Subject: **IVANPAH SOLAR ELECTRIC GENERATING SYSTEM PROJECT, DATA ADEQUACY RECOMMENDATION (07-AFC-5)**

Staff has completed its data adequacy review of the Ivanpah Solar Electric Generating System project (ISEGS) electrical power plant Application for Certification (AFC) submitted on August 31, 2007. Staff has determined that the AFC does not contain all the information required by California Code of Regulations, Title 20, Section 1704, including Appendix B, for the 12-month AFC process. Of the 23 technical disciplines reviewed, 11 technical areas are inadequate. The sections of the AFC that require additional information to meet data adequacy for the 12-month process are: air quality, biological resources, cultural resources, land use, socioeconomics, soils, traffic & transportation, transmission system design, visual resources, waste management and water resources.

The proposed project would be constructed in three phases: two 100-megawatt (MW) phases (known as Ivanpah 1 and Ivanpah 2) and a 200-MW phase (Ivanpah 3). The three plants are collectively referred to as the Ivanpah Solar Electric Generating System (ISEGS) and would be located in:

- southern California's Mojave Desert, near the Nevada border, to the west of Ivanpah Dry Lake
- San Bernardino County 4.5 miles southwest of Primm, Nevada, 3.1 miles west of the California-Nevada border
- Township 17N, Range 14E, and Township 16N, Range 14E

The proposed project includes three solar concentrating thermal power plants, based on distributed power tower and heliostat mirror technology, in which heliostat (mirror) fields focus solar energy on power tower receivers near the center of each heliostat array. Each 100-MW site would require approximately 850-acres (or 1.3 square miles) and would have three tower receivers and arrays; the 200-MW site would require approximately 1,600 acres (or 2.5 square miles) and would have 4 tower receivers and arrays. Given that the three plants would be developed in concert, the proposed solar facilities would share common facilities including an administration building, operations and maintenance building, substation, access road, and the reconducted transmission lines for all three phases. The total area required for all three phases including the

shared facilities would be approximately 3,400-acres (or 5.3 square miles). Construction of the entire project is anticipated to begin in the first quarter of 2009, with construction being completed in the last quarter of 2012.

Attachment A contains an overview of whether each technical discipline evaluated is adequate or inadequate. Attachment B contains detailed data adequacy worksheets that describe staff's findings for each information requirement for the 12-month AFC process. We have not received written comments from other agencies.

At the Energy Commission's business meeting on October 10, 2007, staff will recommend that the Energy Commission not accept the AFC until all the additional information specified in Attachment B is supplied. Pursuant to California Code of Regulations, Title 20, Section 1709 (c), if the Energy Commission accepts staff's recommendation, the Energy Commission may use the attached Data Adequacy worksheets to indicate in writing those parts of the AFC that fail to meet the information requirements and the manner in which it can be made complete.

If you have any questions, please call Jack W. Caswell, staff's Project Manager, at (916) 653-0062.

For the cooling tower, data shall include heat rejection rate, exhaust temperature, exhaust mass flow rate, liquid to gas mass flow ratio, and, if the tower is plume-abated, moisture content (percent by weight) or plume-abated fogging curve(s). The parameters shall account for a range of ambient conditions (temperature and relative humidity) and proposed operating scenarios, such as duct firing and shutting down individual cells. For the heat recovery steam generator exhausts, data shall include moisture content (percent by weight), exhaust mass flow rate, and exhaust temperature. The parameters must correspond to full-load operating conditions at specified ambient conditions, and shall account for proposed operating scenarios, such as power augmentation (i.e., evaporative coolers, inlet foggers, or steam injection) and duct firing, or proposed HRSG visible plume abatement, such as the use of an economizer bypass. For simple-cycle projects, provide analogous data for the exhaust stack(s).	Pg. 5.13-30, sect. 5.13.4.4.7. Pg. 5.13-32, sect. 5.13.4.5.7	Yes

Appendix B (g) (6) (F)	Provide: i) full-page color photographic reproductions of the existing site, and ii) full-page color simulations of the proposed project at life-size scale when the picture is held 10 inches from the viewer's eyes, including any project-related electrical transmission lines, in the existing setting from each key observation point. If any landscaping is proposed to comply with zoning requirements or to mitigate visual impacts, include the landscaping in simulation(s) representing sensitive area views, depicting the landscaping five years after installation; and estimate the expected time until maturity is reached.	Figures 5.13-3 -8. Figures 5.13-9a – 5.13-10b.	No	Please provide individual life-size photos of Figure 5.13-9a, Figure 5.13-9b, Figure 5.13-10a and Figure 5.13-10b. The purpose behind the use of a life-size (approximately tabloid size) photo is that if an individual extended it to a normal reading range and lined it up with the horizon at the KOP location, the photo simulation if accurate will lineup/match the actual physical setting providing a true to life view of the proposed power plant.
Appendix B (g) (6) (G)	An assessment of the visual impacts of the project, including light, glare, and any modeling of visible plumes. Include a description of the method and identify any computer model used to assess the impacts. Provide an estimate of the expected frequency and dimensions (height, length, and width) of the visible cooling tower and/or exhaust stack plumes. Provide the supporting assumptions, meteorological data, operating parameters, and calculations used.	Pg. 5.13-30-34, sect. 5.13.4.5	Yes	
Appendix B (g) (6) (H)	If any landscaping is proposed to reduce the visual impacts of the project, provide a conceptual landscaping plan at a 1:40 scale (1"=40'). Include information on the type of plant species proposed, their size, quantity, and spacing at planting, expected heights at 5 years and maturity, and expected growth rates.	Pg. 5.13-29, sect. 5.13.4.4.5	No	It states in the AFC that landscaping is to be installed at the Primm Valley Golf Course as a mitigation measure. A conceptual landscaping plan(s) was not provided in the AFC. Please provide a conceptual landscaping plan at a 1:40 scale or other legible scale pre-approved by staff.

SITING REGULATIONS	INFORMATION	AFC PAGE NUMBER AND SECTION NUMBER	ADEQUATE YES OR NO	INFORMATION REQUIRED TO MAKE AFC CONFORM WITH REGULATIONS
Appendix B (g) (14) (iv)	If not using a zero liquid discharge project design for cooling and process waters, include the effects of the proposed wastewater disposal method on receiving waters, the feasibility of using pre-treatment techniques to reduce impacts, and beneficial uses of the receiving waters. Include an explanation why the zero liquid discharge process is "environmentally undesirable," or "economically unsound;	Waste Management, Section 2.2.9, p. 2-10 100 MW Water Balance Diagram, Figure 2.2-6 Operation Phase, Section 5.14.4.3.2, p. 5.15-13 Wastewater Discharge Requirements, Section 5.15.4.2.3, p. 5.15-17	Yes	
Appendix B (g) (14) (v)	If using fresh water, include a discussion of the cumulative impacts, alternative water supply sources and alternative cooling technologies considered as part of the project design. Include an explanation of why alternative water supplies and alternative cooling are "environmentally undesirable," or "economically unsound;	Water Requirements, Section 2.2.7.1, p. 2-7 Water Use, Section 5.15.3.3.2, p. 5.15-14 Cumulative Effects, Section 5.15.5, p. 5.15-20	Yes	
Appendix B (g) (14) (vi)	The effects of the project on the 100-year flood plain, flooding potential of adjacent lands or water bodies, or other water inundation zones; and	Flooding Potential, Section 5.15.4.2.5, p. 5.15-19	Yes	
Appendix B (g) (14) (vii)	All assumptions, evidence, references, and calculations used in the analysis to assess these effects.	Flooding Potential, Section 5.15.4.2.5, p. 5.15-19	Yes
