Dear, To whom it may concern

Why do you want to close down two power plants and waste money to create two more in Hayward? It doesn't make sense. Don't you think that you will be contributing to global warming. We are already experiencing heat waves and can see that global warming is taking place. The idea of telling people to stop using their fire place so you guys can come and pollute our air is not going to work Two power plants in Hayward is to much. And it is not easy living next to a power plant that can be very hazardous to children's health. The reason why you might want us to stop from using our fire places is so we can install a heating system in our houses and use more electricity and give you more business. But the reality is that not all people are made out of money. And can install a heating system. I read an article witch said that you were offering \$400 for every fire place retrofit. But I know that your using that more as an investment because all that money you will get it back in no time. I know that you might want to come here because you calculated that you can make more money if your located her in Hayward. Why else would you want to place not one but two power plants.

Sincerely,

Miguel Angel Nava
