In the Matter of: Application for Certification, ) Docket No. 07-AFC-3
for the CPV SENTINEL ENERGY PROJECT ) APPLICANT'S PROPOSED REVISED
by CPV Sentinel, LLC ) SCHEDULE

As directed in the Notice of Status Conference dated July 9, 2008, Applicant hereby provides its proposed revised schedule.

Background

In its recent staff reports, Applicant has expressed grave concerns regarding the extent to which staff review of the project is behind schedule. Relative to the Scheduling Order issued by the Committee on October 15, 2007, project review is now almost five months behind schedule. Applicant understands that modification of the proposed water supply plan for the project has necessarily resulted in some delay in staff's review of the project. However, Applicant is deeply concerned about the extent of the delay in issuance of a Preliminary Staff Assessment ("PSA"). The revised water supply plan was docketed on February 19, 2008—over five months ago. Under the CEC's standard twelve-month schedule, five months from data adequacy is the time period allotted for production of an entire PSA on a new Application for Certification. Thus, five months is an unduly long period of time for review of the project's proposed water supply plan.

Applicant understands that issuance of the PSA is imminent, and appreciates staff's recent efforts in this regard. Looking forward to the remainder of the CEC proceedings, for the reasons set forth below, it is imperative that every effort be made to make up for time that has been lost.
Applicant's Obligations Under Its Power Purchase Agreement

As the Committee is aware, Applicant has been awarded two power purchase agreements ("PPAs") from Southern California Edison ("SCE") for the full output of the project. The first PPA, which is for five LMS 100 MW units, requires the project to be commercially available by August, 2010. In order to meet this schedule, Applicant must release construction of the first five units of the project by no later than February, 2009. In order to release construction of the first five units by February, 2009, Applicant must have its final CEC certification by the end of the year. Applicant's failure to meet this schedule will mean that SCE will not have approximately 500 MWs of peaking capacity for the 2010 summer peak season - capacity that it has told the California Public Utilities Commission is critically necessary to meet system reliability for that season, and Applicant will itself be subject to severe financial penalties which could jeopardize the viability of the project altogether.

Proposed Schedule

In light of the foregoing, and in recognition of the fact that the PSA has been painstakingly prepared, Applicant recommends the following schedule for the remainder of the CEC proceedings:

<table>
