Subject: Start-Up Dates and Workforce Information For Sunrise PowerlinkProject
Attachments: Figure B-43_Construction Labor graph.pdf

Hi Joe. I'm the Sunrise Powerlink Technical Project Manager. Mike requested I follow up on your questions. The following are responses to your questions:

1. estimated dates of construction and expected operating life of the project.

Sunrise has two main alternative routes with multiple small segment options. The two main alternative routes are a northern route and a southern route. The estimated in-service date for the northern route is June 2011 and the estimate in-service date for the southern route is June 2012. The expected operating life based on the book life filed is 58 years. To be clear, the 58 years is the weighted average book life.

2. monthly estimates of total construction labor force including the monthly peak construction workforce. An estimate of the peak monthly construction labor force is the most important statistic.

The attached (Figure B-43) estimated peak monthly labor force graph can be found in the Sunrise Draft EIR/EIS. The graph reflects a previously estimated in-service date of June 2010. For a 2011 or a 2012 in-service date, the monthly peak labor force estimation would need to be shifted to later years. These monthly labor force estimates are based on the best assumptions SDG&E can make at this time. It is important to note the actual monthly labor force counts may vary to accommodate mitigation and other construction constraints.

3. operational workforce (number).

40 - 50 people per year

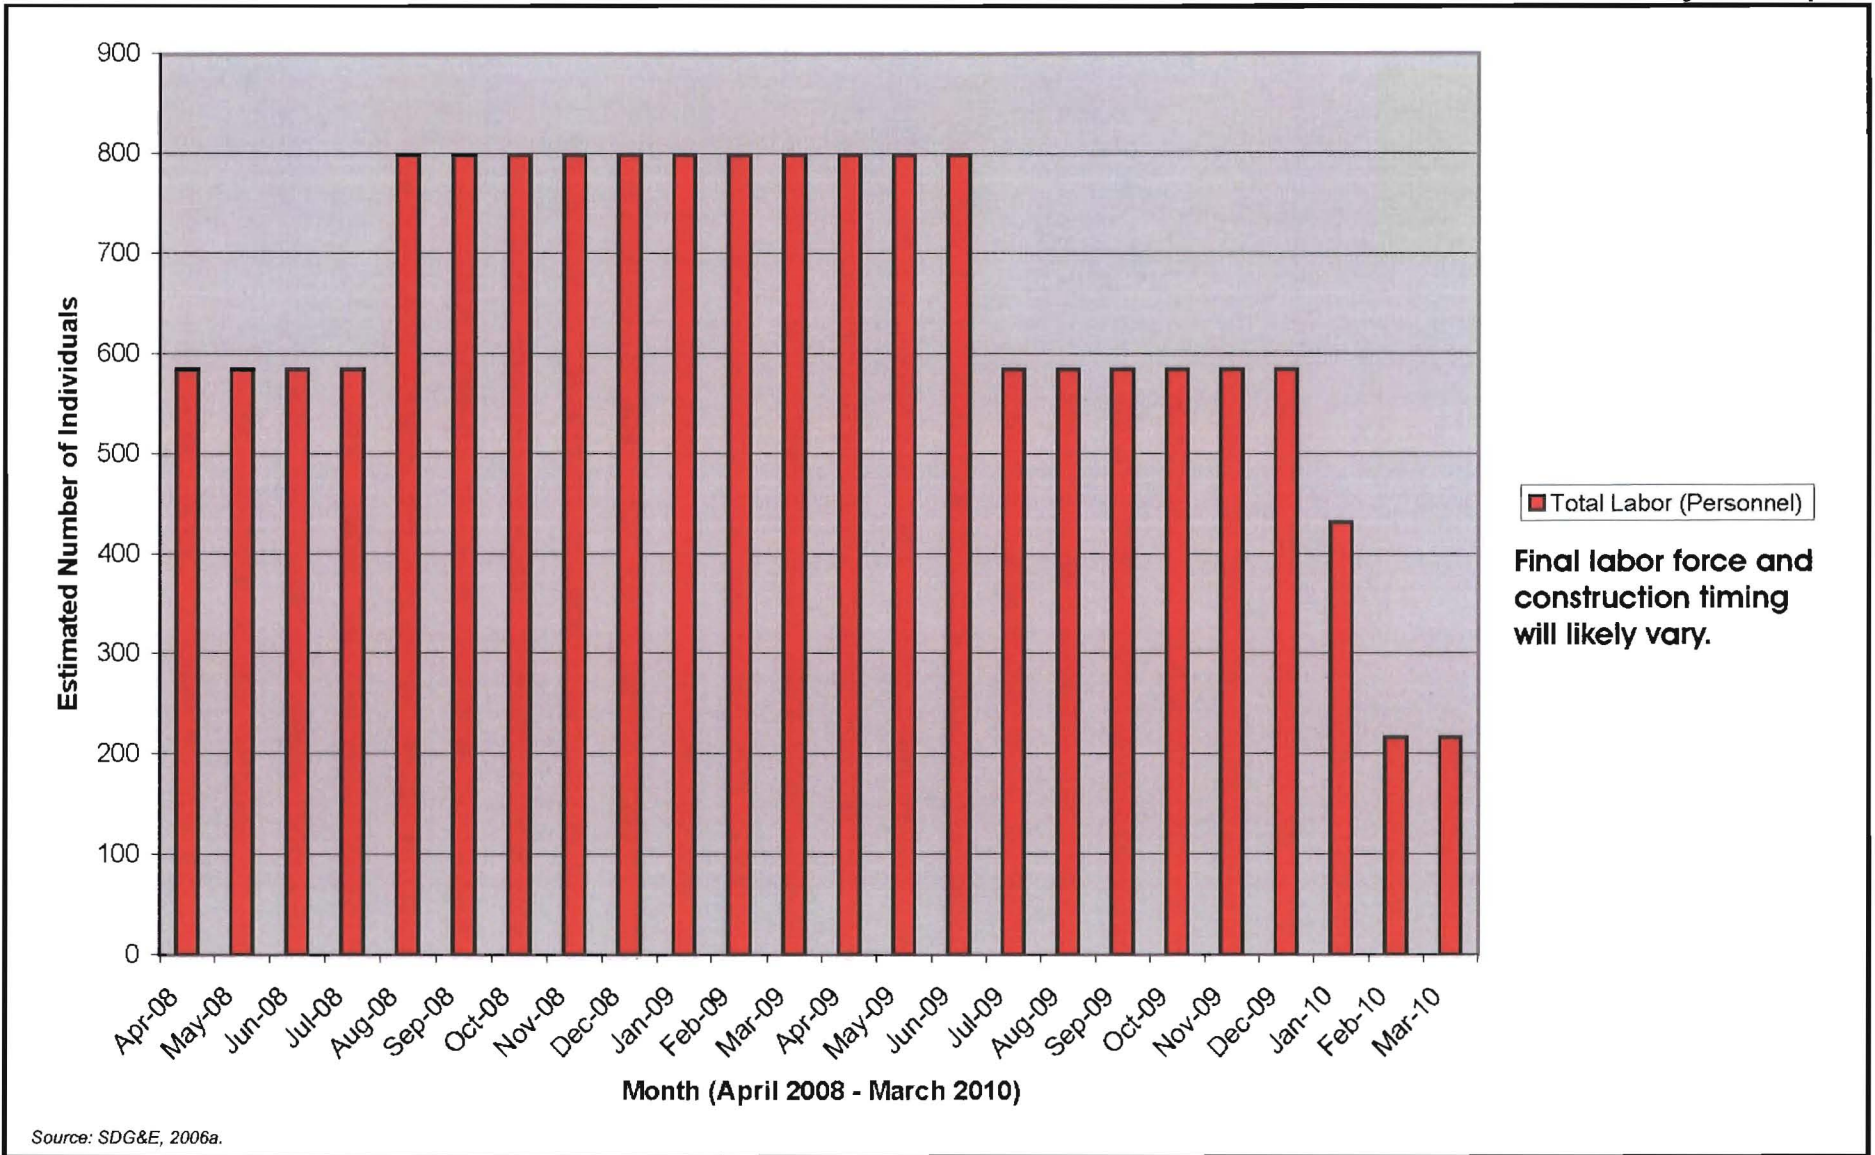

Please let me know if you have any further questions.

Jonathan Woldemariam P.E.
