---

Dear Chief Arfsten, Fire Marshal Berg, and HazMat Coordinator Murphy, Energy Commission staff has been directed by management to complete the Final Staff Assessment for the Eastshore Energy Center in October. Commission legal counsel has also advised staff that mitigation measures should be described in the FSA and not left "open-ended" for resolution after certification (should the Commissioners decide to license the power plant). Therefore, I am requesting that your analysis of impacts and proposed mitigation be e-mailed to me not later than the end of Monday October 8, 2007. If I do not receive your comments, analysis, and specific request for mitigation - including estimated costs of the requested mitigation such as upgrades to the Opticom System preliminarily discussed as a possible mitigation - I will not be able to include your views in the FSA.

Thank you for your cooperation.

Sincerely,

Alvin Greenberg
