Dear Sirs:

Here is a brief comment. Return email to [electosavenegy@gmail.com](mailto:electosavenegy@gmail.com)

## Stop Quail Brush Power Facility

Albia miller June 27, 2012

Once again we must support the **Share the Job Program** which means:

Bill Gates and Warren Buffet underwrite the payroll of hiring twice as many people for every job so everyone in America will be at work close to home. Then, the insane developers in energy, housing, and commercial will not have to exist. You are supplying another power facility to power more housing and more commercial venues. We don't need more housing, we have a million foreclosed homes, we don't need more power if we aren't building shopping centers and housing especially in California. We don't need to increase global warming that all of this will cause. We need jobs in current arenas by **Share a Job** and be paid more and work half the hours because someone else comes on the other two or three days. The construction business will be replaced with the jobs already here.

This power plant won't be necessary because housing and shopping centers won't be being built in San Diego. The last thing we need is more housing and sports parks sprawling their way through wild open grass lands creating more global warming and increasing the heat coming out of California. That is schizophrenic, bipolar, psychopathic behavior on anyone elected or appointed representative that would approve such chaos and weather /climate mayhem. Look at Florida drowning in rain probably pushed off the west coast and landing in Florida. Then there are the terrible fires of Colorado we wouldn't want insurance companies to refuse to pay for the fires in Santé, Cedar Falls, etc. you of short term memory lost.

Leave the open space to the wildlife and native grasses and I would say to the Indians, however, they are caught up in developing.

If power is needed then turn to the alternatives that Edison needs to be involved in so they will quit whinning about lost of revenue for citizens doing the right thing---going alternatively for power. Edison needs to manufacture a state of art solar panel that they install. So we will have the benefits of insurance from an organized company.

The smoke stacks will chock the air, the view, and require wars to bring in the oil or coal.
