

Comments Regarding:
Redondo Beach Energy Project (12-AFC-03)

My family and I reside in the neighborhood of and directly downwind from the AES Redondo Beach Power Generating Station. We strongly object to the presence of a power generating station in Redondo Beach due to the particulate pollution it produces. Please understand that many thousands of Redondo Beach residents feel very strongly that they do not want the AES Redondo Beach Energy Project to be approved.

Many decades ago when the power generating station was originally built here, Redondo Beach was sparsely populated. Now, it is in a very densely populated neighborhood where it is entirely inappropriate. A large percentage of Redondo Beach voters recently signed an initiative stating that we do not want a new power plant built here. In response the local AES management has been paying local civic leaders to speak on their behalf to scare local residents from supporting the movement that insists we want no new power generating station here.

We want the major source of air pollution in our area to be removed and not replaced. We want cleaner air. We want the land to be used for projects more in line with our coastal community. Most importantly, we do not want the **increased** particulate pollution that would be produced by a new AES Redondo Beach Power Generating Station. Please **do not approve the Redondo Beach Energy Project (12-AFC-03).**
