Low Voltage Variable Speed Drive Mounted Outside the MCC                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E150V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E151  | Wall Mounted Low Voltage Variable Speed Drive Data Sheet                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |

| 6007-ESP-ATP- 27-21-E215V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E260  | Unitized Distribution Substation                                                       | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E260V | Vendor Data Requirements For Construction Panelboards                                  | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E310  | Low Voltage Switchgear                                                                 | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E310V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E311  | Low Voltage Switchgear Data Sheet                                                      | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E370  | Low Voltage Bus Duct                                                                   | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E370V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E371  | Low Voltage Bus Duct Data Sheet                                                        | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E390  | Low Voltage Panel Boards                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E540  | Low Voltage Grounding Resistor                                                         | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E540V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 27-21-E541  | Low Voltage Grounding Resistor Data Sheet                                              | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 28-38-E350  | Medium Voltage Bus Duct                                                                | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 28-38-E350V | Vendor Data Requirements                                                               | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 28-38-E351  | Medium Voltage Iso Phase Bus Duct Data Sheet                                           | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 28-38-E352  | Medium Voltage Bus Duct Data Sheet                                                     | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-ESP-ATP- 28-43-E160  | Medium Voltage Variable Speed Drives                                                   | ELEC-1 (TYP)                          | Vendor                 | Approval             |

## ABENER TEYMA MOJAVE - Specifications List

|                           |                                                               |              |        |          |
|---------------------------|---------------------------------------------------------------|--------------|--------|----------|
| 6007-ESP-ATP- 28-43-E160V | Vendor Data Requirements                                      | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 23-46-E161  | Medium Voltage Variable Speed Drives Data Sheet               | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E220  | 5kV Motor Controllers                                         | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E220V | Vendor Data Requirements                                      | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E221  | 15kV Contactors                                               | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E221V | Vendor Data Requirements                                      | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E320  | Medium Voltage Switchgear                                     | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E320V | Vendor Data Requirements                                      | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E321  | Medium Voltage Switchgear Data Sheet                          | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E325  | Medium Voltage Interrupter Switch                             | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E325V | Vendor Data Requirements                                      | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-43-E326  | Medium Voltage Interrupter Switch Data Sheet                  | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-46-E530  | Medium Voltage Grounding Resistor                             | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-46-E530V | Vendor Data Requirements                                      | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-46-E531  | Medium Voltage Grounding Resistor Data Sheet                  | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-46-E532  | Medium Voltage Grounding Resistor Data Sheet                  | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-47-E130  | Diesel Generator                                              | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-47-E130V | Vendor Data Requirements                                      | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 28-47-M135  | Generator Synchronization Control                             | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 35-30-M110  | Induction Motors                                              | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 35-30-M111  | Motor Data Sheet 250hp and below; 250 hp to 400 hp VSD Driven | ELEC-1 (TYP) | Vendor | Approval |
| 6007-ESP-ATP- 35-30-M112  | Motor Data Sheet 250hp and Above                              | ELEC-1 (TYP) | Vendor | Approval |
|                           |                                                               |              |        |          |
|                           |                                                               |              |        |          |

Compliance No.: GEN-2

Job: Mojave Solar Project

Date: 12/3/14

Description: Electrical Site Drawings List - Temporary Power

| Drawing Number           | Drawing Title                                             | Applicable Condition of Certification | Vendor Supplied or EOR | Reason For Submittal |
|--------------------------|-----------------------------------------------------------|---------------------------------------|------------------------|----------------------|
| Alpha Phase 1            |                                                           |                                       |                        |                      |
| 6007-PLN-ATP- 28-21-O001 | Construction Temporary Power One-Line Diagram             | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-21-P002 | Construction Temporary Power Distribution Panel Schedules | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-21-P007 | Construction Temporary Power Distribution Panel Schedules | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-34-R001 | Construction Temporaary Power Electrical Site Plan        | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-34-R002 | Construction Temporary Power For Alpha Plant              | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| Alpha Phase 2 & Beta     |                                                           |                                       |                        |                      |
| 6007-PLN-ATP- 28-21-O001 | Construction Temporary Power One-Line Diagram             | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-21-P002 | Construction Temporary Power Distribution Panel Schedules | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-21-P003 | Construction Temporary Power Distribution Panel Schedules | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-21-P004 | Construction Temporary Power Distribution Panel Schedules | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-21-P005 | Construction Temporary Power Distribution Panel Schedules | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-34-R001 | Construction Temporaary Power Electrical Site Plan        | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-34-R002 | Construction Temporary Power For Alpha Plant              | ELEC-1 (TYP)                          | Vendor                 | Approval             |
| 6007-PLN-ATP- 28-34-R003 | Construction Temporary Power For Alpha Plant              | ELEC-1 (TYP)                          | Vendor                 | Approval             |
|                          |                                                           |                                       |                        |                      |
