HECA Project -

Public Scoping Meeting for EIS

UPDATED COMMENTS For
PUBLIC SCOPING MEETING COMMENT FORM

Mr. Pozzuto,

Must be received on or before July 27, 2012
(Please print clearly)

Using the West, Texas explosion as the example; I am no longer reluctant to express exactly what my concerns are pertaining to the HECA plant (proposed)

They will pollute everything; the AIR, the WATER, the LAND, farmers CROPS; Plus be a severe threat to human and animal life in the area.

If this plant is permitted to be built at Palm Farms and be so very, very near TUPMAN, and BUTTONWILLOW, "Death On Our Doorsteps"

Then (I) blame the FED. Government for their Greed and lack of concern for us.

Name: SARAH E GOATCHER

Mailing Address: PO BOX 37

City: TUPMAN, CA.

State: CALIFORNIA

Zip: 93276-0037

Phone: 601-304-0014

Email: _____

Comment forms may be mailed to:

Another **CASE** in **POINT**

San Joaquin Refining Co., Inc., Tricor Refining, LLC, and Kern Oil & Refining Co. provide the following warning
DOCKET # LLC 08-AFC-84

Chemicals known to the State of California to cause cancer and chemicals known to the State of California to cause birth defects or other reproductive harm are found in crude oil, other petroleum products and their vapors, and in other chemicals that can be found in and around our facilities.

The foregoing warning is provided pursuant to Proposition 65. This law requires the Governor of California to publish a list of chemicals "known to the State to cause cancer or reproductive toxicity." This list is compiled in accordance with a procedure established by the Proposition, and can be obtained from the California Environmental Protection Agency. Proposition 65 requires that a clear and reasonable warning be given to persons who may be exposed to the listed chemicals.

Carbon dioxide levels soar to milestone level

BY **DOYLE RICE**
USA Today

For the first time in recorded human history, levels of carbon dioxide in the atmosphere have surpassed 400 parts per million (ppm), according to data released Friday morning from the National Oceanic and Atmospheric Administration from the Mauna Loa Observatory in Hawaii.

The average level of carbon dioxide over the past five days is 400.03 ppm. Carbon dioxide is the greenhouse gas that is responsible for 63 percent of the warming attributable to all greenhouse gases, according to NOAA's Earth System Research Laboratory in Boulder, Colo.

Increasing amounts of carbon dioxide and other gases caused by the burning of the oil, gas and coal that power our world are enhancing the natural "greenhouse effect," causing the planet to warm to levels that climate scientists say can't be linked to natural forces.

CO2 levels were around 280 ppm prior to the Industrial Revolution, when we first began releasing large amounts into the atmosphere through the burning of fossil fuels.

"That increase is not a surprise to scientists," said NOAA senior scientist Pieter Tans of the Earth System Research Lab. "The evidence is conclusive that the strong growth of global CO2 emissions from the burning of coal, oil, and natural gas is driving the acceleration."

During the last 800,000 years, CO2 fluctuated between about 180 ppm during ice ages and 280 ppm during interglacial warm periods. Today's rate of increase is more than 100 times faster than the increase that occurred when the last ice age ended.

The last time that carbon dioxide reached 400 ppm was millions of years ago. How do scientists know this?

Scientists can analyze the gases trapped in ice to reconstruct what climate was like in prehistory, but that record only goes back 800,000 years, according to the Scripps Institute of Oceanography in San Diego. It is harder to estimate carbon dioxide levels before then, but in 2009, one research team reported in the journal Nature Geoscience that it had found evidence of CO2 levels that ranged between 365 and 415 ppm, roughly 4.5 million years ago.

"They based their finding on the analysis of carbon isotopes present in compounds made by tiny marine phytoplankton preserved in ancient ocean sediments," according to Scripps.

"Crossing the 400 ppm threshold is more than a new data point about greenhouse gas levels in our atmosphere," says World Wildlife Fund chief scientist Jon Hoeksra. "It's a sobering reminder that the planet we know today will not be the planet we know tomorrow."

Texas launches criminal probe into plant explosion

ANGELA K. BROWN AND RAMIT PLUSHNICK-MASTI
The Associated Press

WACO, Texas — Texas law enforcement officials on Friday launched a criminal investigation into the massive fertilizer plant explosion that killed 14 people last month, after weeks of largely treating the blast as an industrial accident.

The announcement came the same day federal agents said they found bomb-making materials belonging to a paramedic who helped evacuate residents the night of the explosion. Bryce Reed was arrested early Friday on a charge of possessing a destructive device, but law enforcement officials said they had not linked the charge to the April 17 fire and blast at West Fertilizer Co.

"It is important to emphasize that at this point, no evidence has been uncovered to indicate any connection to the events surrounding the fire and subsequent explosion ... and the arrest of Bryce Reed by the ATF," the McLennan County Sheriff's Office said in a statement.

Texas Department of Public Safety said earlier Friday that the agency had instructed the Texas Rangers and the sheriff's department to conduct a criminal probe into the explosion. The agencies will join the State Fire Marshall's Office and the Bureau of Alcohol, Tobacco, Firearms and Explosives, which have been leading the investigation and never ruled out that a crime may have been committed.

"This disaster has severely impacted the community of West, and we want to ensure that no stone goes unturned and that all the facts related to this incident are uncovered."

DPS Director Steven McCraw said.

Reed was in federal custody. A criminal complaint unsealed Friday afternoon said he was arrested after McLennan County deputies were called earlier this week to a home in Abbott, a town about five miles from West, and found bomb-making materials — including a galvanized metal pipe, canisters filled with fuses, a lighter, a digital scale and a variety of chemical powders.

"After further investigation, it was determined that the resident had unwittingly taken possession of the components from Reed on April 26," says the complaint signed by ATF special agent Douglas Kunze.

An ATF explosives specialist and a chemist examined the items and agreed the "combination of parts can be readily assembled into a destructive device," the complaint says.

Reed made an initial appearance in federal court in Waco on Friday, but did not enter a plea.

Officials have largely treated the West explosion as an industrial accident, though investigators still searching for the cause of a fire that preceded the blast have said they would treat the area as a crime scene until all possibilities were considered.

The State Fire Marshal's Office released a statement Friday saying it decided to continue pursuing a criminal probe because roughly 250 leads have developed and more than 400 people have been interviewed.

Authorities have focused on ammonium nitrate, a chemical commonly used as a fertilizer, but that also can be explosive in the right conditions, as the cause of the explosion.

blinders, seeing the world from higher
and clearer summits; toward the nega-
tive, some experience drift, fear, uncer-
tainty, confusion, panic, reactive rigidity,
banging up against and striking out
against foreignness and the unfamiliar.
Somehow and at some distant point,
things will settle down, but while we are
on the road to getting there, things will
get rocky. We can expect, as the nega-
tive raises its ugly head, that bad
things will happen.

And guess what?
They have.

Deadly intention
is but one face of
the ugly side of
change which
opens doors, and

closes others. And it's against the clos-
ings that so many deadly intentions
occur. Closed are the doors of sameness,
uniformity, the homogeneous, the pre-
dictable, invariant, the allegedly pure
and undefiled. Those who are able to
change welcome and flourish because of
it, and those who cannot change resist
and beat against it. And some get so
caught up in the beating against that
they turn deadly.

Change for some is seen as defile-
ment, the corruption of the ideal. We
strive toward what we define as worthy;
we aspire toward what we define as the
good, the better, the best. And we, from
the basics of our families and cultures of
origin, expect that our ways and

thoughts are as valued by others as we
value them ourselves. There are those
who become unhinged when other ways
and thoughts filter onto the street and
into the air and are seen as dangerous,
wicked, to be beaten back by all means
necessary.

That's where the worm turns.

Resistance to change is but one deeply
rooted part of our human makeup; one
element among others in our intricately
balanced system of survival instincts.
But in some, it takes over and becomes
monstrous. Resistance becomes self-
righteousness, which becomes rigidity;
rigidity thwarted becomes driven anger,
which begets all manner of destructive
expressions.

There are those whose religion tells
them there's only one way, and all others
are sin. The serpent be slain and all of
his train. And deadly intentions begin.

And there are those who fail in life;
who see the achievements or friendships
of others as fruit denied them. Their goal
becomes to throw that system of
rewards out of joint and into such disar-
ray that nobody wins and all pay the
price of loss and despair. If I can't win
(or have friends), nobody can.

What can be done? Sadly, nothing.
Deadly intention arises within and
issues from those totally blind to the
dark side of what drives them. Their
blindness and danger come from their
sense of absolute rightness. Their self-
righteousness blinds them to everything
peripheral to their deadly mission. Con-
taining them and their danger is the best
we can do. And the tragedy of it all is
that we can identify and find them, if at
all, only after their deadly act.

We're not guinea pigs

In light of the recent explosion in West,
Texas, I believe the HECA project should
fold up, be abolished and sent back to
New Jersey, Connecticut and Massachu-
setts, where it originated. It is an experi-
mental plant that has not yet been prop-
erly safety tested. Their operation will be
much bigger than the operation in Texas.

I fear that an explosion could trigger
catastrophic damage in the Elk Hills oil
fields and annihilate the town of Tup-
man. It could also trigger a blow-up of a
propane manufacturing plant that is less
than a half mile from Tupman, thus
damaging the California Aqueduct in the
horrible process. I don't believe we
should be their guinea pigs!

HIT: For decades, Kern County has
at the center of some of the m
dramatic and significant moments in ae
space history. Remember the crowds, by
estimates as many as 300,000, packed in
Mojave Desert for the early space shuttl
ings? Or the breathtaking spectacle in IC
Dick Rutan and Jeana Yeager piloting thr
ager, designed by Dick's brother, Burt, ir
world's first around-the-world, nonstop
without refueling?

If all goes according to plan today,
SpaceShipTwo will take to the skies abov
eyond Mojave and in a critical test of S:
Richard Branson's spaceship — one des
to take tourists into space. This first pow
flight, according to Branson, will pave th
for the real featured attraction: a journey
space near the end of this year.

At one point not so long ago, the idea
tourists in space sounded ridiculously ir
sible. We wonder how many people wer
ing "impossible" in the days leading up
October 14, 1947, when an Air Force pilc
named Chuck Yeager, in a Bell X-1, beca
first pilot to break the sound barrier.

There's been a lull in tourism activity
Mojave since NASA's space shuttle prog
ended and a private space company mo
away — but only a brief lull. Hopefully, I
son can bring some of that back.

HIT: Some justice for state's angle

It's December and your buddies want
take you on a fishing trip. You pay \$46 fo
fishing license, or \$123 if you are not a C
nia resident, only to discover that it expi
the end of the calendar year. That will be
expensive fish, assuming you hook one.

Things might be changing. A bill has b
introduced in the state Senate that wou
make fishing licenses good for one year
the date of purchase. The bill passed eas
an early committee vote. Perhaps this "a
frustration" will soon be a thing of the p
