Thank you for the opportunity to submit comments on funding priorities and opportunities to complement public and private **investments** in regions accelerating and deploying alternative and renewable fuel and vehicle technologies. UPS is committed to operating our business in a socially, environmentally and economically responsible manner. We operate over 500 alternative fuel/technology **vehicles in California** and 2000 world wide. It is our intent to continue to search for alternative energy sources to improve the communities in which we operate.

We believe there is not one single solution to this issue. The current technologies such as: electric, compressed natural gas, liquid natural gas, hybrid electric vehicles, hydraulic hybrid vehicles and propane are all part of the solution. All of these technologies cost more than conventional gasoline or diesel vehicles. We need the assistance of federal, state and local agencies to increase the volume of production for these technologies to help drive the cost down for the manufacturers. This will create a sustainable business model for them to mass produce this equipment.

With financial assistance we can jump start this process and make a significant **improvement to the environment as well as reduce our dependency on foreign energy sources.**
