Subject: STAFF'S DATA ADEQUACY RECOMMENDATION FOR THE REDONDO BEACH ENERGY PROJECT, (12-AFC-03)

Staff has completed its data adequacy review of the AFC and has determined that it does not meet all the requirements listed in Title 20 California Code of Regulations, section 1704, Appendix B (2007) for the 12-month process. Of the 23 technical disciplines reviewed, staff determined the information contained in the AFC is deficient in six areas which are: Air Quality, Biological Resources, Cultural Resources, Traffic and Transportation, Transmission System Design and Waste Management. Therefore, I recommend that the Energy Commission find the AFC incomplete and adopt the attached list of deficiencies.

On November 20, 2012, AES Southland, LLC submitted an Application for Certification (AFC) to construct and operate the Redondo Beach Energy Project (RBEP). The RBEP site is located at 1100 North Harbor Drive in the City of Redondo Beach, Los Angeles County, California.

The proposed RBEP is a natural gas-fired, combined-cycle, air-cooled 496-megawatt (MW) electrical generating facility that would be constructed on the site of, and eventually replace, the Redondo Beach Generating Station. RBEP would consist of one power block, composed of three natural gas combustion turbine generators with supplemental fired heat recovery steam generators, an air-cooled condenser to replace once-through cooling, and related ancillary equipment. RBEP would reuse the existing natural gas, water, wastewater, sewer, and high-voltage interconnections to the site. This would avoid the need to construct any new offsite linear facilities.

The Energy Commission staff has been in contact with the California Coastal Commission (CCC) pertaining to the Energy Commission certification process and timeline. The CCC participation will in accordance with the 2005 Memorandum of Agreement between the Energy Commission and the CCC regarding the CCC's statutory role in the Energy Commission's AFC proceedings.

On December 19, 2012 the City of Redondo Beach (City) submitted comments on its data adequacy review of the AFC. At this time, the City has identified fifteen specific areas of concern; Air Quality; Alternatives; Biological Resources ; Geologic Hazards and Resources; Hazardous Materials Handling; Land Use; Noise; Public Health; Socioeconomics; Soils; Traffic and Transportation; Transportation System Safety Nuisance; Visual Resources; Waste Management; and Water Resources. The City has

requested that the Energy Commission make a determination of data inadequate. Energy Commission staff believe that some of the information needs identified by the City go beyond the scope of informational requirements in the Energy Commission's regulations, and the Energy Commission staff will work with the City to prepare data requests that will be sent to the applicant immediately following acceptance of the AFC as complete pursuant to the Energy Commission's regulations.

Attached is a summary table and the data adequacy worksheets for all technical disciplines. The worksheets for the data inadequate sections identify the additional information that staff believes is necessary to complete the AFC in accordance with our regulations. At the Energy Commission's business meeting on January 9, 2013, I will recommend that the Energy Commission adopt the staff's list of deficiencies and not accept the AFC as complete until the additional information specified in the staff's data adequacy worksheets is supplied. If you have any questions, please call Patricia Kelly, staff's Project Manager, at (916) 654-4063.

Section 2.1 of Appendix 5.3B provides information on the present-day biota, geology, and climate of the project vicinity. Pages 2-2 and 2-3 of Appendix 5.3B state that some archaeological sites excavated at Redondo and Hermosa beaches are more than 5,000 years old. Paleoclimatic and archaeological research on the southern California coast indicates that significant environmental changes occurred over the last 5,000 years, including landform changes that would affect how the archaeological record formed and the marine resources available to human groups. These are critical issues for explaining the presence or absence of archaeological resources in the project area. Please provide a summary of local paleoenvironments minimally for the last 5,000 years and implications for the formation of the archaeological record, per the ARM R requirements. Key sources to consider include “Nineteenth Century Coastal Geomorphology of Southern California” in <i>Journal of Coastal Research</i> 22(4):847–861 and Chapter 2 of <i>California Prehistory: Colonization, Culture, and Complexity</i> .
