In regards to: Tierra Energy Company & Calpine Corp. Proposed West Hayward power plants.

To Whom It May Concern:

Subject: Proposed Project of two West Hayward power plants.

I disagree with the proposals of two new power plants coming to the city of Hayward. The reason why I disagree in having power plants coming is because of this would add to global warming of our plant. Another reason is that harmful pollutions would further harm humans as well as animals. Rebates being offered to the eligible home owner out weigh the expense that it would actual cost.

My suggestion to both companies is that they instead save the money planed for rebates and in turn use that to employ earth friendly power plants. I suggest state of the art plant filtration systems, solar systems to power the plant, and recycled water pumped instrument to help produce power for the plant.

Respectfully,
Erika B. Cuevas
