

Public Comment regarding the proposed Quail Brush Generation Project

I would like to make the following written comment. I understand that my comments will be docketed and may be posted on the Energy Commission's website and be available to the public.

If the Quail Brush Generation Project is built near the Mission Trails Regional Park, it would have a devastating effect on the park. The air and noise pollution would definitely negatively impact that nature preserve. Building another fossil fuel power plant is a mistake. California needs to lead the nation in new & innovative renewable energy sources. California leads the nation in ocean science, medical research and in technology. We have the capability to also lead in alternative energy sources. The CEC's own IEPR states that "PIER-funded research focused on wind & solar technology development, solar forecasting, solar, wind, geothermal & biomass resources. Helping renewable technologies reach maturity led to faster market penetration & ultimately to more renewable energy in the state's overall electricity portfolio." Renewable, alternative energy sources are the future.
