DOCKET 08-AFC-2
DATE <u>JUL 11 2008</u>
RECD. <u>JUL 11 2008</u>

Purpose

The Energy Commission staff is currently analyzing the Beacon AFC for the proposed development of the Beacon Solar Energy Project. Staff published data requests on June 16, 2008 for the following technical areas: Air Quality, Biology, Cultural Resources, Socioeconomics, Soils, Transmission System Engineering, Waste Management and Water Resources. The staff workshop will focus on the Beacon applicant's data responses and work toward resolving project issues. Following the workshop, staff will consider the comments it receives and initiate preparation of the Preliminary Staff Assessment (PSA) containing a preliminary analysis of the project's environmental impacts, including recommendations for mitigation and conditions of certification.

Background

On March 14, 2008, the California Energy Commission received an AFC from Beacon Solar, LLC, a subsidiary of FPL Energy. The proposed project is a concentrated solar electric generating facility proposed on an approximately 2,012-acre site in eastern Kern County, California. The project would use parabolic trough solar thermal technology to produce electrical power using a steam turbine generator fed from a solar steam generator. The solar steam generator receives heated transfer fluid from solar thermal equipment comprised of arrays of parabolic mirrors that collect energy from the sun.
