CEC

Gentlemen,

DATE	DEC 14 2009
RECD.	DEC 23 2009

I read recently that the commission was holding a workshop regarding the construction of a 255 m/w power plant at Lodi's sewage plant acreage.

I suggest that you put a hold on this plant until the proponents have considered using wind or solar power.

Lodi has the acreage to support a wind driven plant.

The westerly winds may support electrical generation during peak usage.

The proposed plant will have emission which the valley does not need.

Sincerely,

James A. McCarty
