Subject: Concerns on Hidden Hills

have had the pleasure to read all the complaints against the new Solar plant, basically a solar tower. I may not be a educated intervenor, nor do I have the luxury have access to the many documents nor the political power to make a difference but the long and short as a taxpayer of California who is a registered voter here is my response:

Over 30,000. residents of Pahrump and Charleston View have had more impact on the environment.

Septic systems

Unchecked growth

Home Depot and other stores which carry non-native plants and seeds

The City of Pahrump and Charleston View introduction of non-native insects etc.

The City of Pahrump and community of Charleston View introduction of non-native species such as cats, dogs birds etc.

Although wild horses and burros have been on U.S. territories since the discovery of American they are nevertheless non-native species which do impact the environment.

Humans can be considered a non-native species since they entered North American but reality is we are here.

Impacts on the environment which create change and have been in existence for millennia is the Jet Stream which carries seeds, birds and insects all non-native species.

In the larger scope of our solar system, and out of the solar system we have influences unbeknownst to us or are forgotten in our daily rituals.
