Phase 1 Environmental Site Assessment Regulatory Records Update, Tracy Peaking Plant

June 18, 2008

Mr. Mark Kehoe GWF Energy LLC 4300 Railroad Avenue Pittsburg, California 94565

Subject:

Phase I Environmental Site Assessment – Regulatory Records Update

Tracy Peaker Plant

14950 West Schulte Road

Tracy, California

MACTEC Project Number: 4088087526-01

Dear Mr. Kehoe:

MACTEC Engineering and Consulting, Inc. (MACTEC) is submitting this Environmental Site Assessment Update letter report to GWF Energy LLC (GWF) to update our June 28, 2003 *Phase 1 Environmental Site Assessment Update, Tracy Peaker Plant* (Previous ESA) for the Tracy Peaker Plant located at 14950 West Schulte Road in Tracy, California (Site).

This ESA Update has utilized information contained in the Previous ESA (Attachment 1) to evaluate changes in the environmental conditions at the Site from July 23, 2003 (previous Site visit) to the present. The Site presently consists of approximately 40 acres. The Tracy Peaker Plant facility occupies nine acres at the Site.

Based on our May 16, 2008 telephone conversations and your May 21, 2008 e-mail, MACTEC performed an update of Site regulatory records only. Performing an ESA Update using guidance (which would include a Site visit) as defined in American Society for Testing and Materials (ASTM) Standard E1527-05, Standard Practice for Environmental Site Assessments, Phase I Environmental Site Assessment Process was not requested.

SCOPE OF WORK

As mentioned above, the purpose of this ESA Update is to document changes in regulatory records for the Site and surrounding area for the time from July 23, 2003 to the present. To meet this objective, MACTEC performed the following scope of work:

 Task 1 - Performed an agency records review to identify and evaluate potential sources of hazardous and/or toxic materials on or adjacent to the Site utilizing ASTM E1527-05 as a guideline. MACTEC assessed whether generation, use, handling, storage, or disposal of hazardous materials identified in the regulatory reports has created a potential to impact the Site conditions and/or require Site mitigation. June 18, 2008 Project 4088087526 Mr. Mark Kehoe GWF Energy LLC Page 2

• Task 2 - Prepared this letter report to summarize the findings of our agency records review for the Site.

BACKGROUND

Harding ESE performed an initial ESA at the Site in June 2001 (*Harding ESE, 2001*). According to the June 2001 ESA, the Site and surrounding area was used for agricultural purposes from at least 1957 (the date of the earliest available United States Geological Survey [USGS] topographic map) through the time of the Site visit in June 2001. The ESA stated the following conclusions regarding the Site:

- The Site was fallow and appeared to have been used previously for agricultural purposes. No historic environmental concerns were reported for the Site.
- The Site was inspected including a walk-through and visual observations. No recognized environmental conditions were identified onsite or at offsite adjacent or nearby properties.
- A review of the published governmental agency lists identified no adjacent or nearby properties with recognized environmental conditions that were likely to impact the Site.
- There were no recognized environmental conditions, as defined by ASTM, present at the thenproposed Tracy Peaker Plant facility located south of the Southern Pacific Railroad and north of the Delta-Mendota Canal in Tracy, California.

In December 2002, MACTEC performed an update of the June 2001 ESA. The December 2002 update consisted of a Site visit and review of an updated governmental agency database. At that time, the Tracy Peaker Plant was under construction. The update did not identify any change in the environmental conditions at the Site from those reported in the previous ESA and no recognized environmental conditions were identified for the Site.

In July 2003, MACTEC performed an update of the December 2002 ESA. The July 2003 update consisted of a Site visit and review of an updated governmental agency database. The update did not identify any changes in the environmental conditions at the Site from the December 2002 update. MACTEC did not identify any recognized environmental conditions for the Site.

RESULTS

Site History

Based on conversations with Site personnel, the development of the Tracy Peaker Plant facility began in August 2002. No indication of environmental concerns was noted during construction of the facility.

June 18, 2008 Project 4088087526 Mr. Mark Kehoe GWF Energy LLC Page 3

On June 11, 2001, Harding ESE (now known as MACTEC) collected five near-surface soil samples in the northwestern corner of the property to evaluate whether residual pesticides or herbicides were present in onsite soil from the historic agricultural activities at the property. Results of the assessment identified the Organochlorine pesticide compounds 4,4'-DDE and 4,4'-DDT in one sample at concentrations of 0.20 and 0.11 milligrams per kilogram (mg/kg) respectively. Additionally, the chlorinated herbicide compound 2,4-DB was detected in soil samples at concentrations ranging between 35 and 92 micrograms per kilogram (µg/kg). No other herbicide or pesticide compounds were detected in the surface soil samples collected.

The DDE and DDT concentrations were below the United States Environmental Protection Agency (EPA), Region IX Preliminary Remediation Goal (PRG) of 12 mg/kg (for both DDE and DDT) for soil in an industrial setting. There are no established cleanup criteria for 2,4-DB. However, 4-(2,4-Dichorophenoxy) butyric acid has the same CAS Number as 2,4-DB, and therefore would be considered synonymous with 2,4-DB. The detected concentrations of 2,4-DB were below the most stringent PRG (Residential; 490 mg/kg) for 4-(2,4-Dichorophenoxy) butyric acid. On the basis of the results of the sampling Harding ESE concluded that no further work was warranted at the Site, and construction activities at the Site would not require any special soil handling or construction personnel protection precautions. Results of this evaluation were presented in a letter report to GWF dated July 2, 2001.

Agency Records Review

Regulatory agency database information was obtained from Environmental Data Resources, Inc. (EDR). The EDR Radius Map Report maps and lists properties in government and state environmental databases with existing conditions or status that may have the potential to impact the Site. The EDR report dated June 5, 2008 is provided as Attachment 2.

The Site was listed in the EDR report on the California EPA's Hazardous Waste Information System (HAZNET) and U.S. EPA's Facility Index System (FINDS) lists. The Site was included on these lists due to disposal of liquids with ph of less than 2.0, unspecified oil-containing waste and organic liquid mixtures, other organic solids, and empty containers. Inclusion on the HAZNET and FINDS lists implies the Site properly managed and disposed of hazardous waste. No violations were noted in the EDR report in connection with these disposal practices. No new issues were identified in the June 5, 2008 database search that would be considered a recognized environmental concern to the Site.

CONCLUSIONS

MACTEC has conducted an ESA Update of regulatory records for the Tracy Peaker Plant located at 14950 West Schulte Road in Tracy, California. Our review of the updated regulatory records did not identify any change in the environmental conditions at the Site from the previous ESA update. MACTEC did not identify any recognized environmental conditions for the Site.

June 18, 2008 Project 4088087526 Mr. Mark Kehoe GWF Energy LLC Page 4

MACTEC greatly appreciates this opportunity to provide environmental services to GWF. Please call Gary Lieberman at (707) 793-3858 if you have questions or require additional information.

Yours very truly,

Environmental Site Assessment Update Tracy Peaker Plant 14950 West Schulte Road Tracy, California

Dear Mr. Kehoe:

This letter serves as MACTEC Engineering and Consulting, Inc.'s (MACTEC) and GWF Energy LLC (GWF) consent and acknowledgment that successor(s) and assignee(s) of GWF may use the report titled *Environmental Site Assessment Update, Tracy Peaker Plant, 14950 West Schulte Road Tracy, California* dated August 5, 2003, prepared for GWF, 4300 Railroad Avenue, Pittsburg, California 94565. The successor(s) and assignee(s) are entitled to rely upon this report to the same extent as GWF.

This report was prepared as of the date of August 5, 2003, pursuant to ASTM Standard E 1527-00 and may not reflect current typical conditions at the Site to the extent that conditions at the Site have changed since the report was prepared. In relying on this report, it is understood that the successor(s) and assignee(s) agrees to the limitation of liability contained in the contract between MACTEC and GWF under which the report was prepared. Successor(s) and assignee(s) acknowledges that they are aware that MACTEC makes no warranties or representations, and has no obligation to advise the successor(s) and assignee(s) regarding changes that may have occurred at the property addressed in the report or any changes in applicable laws and regulations that may have occurred subsequent to the signing of the report. This letter confers upon no third party, other than the specifically GWF approved successor(s) and assignee(s), the right to rely upon the information contained in the report or this letter.

Yours very truly,

MACTEC Engineering and Consulting, Inc.

Mr. Mark Kehoe GWF Energy LLC 4300 Railroad Avenue Pittsburg, California 94565

Environmental Site Assessment Update Tracy Peaker Plant 14950 West Schulte Road Tracy, California

Dear Mr. Kehoe:

MACTEC Engineering and Consulting, Inc. (MACTEC) is submitting this Environmental Site Assessment Update Number 2 (ESA Update No. 2) letter report to GWF Energy LLC (GWF) to update the *Phase 1 Environmental Site Assessment Update, GWF Power System, Tracy Peaker Plant,* located at 14950 West Schulte Road, Tracy, California (Previous ESA), prepared by MACTEC, dated February 25, 2003. This ESA Update No. 2 of the Site has utilized information contained in the Previous ESA (Attachment 1) and additional investigation to evaluate the changes in the environmental conditions at the Site from December 19, 2002, (previous Site visit), to the present. The Site presently consists of approximately 40 acres, 9 of which are developed with the Tracy Peaker Plant.

SCOPE OF WORK

As mentioned above, the purpose of this ESA Update No. 2 is to document environmental issues for the time period December 19, 2002, to the present. To meet this objective, MACTEC performed the following scope of work:

- Task 1 Performed interviews, a Site visit, and agency records review to identify and evaluate potential sources of hazardous and/or toxic materials on or adjacent to the Site utilizing ASTM E1527-00 as a guideline. MACTEC assessed whether generation, use, handling, storage, or disposal of hazardous materials has created a potential impact on Site conditions and/or require site mitigation.
- Task 2 Prepared this letter report to summarize conditions at the Site.

BACKGROUND

Harding ESE (now known as MACTEC) performed an initial ESA at the Site in June 2001 (*Harding ESE*, 2001). According to the ESA, the Site and surrounding area was used for agricultural purposes from at least 1957 (the date of the earliest available United States Geological Survey [USGS] topographic map) through the time of the Site visit in June 2001. This ESA stated the following conclusions regarding the subject Site:

- The Site was fallow and appeared to have been used previously for agricultural purposes. No historic environmental concerns were reported for the Site.
- The Site was inspected, including a walk-through and visual observations, and no recognized environmental conditions were identified onsite or at offsite adjacent or nearby properties.
- A review of the published governmental agency lists identified no adjacent or nearby properties with recognized environmental conditions that are likely to impact the subject Site.
- There were no recognized environmental conditions, as defined by ASTM, present at the thenproposed Tracy Peaker Plant Site located south of Southern Pacific Railroad and north of Delta-Mendota Canal in Tracy, California.

In December 2002, MACTEC performed an update of the July 2001 ESA which consisted of a site visit and review of an updated governmental agency database. At that time, the Peaker Plant was still under construction. The update did not identify any change in the environmental conditions at the Site from the previous ESA and no recognized environmental conditions for the Site were identified.

RESULTS

Site Visit

Mr. Gary Stone of MACTEC visited the Site on July 23, 2003. Mr. Stone also interviewed Mr. Ron Sichau for details since our visit in December 2002. Mr. Sichau was not aware of any environmental incidents (spills or illegal/unauthorized dumping of hazardous materials/wastes) having occurred at the facility. Photographs taken during the Site visit are captioned and presented in Attachment 2. The Tracy Peaker Plant was placed into commercial service on May 31, 2003. Construction was completed on July 1, 2003.

The facility is used for the generation of electric power when there is an increase in the demand for power. The facility consists of two turbines (1 & 2) and an associated control room, a transformer and switchyard, 250,000 gallon demineralized and raw water tanks, 9,000-gallon aqueous ammonia tank, and administration/maintenance building.

Potentially hazardous materials are stored on site in the following quantities:

- 9,000 gallons of aqueous ammonia in a aboveground double-walled storage tank (AST) and associated 10,000-gallon spill containment underground storage tank (UST) adjacent to the AST
- One 4,000-gallon underground three-stage oil/water separator. The unit is considered a sump and is constructed of concrete.
- Two 3,500-gallon underground recovery storage tanks for turbine wash water
- 3,100-gallon hydraulic oil reservoir associated with the turbines
- 3,100-gallon lubricant oil reservoir associated with the turbines
- One-400-gallon diesel fuel tank for the emergency diesel generator unit. The AST is surrounded by a concrete berm designed to fully contain any potential release from the tank
- Two-oil filled main transformers (12,885-gallons each) and one auxiliary oil-filled transformer (1,144-gallons) with secondary containment. Due to the age of the facility, it is unlikely that the transformer oil contains polychlorinated biphenyls (PCBs); no labels or markings indicating the presence of PCBs were apparent.
- Two 1,000-gallon propylene glycol reservoirs associated with the lube oil cooling system with secondary containment.
- 3,000 pounds of sulfuric acid in wet cell batteries.

Turbine cleaning solution (approximately 55-gallons) is stored in a self-contained covered pallet between the turbines, Chlorine (approximately 100-gallons stored in a polyethylene tank) and small quantities of waste oil and oily debris (stored on self-contained pallets) are stored in the Water Treatment Shed (Plate 2).

Each UST is double walled fiberglass with interstitial monitoring. The aqueous ammonia spill containment UST is utilized as an emergency containment reservoir. All drains in the equipment area of the facility drain to the oil water separator system located at the north end of the facility. Water collected in perimeter storm water drains is conveyed to the retention basin.

Sanitary waste from the facility passes through a lift station on the west side of the administration/maintenance building into a septic tank and associated leach field, also located just west of the administration/maintenance building.

No imminently hazardous conditions were observed at the Site. Materials with the potential to cause serious environmental harm were properly contained in secondary containment. During the Site visit, MACTEC saw no evidence of the following potential hazards on the Site:

- Stained soil
- Stressed vegetation
- Solid waste disposal
- Obvious odors

Adjacent Property Use

MACTEC performed a drive-by reconnaissance of the properties adjacent to the Site to observe businesses that may use, store, generate, or dispose of hazardous materials. The Tracy Pacific Gas and Electric (PG&E) Transfer Station is located north and adjacent to the Site. Further north across the Southern Pacific railroad tracks are the Owens Brockway and Tracy Biomass facilities. The Delta-Mendota Canal is located along the southwest edge of the Site with a dirt path running between the canal and the Site. Agricultural properties are located south and east of the Site. Based on the site review, the adjacent properties do not appear to be of environmental concern at this time.

Site History

Based on conversations with Site personnel, the development of the peaker plant facility began in August 2002. No indications of environmental concerns were noted during construction of the facility.

On June 11, 2001, Harding ESE collected five near surface soil samples in the northwestern corner of the property to evaluate whether residual pesticides/herbicides were present in onsite soil from the historic agricultural activities at the property. Results of the assessment identified the organochlorine pesticide compounds 4,4'-DDE and 4,4'-DDT in one sample at concentrations of 0.20 and 0.11 milligrams per kilogram (mg/kg) respectively. Additionally, the chlorinated herbicide compound 2,4-DB was detected in soil samples at concentrations ranging between 35 and 92 micrograms per kilogram (µg/kg). No other herbicide or pesticide compounds were detected in the surface soil samples collected.

The DDE and DDT concentrations were below the United States Environmental Protection Agency (EPA), Region IX Preliminary Remediation Goal (PRG) of 12 mg/kg (for both DDE and DDT) for soil in an industrial setting. There are no established cleanup criteria for 2,4 DB. However, 4-(2,4-Dichorophenoxy) butyric acid has the same CAS Number as 2,4 DB, and therefore would be considered synonymous with 2,4 DB. The detected concentrations 2,4 DB were below the lowest PRG (Residential; 490 mg/kg) for 4-(2,4-Dichorophenoxy). On the basis of the results of the sampling Harding ESE concluded that no further work was warranted at the Site, and construction activities at the Site would not require any special soil handling or construction personnel protection precautions. Results of this evaluation were presented in a letter report to GWF dated July 2, 2001.

Agency Records Review

Regulatory agency database information was obtained the from Environmental Data Resources, Inc. (EDR) Radius Map Report, which maps and lists properties in government and state environmental databases with existing conditions or status that may have the potential to impact the Site. The EDR report is provided as Attachment 2.

The Site was not listed in the EDR report. The Owens–Illinois (Brockway) Glass Container facility, located approximately 1,000 feet north and downgradient of the facility shows up on multiple regulatory lists including the Leaking Underground Storage Tank (LUST) and Cortese lists. According to EDR records, a release associated with a gasoline tank occurred at the facility in the mid 1990's. No additional information was available regarding the extent of the release. The case was granted closure in June 2002. Because this facility is downgradient and has received case closure, it is not considered a potential hazard to the subject Site.

CONCLUSIONS

MACTEC conducted an ESA Update No. 2 of the Tracy Peaker Plant located at 14950 West Schulte Road in Tracy, California, on July 23, 2003. The ESA Update No. 2 did not identify any change in the environmental conditions at the Site from the previous ESA. MACTEC did not identify any recognized environmental conditions for the Site.

MACTEC greatly appreciates this opportunity to provide environmental services to GWF. Please call Mr. Gary Lieberman at (415) 884-3158 if you have questions or require additional information.

Yours very truly,

MACTEC Engineering and Consulting, Inc.

Environmental Site Assessment Update Tracy Peaker Plant 14950 West Schulte Road Tracy, California

Dear Mr. Kehoe:

MACTEC Engineering and Consulting, Inc. (MACTEC; formerly known as Harding ESE Inc.) is submitting this Environmental Site Assessment Update (ESA Update) letter report to GWF Energy LLC (GWF) to update the *Phase 1 Environmental Site Assessment, GWF Power System, Tracy Peaker Plant,* located at 14950 West Schulte Road, Tracy, California (Previous ESA), prepared by Harding ESE, dated July 2, 2001. This ESA Update of the Site has utilized information contained in the Previous ESA (Attachment 1) and additional investigation to evaluate the changes in the environmental conditions at the Site from June 20, 2001, to the present. The Site presently consists of approximately 40 acres, 9 of which are currently being developed with the Tracy Peaker Plant.

SCOPE OF WORK

As mentioned above, the purpose of this ESA Update is to document environmental issues for the time period July 2, 2001, to the present. To meet this objective, MACTEC performed the following scope of work:

- Task 1 Performed interviews, a Site visit, and agency records review to identify and evaluate
 potential sources of hazardous and/or toxic materials on or adjacent to the Site utilizing
 ASTM E1527-00 as a guideline. MACTEC assessed whether generation, use, handling, storage, or
 disposal of hazardous materials has created a potential to impact Site conditions and/or require site
 mitigation.
- Task 2 Prepared this letter report to summarize conditions at the Site.

BACKGROUND

According to the Previous ESA, the Site and surrounding area was used for agricultural purposes from at least 1957 (the date of the earliest available United States Geological Survey [USGS] topographic

map) through the time of the Site visit. The Previous ESA stated the following conclusions regarding the subject Site:

- The Site was fallow and appeared to have been used previously for agricultural purposes. No historic environmental concerns were reported for the Site.
- The Site was inspected including a walk-through and visual observations and no recognized environmental conditions were identified onsite or at offsite adjacent or nearby properties.
- A review of the published governmental agency lists identified no adjacent or nearby properties with recognized environmental conditions that are likely to impact the subject Site.
- There were no recognized environmental conditions, as defined by ASTM, present at the proposed Tracy Peaker Plant Site located South of Southern Pacific Railroad and North of Delta-Mendota Canal in Tracy, California.

RESULTS

Site Visit

MACTEC visited the Site on December 18, 2002. Mr. Jason House, of MACTEC was escorted by Mr. Carl Levesque, GWF Project Mechanical Engineer. Mr. House also interviewed Mr. Levesque for details since our visit in June 2001. The results of the Site visit have been incorporated in to the text as applicable.

Mr. Levesque was not aware of any environmental incidents (spills or illegal/unauthorized dumping of hazardous materials/wastes) having occurred at the facility. However, according to Mr. Ross Carroll, Project Compliance Manager for the Tracy Peaker Plant, two minor release incidents have occurred at the facility. In September 2002, a release of approximately 10 gallons of hydraulic fluid from a cement mixer to the ground surface occurred at the Site. The impacted soil was excavated, transferred to 55-gallon drums, and sampled to determine disposal alternatives. In October 2002, the soil was disposed of by EnVectra as non-hazardous waste. A release of acid from a battery also occurred in September 2002 when a fork lift punctured a battery cell at the switchyard building. The soil was also removed, contained and sampled. Based on initial sample results, the soil was treated with soda ash and resampled. Disposal of the soil as a non-hazardous waste is now pending.

The Peaker Plant facility is south of and adjacent to the Southern Pacific Railroad tracks and north and adjacent to the Delta-Mendota Canal, between South Lammers Road and Hansen Road, and south of West Schulte Road. The Tracy Pacific Gas and Electric (PG&E) Transfer Station is located north and adjacent to the Site. At the time of the Site visit, the facility was under construction with all equipment and structures in place with the exception of the facility aboveground storage tanks (ASTs). According to Mr. Levesque, as of the week ending January 28, 2003, the project is 75.9% complete on the basis of the Field Progress Measurement System. All underground drains and utilities are currently in place with one remaining storm water drain tie to the main retention pond remaining. This will be completed when

the final grading is done. Per the schedule, the anticipated construction completion date is March 28, 2003.

When complete, the facility will be used for the generation of electric power when there is an increase in the demand for power. The facility will consist of two turbines (1 & 2) and associated control room, a transformer and switchyard, 250,000 gallon demineralized and raw water tanks, 9,000 gallon aqueous ammonia tank, and administration/maintenance building.

Hazardous materials will be stored on site in the following quantities:

- 9,000 gallons of aqueous ammonia in a aboveground double-walled storage tank (AST)
- Three underground storage tanks (USTs) as follows:
 - One 3,500-gallon oily water UST (part of oil water separator system)
 - Two 3,500-gallon turbine wash water USTs
 - One 10,000-gallon spill containment UST adjacent to the aqueous ammonia AST
- Two 3,300-gallon turbine hydraulic oil reservoirs associated with the turbines
- One-200-gallon diesel fuel tank for the emergency diesel generator unit.
- Two oil filled main transformers (12,885-gallons each) and one auxiliary oil filled transformer (1,144-gallons) with secondary containment. Due to the age of the facility it is unlikely that the transformer oil will contain polychlorinated biphenyls.

Water treatment system chemicals consisting of sodium hypochlorite are stored in two drums (approximately 65 and 55 gallons each) located in the hazardous material storage area and small quantities of oil and hydraulic fluid will be stored on site in 55 gallon drums as needed.

Each UST is double walled fiberglass with interstitial monitoring. The aqueous ammonia spill containment UST is utilized as an emergency containment reservoir. All drains in the machine area of the facility drain to the oily water UST before entering the oil water separator located at the north end of the facility. Water collected in perimeter storm water drains will be conveyed to the retention basin.

Sanitary waste from the facility will pass through a lift station on the west side of the administration/maintenance building into a septic tank and associated leach field also located just west of the administration/maintenance building.

No imminently hazardous conditions were observed at the Site. Construction materials with the potential to cause serious environmental harm were properly contained in secondary containment. During the Site visit, MACTEC saw no evidence of the following potential hazards on the Site:

- Natural ponds or lagoons
- Stained soil
- Stressed vegetation
- Solid waste disposal
- Obvious odors

Adjacent Property Use

MACTEC performed a drive-by reconnaissance of the properties adjacent to the Site to observe businesses that may use, store, generate, or dispose of hazardous materials. Southern Pacific Railroad tracks are north and adjacent to a manufacturing facility further north beyond the tracks. The Delta-Mendota Canal is located along the southwest edge of the Site with a dirt path running between the canal and the Site. Agricultural properties are located south and east of the Site. Based on the site review, the adjacent properties do not appear to be of environmental concern at this time.

Site History (July 2, 2001, to the Present)

Based on conversations with Site personnel, the development of the peaker plant facility began in August 2002. No indications of environmental concerns were noted during construction of the facility.

On June 11, 2001, Harding ESE collected five near surface soil samples in the northwestern corner of the property to evaluate whether residual pesticides/herbicides were present in onsite soil from the historic agricultural activities at the property. Results of the assessment identified the organochlorine pesticide compounds 4,4'-DDE and 4,4'-DDT in one sample at concentrations of 0.20 and 0.11 milligrams per kilogram (mg/kg) respectively. Additionally, the chlorinated herbicide compound 2,4-DB was detected in soil samples at concentrations ranging between 35 and 92 micrograms per kilogram (µg/kg). No other herbicide or pesticide compounds were detected in the surface soil samples collected.

The DDE and DDT concentrations were below the United States Environmental Protection Agency (EPA), Region IX Preliminary Remediation Goal (PRG) of 12 mg/kg (for both DDE and DDT) for soil in an industrial setting. There are no established cleanup criteria for 2,4 DB, ; however, 4-(2,4-Dichorophenoxy) butyric acid has the same CAS # as 2,4 DB, and therefore would be considered synonymous with 2,4 DB. The detected concentrations 2,4 DB were below the lowest PRG (Residential; 490 mg/kg) for 4-(2,4-Dichorophenoxy). On the basis of the results of the sampling Harding ESE concluded that no further work was warranted at the Site and construction activities at the Site would not require any special soil handling or construction personnel protection precautions. Results of this evaluation were presented in a letter report to GWF dated July 2, 2001.

Agency Records Review

Regulatory agency database information was obtained the from Environmental Data Resources, Inc. (EDR) EDR Radius Map Report, which maps and lists properties in government and state environmental databases with existing conditions or status that may have the potential to impact the Site. The EDR report is provided as Attachment 2.

The Site was not listed in the EDR report. No new properties were identified on databases that would be considered a recognized environmental concern to the Site.

CONCLUSIONS

MACTEC conducted an ESA Update of the Tracy Peaker Plant located at 14950 West Schulte Road in Tracy, California, on December 18, 2002. The ESA Update did not identify any change in the environmental conditions at the Site from the previous ESA. MACTEC did not identify any recognized environmental conditions for the Site.

MACTEC greatly appreciates this opportunity to provide environmental services to GWF. Please call Mr. Gary Lieberman at (415) 884-3158 if you have questions or require additional information.

Yours very truly,

MACTEC Engineering and Consulting, Inc.

1.0 EXECUTIVE SUMMARY

Project Details

This report presents the results of Harding ESE, Inc.'s (Harding ESE) Phase I Environmental Site Assessment (ESA) for the future GWF Power Systems (GWF) property located south of and adjacent to the Southern Pacific Railroad tracks and north and adjacent to the Delta-Mendota Canal, between South Lammers Road and Hansen Road, and south of West Schulte Road, in the city of Tracy, San Joaquin County, California (Site). Harding ESE conducted this ESA for GWF Power Systems (GWF), who are considering constructing a peaker power facility on the Site. Ms. Susan Lewos of Harding ESE conducted the ESA.

The purpose of the Phase I ESA was to identify environmental conditions at the Site using guidance provided by the American Society for Testing and Materials (ASTM) Standard E 1527-00, *Standard Practice for Environmental Site Assessments*.

The scope of work for the Phase I ESA included conducting a Site visit and area reconnaissance; obtaining and reviewing an environmental regulatory agency database report; reviewing historical aerial photographs; reviewing site-specific documents provided by GWF; evaluating the data; and preparing this report.

Site Summary

- The Site is approximately 40 acres and is located between South Lammers and Hansen roads, south of West Schulte Road, and south of and adjacent to the Southern Pacific Railroad and north of and adjacent to Delta-Mendota Canal, approximately 1.0 mile north of Interstate 580.
- The Site is fallow and appears to have been used previously for agricultural purposes.
- Historical information for the Site shows that it has been used for agricultural purposes since at least 1957 (the date of earliest available historical aerial photograph from Environmental Data Resources).
- According to the United States Department of Agriculture Soil Survey for San Joaquin County presented in the Environmental Data Resources Report, soils in the area of the Site (upper 5 feet) are listed as "CAPAY", clay with very slow infiltration rates, and moderately well drained.
- Information from the California Department of Water Resources indicates that groundwater in the Site vicinity is approximately 10 to 25 feet below ground surface (bgs). However, the soil survey indicates that the ground water table may be located 3-6 feet below ground surface.
- The Site was not listed under any category in the environmental regulatory agency database report.

Status of Electrical Transformers

• No transformers or other electrical equipment with potentially PCB containing oils were observed on the Site, however the Tracy Substation is located north and adjacent to the Site. No reported releases or spills have occurred at the substation.

Asbestos-Containing Materials and Lead-Based Paint

• No structures were observed on the Site. Therefore, asbestos containing materials and lead-based paint are not an environmental concern at the Site.

Radon

• The EPA has established an "action level" for radon designated as 4 picoCuries per liter of air (pCi/L). EPA sponsored studies of average radon values measured in San Joaquin County indicate average radon levels are approximately 2.200 pCi/L in the region. Therefore, it is unlikely that radon poses a significant environmental concern at the Site.

Pesticides

• Since the Site has historically been used for agricultural purposes, the probability of pesticides in the soil is highly likely. Soil samples were collected at the Site under a different scope of work. Sample results will be provided under separate cover.

Offsite Issues

• Review of the environmental regulatory agency database report indicates that no offsite properties pose a significant environmental threat to the Site.

This assessment has revealed no evidence of recognized environmental conditions as defined by ASTM.

2.0 INTRODUCTION

This report presents the results of Harding ESE's Phase I ESA for GWF Power Systems, Tracy Peaker, south of and adjacent to the Southern Pacific Railroad tracks and north of and adjacent to the Delta-Mendota Canal, Tracy, San Joaquin County, California (Site; Plate 1)

2.1 Purpose and Scope of Work

The purpose of the Phase I ESA is to identify recognized environmental conditions at the Site, as defined by the American Society for Testing and Materials (ASTM) Standard E 1527-00, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process:

The term *recognized environmental conditions* means the presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, groundwater, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

The objective of the Phase I ESA was to identify environmental conditions at the Site using as guidance ASTM Standard E 1527-00. The scope of work for the Phase I ESA included the following activities:

- Completed a Site visit on June 11, 2001. Site photographs are in Appendix A
- Reviewed information provided by GWF
- Obtained and reviewed historical topographic maps from Environmental Data Resources, Inc. (Appendix B)
- Reviewed historical aerial photographs provided by Environmental Data Resources, Inc. (EDR) of the Site and its vicinity (Appendix B)
- Obtained and reviewed an environmental regulatory agency database report from EDR (Appendix C)
- Evaluated the data from the above activities
- Prepared this report.

2.2 Special Terms and Conditions

This document was prepared for the use of GWF. No other party should rely on the information contained herein without the prior written consent of GWF, and Harding ESE. The interpretation, discussion and conclusions presented in this report are based on the Site visit and review of the database report, aerial photographs, and other documents.

Specific to the ESA, lack of evidence of the presence of recognized environmental conditions following completion of the tasks of a reasonable and mutually agreed-upon scope of work does not guarantee the absence of such conditions; rather, it indicates only that none were found as a result of the services provided. Although the limited nature of Harding ESE's scope of work precludes us from providing a warranty or guarantee regarding the presence or absence of recognized environmental conditions that could potentially affect the Site, Harding ESE has provided its best professional judgment of possible environmental issues and performed the practices and procedures generally accepted in the consulting engineering field. No other warranty is given or implied by this report. Harding ESE has made no attempt to address future financial impacts to the Site (e.g., reduced property value, difficulty selling the property) from the potential presence of any environmental contamination onsite.

This ESA was conducted in accordance with practices and procedures generally accepted in the environmental consulting field. A more extensive assessment that includes surface and/or subsurface investigation and chemical analysis of soil and/or groundwater samples from the Site would provide more definitive information concerning site-specific conditions.

2.3 Report Organization

The following sections are included in this report, together with supporting plates and appendices:

- Section 1.0 Executive Summary
- Section 2.0 Introduction
- Section 3.0 Site Description
- Section 4.0 Site Historical Review
- Section 5.0 Site Reconnaissance
- Section 6.0 Regulatory Agency Database Review
- Section 7.0 Conclusions
- Section 8.0 References.

3.0 SITE DESCRIPTION

This section presents information regarding the physiognomy of the Site. Site photos are presented in Appendix A.

3.1 Location

The Site is in western San Joaquin County about 1½ miles west-southwest of Tracy city limits. It comprises approximately 40 acres in the northwest quadrant of San Joaquin Assessor's Parcel 209-24-11, and lies in the northwest quarter of the southwest quarter of Section 36, Township 2 South, Range 4 East, Mount Diablo Base and Meridian (NW ¼ of SW ¼, Section 36, T.2 S., R. 4. E; Plate 1). It is bordered on the north by Southern Pacific Railroad tracks and on the southwest by the Delta-Mendota Canal. The Site is accessed by a field access road off of Lammers Road, a north-south road about ½ mile east of the Site.

3.2 Physical Setting

Topography. The U.S. Geological survey (USGS) 7.5-minute Tracy quadrangle map identifies topography in the Site vicinity (*USGS*, *1981*). As seen on the map, a portion of which is reproduced as Plate 1, the Site is at an elevation of approximately 160 feet above mean sea level (MSL). The area is relatively flat with little topographic relief. Regionally, land slopes downward to the northeast.

Surface Water/Hydrology. The nearest surface water body is the Delta-Mendota Canal southwest of and adjacent to the Site. In addition, there are numerous unnamed irrigation canals in the area.

Wetlands. The Site does not appear to have the characteristics of a wetland. However, a more thorough evaluation by a qualified individual using the methods prescribed in the 1987 *US Army Corps of Engineers Wetland Delineation Manual* would be required to determine the presence or absence of wetlands at the Site.

Regional Geology. The Site is in the northern portion of the San Joaquin Valley, the southern half of California's Central Valley. The Central Valley is a large elongate northwest-trending asymmetric structural trough that has been filled with a sequence of sediments, in some areas up to 60,000 feet thick (*DWR*, 1958). The geologic map of the area shows that near-surface deposits in the area near the Site are composed of flood basin deposits.

Soils. The soils at the Site (upper 5 feet) are listed as "Capay", clay with very slow infiltration rates, and moderately well drained (EDR, 2001). A 1943 USDA soil survey of the Tracy area identified soil in the areas as older alluvial "Ambrose clay" soil (USDA. 1943). The soils at the Site were being characterized by a geotechnical firm on the day of Harding ESE's Site visit. Site-specific soil information will likely be included in the geotechnical report.

Radon. The EPA was directed to list and identify areas of the US with the potential for elevated indoor radon levels under Sections 307 and 309 of the Indoor Radon Abatement Act of 1988. The EPA has established a "action level" for radon gas designated as 4 picoCuries per liter (pCi/L) of air. The environmental database report on page A-8 presents radon data for San Joaquin County, where the Site is located. According to the information presented in the EDR report, the average concentration for first floor living areas is 2.200 pCi/L. San Joaquin County is categorized as "Zone 3", a designation for areas with the lowest potential for harmful radon accumulations.

Seismology. There are no major faults in the Site vicinity. The nearest fault zones are the Tesla and San Andreas Fault zones, approximately 15 and 65 miles to the west, respectively. A moderate to major earthquake on either of these faults would generate moderate ground shaking in the Site vicinity (California Division of Mines and Geology, 1999).

Groundwater. The Site is in the Tracy subbasin of the San Joaquin Groundwater Basin. Based on a 1999 basin groundwater elevation map produced by the California Department of Water Resources (*DWR*, 2001) groundwater in the region appears to flow in a north-northeast direction. However, it should be noted that the gradient can vary locally. The GeoCheck® portion of the EDR report in Appendix C did not identify any wells within a mile radius of the Site, but indicates that depth to groundwater may be three to six feet in areas that possess the types of soil present at the Site. However, based on DWR groundwater level data for the basin, the depth to shallow groundwater in the Site vicinity may range from approximately 10 to 25 feet. Historical data are available on-line from the DWR Division of Planning and Local Assistance for Well 02S04E36P01M, located ½ to ½ mile southeast of the Site (in the SE ¼ of SW ¼ Section 36, T.2 S., R. 4. E) indicates a depth to water of over time of between 156 and 280 feet (http://well.water.ca.gov) at this well

3.3 Site and Vicinity General Characteristics, History, and Planned Uses

The Site covers approximately 40 acres. The Site is bordered on the north by Southern Pacific Railroad tracks, on the southwest by the Delta-Mendota Canal, and to the south and east by agricultural properties. The property north across the railroad tracks is used by Owens Brockway as a manufacturing facility.

It is Harding ESE's understanding that the planned development for the Site is a peaker power plant facility.

3.4 Site Improvements

Electrical transmission lines (230kV and 115 kV lines) trend southwest to northeast across the southeastern portion of the Site. A Pacific Gas & Electric Company (PG&E) natural gas pipeline crosses the central portion of the Site from northwest to southeast. No other improvements were noted at the Site.

3.5 Current Use of the Property

The Site is not currently in agricultural production.

4.0 SITE HISTORICAL REVIEW

This section presents information on the Site based on review of historical documents reviewed by Harding ESE.

4.1 Past Uses of the Site

The Site has previously been used for agricultural purposes, based on information provided during an interview with the current Site owner (Russell Kagehiro: Section 5.0) and review of historical information presented in Section 4.3. Historically, crops grown in the Site vicinity on soils occupying the older alluvial fans (such as are present onsite) included grain, flax, and alfalfa (*USDA*, 1943).

According to Mr. Kagehiro, who has owned the Site for approximately 15 years, the site has grown cauliflower, grain, and sugar beets. It is likely the gas pipeline onsite was constructed in the 1930s, based on information in Harding ESE's files for another property along the pipeline route (*HLA*, 1999). The electrical transmission line corridor crossing the Site dates to at least 1938, based on *USDA* 1943.

4.2 Previous Environmental Studies Involving the Site

Harding ESE is not aware of any previous environmental studies related to the Site.

4.3 Historical Topographic Maps and Aerial Photographs

Harding ESE reviewed historical USGS topographic maps and aerial photographs obtained through EDR (examples are presented in Appendix B). According to ASTM Standard E 1527-00, an undeveloped property needs to have historical information that dates back to 1940. The historical information received from EDR does not meet this criterion. At the time of this report, Harding ESE was conducting a search for historical aerial photographs dating back to or before 1940. An addendum with the information will be provided.

USDA Soil Conservation Service Map, 1938. The U.S. Department of Agriculture Soil Conservation Service published a Soil Survey for the Tracy area in 1943 using 1938 survey data overlain on a USGS base map (*USDA, 1943*). This map shows that the Southern Pacific rail line was present in 1938, as was the power transmission line corridor that extends southwest to northeast across the southeast portion of the Site. The Delta-Mendota Canal was not present. An oil or gas tank farm is visible in the southeast corner the southeast quarter of Section 36, about ½ mile east of the Site.

Topographic Map. 1954. Tracy 7.5-minute quadrangle. No buildings or structures are shown on the Site. The symbol for an underground gas or oil pipeline is shown transecting the Site from the northwest to the southeast. Power lines are shown across the Site in a southwest/northeasterly direction. The Southern Pacific Railroad tracks are shown north of and adjacent to the Site. The Delta-Mendota Canal is shown southwest of and adjacent to the Site and continuing down in a southeasterly direction. According to the USGS (1959), the Delta-Mendota Canal was completed in 1951.

Schulte Road is present about ½ mile north of the Site and Lammers Road about ½ mile east of the Site Three oil tanks and four barns/warehouse structures are shown approximately ½ to ¾ mile southeast of the Site. No other structures are shown near the Site.

Aerial Photograph. 1957. Scale: 1" = 555'. No buildings are shown on the Site. What appear to be the power lines are shown across the Site running southwest/northeast. The Southern Pacific Railroad tracks

are shown north of and adjacent to the Site. The Delta-Mendota Canal is shown southwest of and adjacent to the Site and continuing down in a southeast direction.

All surrounding properties and the surrounding area appear to be used for agricultural purposes.

Topographic Map. 1968. Tracy 7.5-minute quadrangle. No change onsite is apparent. Adjacent land appears unchanged as well with the exception of the large commercial structure located immediately north of the Southern Pacific Railroad tracks.

Overall, the region appears the same.

Topographic Map. 1981. Tracy 7.5-minute quadrangle. No change onsite is apparent. Adjacent land appears unchanged as well, with the exception of additions to the large commercial structure located to the north.

Overall, the region appears the same.

Aerial Photograph. 1982. Scale: 1"=690'. The Site appears the same as it was in the 1957 photograph. A large structure is apparent north of the railroad tracks. No other changes are apparent to the adjacent properties or the surrounding area.

Aerial Photograph. 1994. Scale: 1" =666'. The Site appears the same as it was in the 1982 photograph, with the exception of what appears to be a dirt road running along the underground pipeline route. According to an interview with a PG&E spokesperson, reported in *HLA 1999*, PG&E installed a second natural gas pipeline within its pipeline corridor in the early 1990s. Both are steel pipelines with cathodic protection. The older pipeline, installed in 1929, is 26 inches in diameter, but has been upgraded from time to time. The newer pipeline is 42 inches in diameter. Both are buried 4 to 5 feet deep in accordance with Department of Transportation regulations. It is likely that the "road" visible in the 1994 photo is indicative of recent pipeline construction. No other changes are apparent to the adjacent properties or the surrounding area.

5.0 SITE RECONNAISSANCE

Ms. Susan Lewos of Harding ESE conducted a Site visit on June 11, 2001. Following the Site visit, she interviewed Mr. Russell Kagehiro, Site owner. Mr. Kagehiro informed Harding ESE that, to his knowledge, no spills or accidents have occurred at the Site.

Mr. Kagehiro informed Harding ESE that the Site has been used for agricultural purposes and no structures, USTs, or development other than the underground pipeline and electrical towers have existed on the Site. Site photos are in Appendix A.

5.1 Site Visit Observations

At the time of the Site visit, the Site was fallow and appeared to have been used previously for agricultural purposes. Electrical power lines cross the Site in southwest/northeast direction. Telephone poles were also noted onsite. No agricultural equipment, pesticides, herbicides or fertilizers were stored on the Site. No other improvements were observed on the Site.

5.2 General Observations

During the Site visit, Harding ESE looked for but saw no evidence of the following onsite other than as described above in this section:

- Remnants of former buildings
- Underground storage tanks
- Chemical or petroleum smells or foul odors
- Landfilling or burial activities
- Surface impoundments or holding ponds
- Current air emissions or wastewater discharges
- Industrial or manufacturing activities
- Groundwater monitoring wells or remedial activities
- Stained or discolored soils
- Leachate or seeps
- Distressed, discolored, or stained vegetation
- Chemical spills or releases
- Groundwater or surface water contamination
- Oil well or gas exploration, production, or refinery activities

• Discharges, leachate, migration or runoff of potential contaminants from offsite sources.

5.3 Adjacent Properties

The property to the north of the Site across the railroad tracks is the Owens Brockway glass production facility. The Delta-Mendota Canal is located along the southwest edge of the Site with a dirt path running between the canal and the Site. Southern Pacific Railroad tracks are north of and adjacent to the Site. Agricultural properties are located south and east of the Site.

6.0 REGULATORY AGENCY DATABASE REPORT REVIEW

The ASTM Standard E 1527-00 identifies standard federal and state environmental "record sources" (e.g., the federal Superfund list, a list of registered underground storage tanks [USTs]) that should be reviewed to identify "recognized environmental conditions." The standard defines approximate minimum search distances from the Site being assessed for the types of properties listed in these records. The search radii are identified in Sections 6.2 and 6.3 for each list described. The principal criterion is whether offsite properties could impact environmental conditions on the Site, although the appearance of a property in an environmental database does not necessarily mean that it has hazardous materials/wastes problems.

Harding ESE obtained and evaluated an environmental regulatory agency database report from Environmental Data Resources, Inc. (EDR). The EDR report identifies properties listed in ASTM-recommended databases within recommended search distances from the Site and provides information on listed properties. The EDR report is included as Appendix C.

6.1 The Site

The Site was not identified in the EDR report, indicating the Site has not been listed in regulatory environmental agency databases.

6.2 Federal Environmental Record Sources

ASTM E 1527-00 guidance requires review of the following federal databases:

• Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS, 1/2 mile), March 16, 2001 - CERCLIS contains data on potentially hazardous waste sites that have been reported to the U.S. Environmental Protection Agency (EPA) by states, municipalities, private companies, and private persons pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The CERCLIS List includes sites that are either proposed for the National Priorities List (NPL) or in the screening and assessment phase for possible inclusion on the NPL. Source: EPA/National Technical Information Service (NTIS).

No CERCLIS properties are listed within ½ mile of the Site.

• CERCLIS-NFRAP (1/4 mile), March 16, 2001 – No-further-remedial-action-planned (NFRAP) sites are those removed from CERCLIS because, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration. The purpose of the NFRAP is to remove unintended barriers to the redevelopment of the properties as part of EPA's Brownfields program to promote economic development of unproductive urban sites. Source: EPA.

No properties within 1/4 mile of the Site are listed in this database.

• National Priorities List (1 mile), January 23, 2001 - The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. An NPL (i.e., Superfund) site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the U.S. Department of Health and Human Services and the EPA. Source: EPA.

There are no federal Superfund sites within 1 mile of the Site.

• Emergency Response Notification System (ERNS, target property), August 8, 2000 - ERNS is a national database that records and stores information on reported releases of oil and hazardous substances. The database contains information on spill reports made to federal authorities including the EPA, U.S. Coast Guard, National Response Center, and Department of Transportation. Source: EPA/NTIS.

The Site is not identified on this list.

• Resource Conservation and Recovery Information System (RCRIS), June 21, 2000 - RCRIS includes selected information on facilities that generate, transport, store, treat and/or dispose of hazardous waste, as defined by the Resource Conservation and Recovery Act (RCRA). Source: EPA/NTIS. RCRIS includes the following databases:

RCRIS Treatment, Storage, and Disposal (TSD) Facilities (1/2 mile) - Facilities that treat, store, and/or dispose of hazardous wastes.

No treatment, storage, and/or disposal facilities are listed within 1/2 mile of the Site.

RCRIS Generators Lists (1/4 mile) - RCRIS large quantity generators (LQG) are those facilities that generate at least 1,000 kilograms per month of non-acutely hazardous waste or meet other applicable RCRA requirements. RCRIS small quantity generators (SQG) generate less than 1,000 kg/month of non-acutely hazardous waste or meet other applicable RCRA requirements.

No RCRIS properties are listed within ¼ mile of the Site.

• Corrective Action Report (CORRACTS, 1 mile), April 20, 2000 - CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. Source: EPA.

No properties within 1 mile of the Site are listed in the CORRACTS database.

6.3 California Environmental Record Sources

ASTM E 1527-00 requires review of the following state databases:

• Bond Expenditure Plan (BEP, 1 mile), January 1, 1989 - California Department of Health Services (DHS) developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. The BEP is not updated. Source: DHS

No properties within 1 mile of the Site are identified on the BEP list

Cal-Sites Annual Workplan (AWP, 1 mile), November 8, 2000 - This database (formerly BEP), provided by Cal/EPA's Department of Toxic Substances Control (DTSC), identifies known hazardous substance sites that have been targeted for cleanup. Source: California Environmental Protection Agency (Cal/EPA).

No properties within 1 mile of the Site are listed on the AWP list.

• Cal-Sites (formerly known as ASPIS) (1 mile), October 1, 2000 - The Cal-Sites database lists potential or confirmed hazardous substance release properties. In 1996, Cal/EPA reevaluated and significantly reduced the number of sites in this database. Source: Cal/EPA DTSC.

No properties within 1 mile of the Site are identified on the Cal-Sites list.

Leaking Underground Storage Tank Information System (LUST, 1/2 mile), March 31, 2001 The LUST database lists reported leaking underground storage tank incidents. Source: State Water
Resources Control Board (SWRCB).

No properties within 1 mile of the Site are listed on the LUST list.

• Proposition 65 Notification Records (NOTIFY 65, 1 mile), October 21, 1993 - The NOTIFY 65 database contains facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. No update of this list is planned. Source: SWRCB.

No properties within 1 mile of the Site are on the NOTIFY 65 list.

• SWF/LF, Solid Waste Information System (SWIS, 1/2 mile), February 21, 2001 - This database is an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites. Source: California Integrated Waste Management Board.

No properties within ½ mile of the Site are on the SWIS list.

• Cortese List (1 mile), April 1, 1998 - This database contains summary information pertaining to contaminated sites in California. The sites on the list are designated by the State Water Resources Control Board (from the LUST list, discussed above), the California Integrated Waste Management Board (the SWF/LF list discussed above), and the DTSC (the Cal-Sites list, above). Source: Cal/EPA Office of Emergency Information.

No properties within 1 mile of the Site are listed on the Cortese Database.

California Hazardous Material Incident Report System (CHMIRS, 1 mile), December 31, 1994
 CHMIRS contains information on reported hazardous material incidents (accidental releases or spills). No update of this list is planned. Source: California Office of Emergency Services (OES).

No properties were listed in the CHMIRS database within 1 mile of the Site.

• Toxic Pits Cleanup Act Sites (Toxic Pits, 1 mile), July 1, 1995 - This list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. No update of this list is planned. Source: SWRCB.

No properties within 1 mile of the Site are listed in this database.

Hazardous Substance Storage Container Database (UST, 1/4 mile), October 15, 1990, and
Facility Inventory Database (FID, 1/4 mile), October 31, 1994- These databases are historical
listings of facilities that have (or had) underground storage tanks. Local and county sources have
current UST information. No updates of these lists are planned. Sources: SWRCB for UST,
Cal/EPA for FID

No UST or FID properties are listed as being within ¼ mile of the Site.

• Waste Management Unit Database System (WMUDS/SWAT, 1/2 mile), April 1, 2000 - This system is used by the SWRCB to track and inventory waste management units. WMUDS comprises the following databases: facility information, scheduled inspections information, waste management unit information, Solid Waste Assessment Test (SWAT) program information, SWAT report summary information, SWAT report summary data, Chapter 15 information and monitoring parameters, TPCA program information, RCRA program information, closure information, and interested parties information. Source: SWRCB.

No properties within the ASTM search distance are listed in this database.

6.4 State or Local ASTM Supplemental

• Cal/EPA Hazardous Waste Information System (HAZNET, 1/4 mile), December 31, 1999 - HAZNET provides hazardous waste manifest data extracted from copies of hazardous waste manifests. Inclusion in HAZNET implies that a facility properly disposed of hazardous waste.

There are no HAZNET listings in the EDR report within ½ mile of the site. Facilities on the list include, in general, properties that have properly disposed of hazardous waste. The presence of these properties on the list does not imply that offsite disposal of wastes from these properties could have affected the Site.

6.5 Non-ASTM Databases

The following non-ASTM databases were checked by EDR. These databases are described on pages GR1 – GR15 of the EDR report.

- EPA Regional Offices Superfund Consent Decrees (1 mile)
- NTIS Records of Decision (1 mile)
- Delisted NPL Sites (1 mile)
- EPA Facility Index System/Facility Identification Initiative Program Summary Report (FINDS; target property)
- U.S. Department of Transportation Hazardous Materials Information Reporting System (target property)
- U.S. Nuclear Regulatory Commission Material Licensing Tracking System (target property)
- Department of Labor Mine Safety and Health Administration Mines Master Index File (1/4 mile)
- EPA Federal Superfund Liens (target property)

- EPA PCB Activity Database System (target property)
- EPA RCRA Administrative Action Tracking System (target property)
- EPA/NTIS Toxic Chemical Release Inventory System (target property)
- EPA Toxic Substances Control Act (target property)
- SWRCB Aboveground Petroleum Storage Tank Facilities (target property)
- SWRCB Waste Discharge System (target property)
- San Jose HAZMAT facilities
- Former Manufactures Gas (Coal Gas) Sites

These lists did not include any properties within the search distances given.

6.6 Orphan Sites

The EDR report lists "orphan" sites, that is, properties for which address information is insufficient to map, although addresses are frequently available. Twenty "orphans" are listed. These properties, based on their probable location or regulatory listing, are not expected to affect subsurface conditions at the Site.

7.0 CONCLUSIONS AND RECOMMENDATIONS

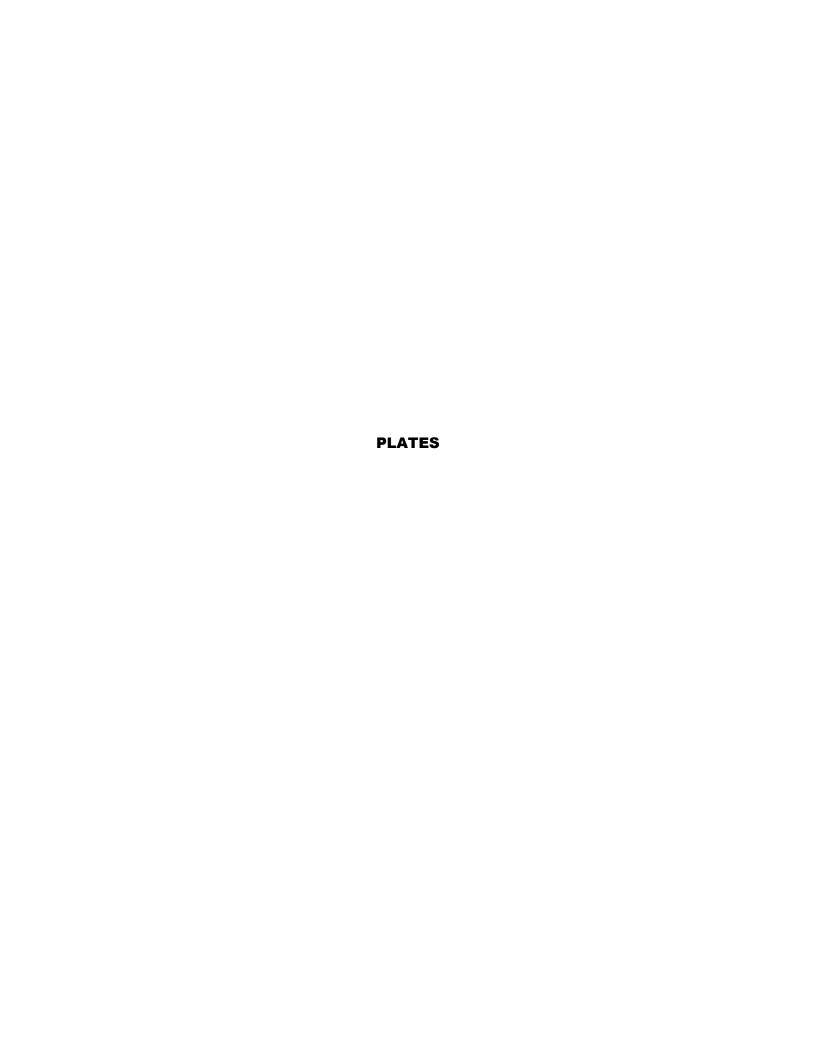

Harding ESE has performed this Phase I ESA for the GWF Power Systems using the ASTM Standard Practice E 1527-00. On the basis of our Site visit and document reviews, we conclude the following:

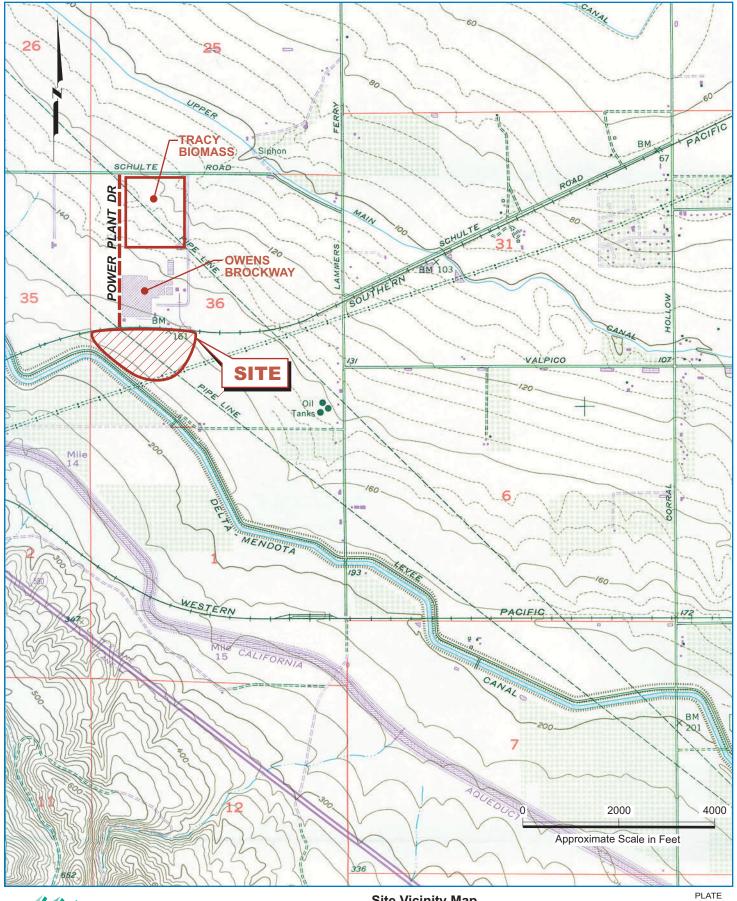

- The Site comprises an approximately 40-acre parcel that was used previously for agricultural purposes. A natural gas pipeline corridor, an electrical transmission line, and telephone lines cross the Site.
- Pesticides and herbicides have most likely been utilized at the Site. Harding ESE collected five soil samples at the Site to screen for the presence of pesticides and herbicides above regulatory levels. The results of the soil sampling will be presented under separate cover.
- No recorded spills have occurred at the Owens Brockway facility located north of the Site.
- Review of the environmental regulatory agency database report and other documents indicates that no offsite properties are believed to have the potential to affect environmental conditions at the Site.

This assessment has revealed no evidence of recognized environmental conditions as defined by ASTM.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases. EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement

of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center

Date of Government Version: 01/23/01 Date Made Active at EDR: 02/16/01

Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 02/05/01

Elapsed ASTM days: 11

Date of Last EDR Contact: 05/07/01

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/16/01 Date Made Active at EDR: 04/30/01 Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/26/01 Elapsed ASTM days: 35

Date of Last EDR Contact: 03/26/01

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found. contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 03/16/01 Date Made Active at EDR: 04/30/01 Database Release Frequency: Quarterly

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report

Source: EPA Telephone: N/A

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/07/00 Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/09/01
Date of Next Scheduled EDR Contact: 07/09/01

HMIRS: Hazardous Materials Information Reporting System

Source: U.S. Department of Transportation

Telephone: 202-366-4526

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 05/31/00 Database Release Frequency: Annually Date of Last EDR Contact: 04/24/01
Date of Next Scheduled EDR Contact: 07/23/01

MLTS: Material Licensing Tracking System Source: Nuclear Regulatory Commission

Telephone: 301-415-7169

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 01/30/01 Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/09/01
Date of Next Scheduled EDR Contact: 07/09/01

MINES: Mines Master Index File

Telephone: 303-231-5959

Date of Government Version: 08/01/98
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 04/02/01
Date of Next Scheduled EDR Contact: 07/02/01

NPL LIENS: Federal Superfund Liens

Source: EPA

Telephone: 205-564-4267

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91

Database Release Frequency: No Update Planned

Date of Last EDR Contact: 05/23/01 Date of Next Scheduled EDR Contact: 08/20/01

PADS: PCB Activity Database System

Source: EPA

Telephone: 202-260-3936

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 12/11/00 Database Release Frequency: Annually

Date of Last EDR Contact: 05/18/01
Date of Next Scheduled EDR Contact: 08/13/01

RAATS: RCRA Administrative Action Tracking System

Source: EPA

Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95

Database Release Frequency: No Update Planned

Date of Last EDR Contact: 03/13/01

Date of Next Scheduled EDR Contact: 06/11/01

TRIS: Toxic Chemical Release Inventory System

Source: EPA

Telephone: 202-260-1531

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and

land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/97

Database Release Frequency: Annually

Date of Last EDR Contact: 03/26/01

Date of Next Scheduled EDR Contact: 06/25/01

TSCA: Toxic Substances Control Act

Source: EPA

Telephone: 202-260-1444

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant

site.

Date of Government Version: 12/31/98

Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 03/30/01

Date of Next Scheduled EDR Contact: 06/12/01

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Source: EPA/Office of Prevention, Pesticides and Toxic Substances

Telephone: 202-564-2501

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 08/30/00

Database Release Frequency: Quarterly

NOTIFY 65: Proposition 65 Records

Source: State Water Resources Control Board

Telephone: 916-657-0696

Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact

drinking water and thereby expose the public to a potential health risk.

Date of Government Version: 10/21/93

Date Made Active at EDR: 11/19/93

Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 11/01/93

Elapsed ASTM days: 18

Date of Last EDR Contact: 04/26/01

TOXIC PITS: Toxic Pits Cleanup Act Sites

Source: State Water Resources Control Board

Telephone: 916-227-4364

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup

has not yet been completed.

Date of Government Version: 07/01/95

Date Made Active at EDR: 09/26/95

Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 08/30/95

Elapsed ASTM days: 27

Date of Last EDR Contact: 05/07/01

SWF/LF (SWIS): Solid Waste Information System

Source: Integrated Waste Management Board

Telephone: 916-341-6320

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal

facilities or landfills. These may be active or i nactive facilities or open dumps that failed to meet RCRA Section

4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 02/21/01 Date Made Active at EDR: 04/13/01

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/19/01

Elapsed ASTM days: 25

Date of Last EDR Contact: 03/19/01

WMUDS/SWAT: Waste Management Unit Database Source: State Water Resources Control Board

Telephone: 916-227-4448

Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/00 Date Made Active at EDR: 05/10/00 Database Release Frequency: Quarterly Date of Data Arrival at EDR: 04/10/00 Elapsed ASTM days: 30 Date of Last EDR Contact: 03/16/01

LUST: Leaking Underground Storage Tank Information System

Source: State Water Resources Control Board

Telephone: 916-445-6532

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 03/31/01 Date Made Active at EDR: 05/07/01 Database Release Frequency: Quarterly Date of Data Arrival at EDR: 04/12/01 Elapsed ASTM days: 25 Date of Last EDR Contact: 04/12/01

CA UST:

UST: Hazardous Substance Storage Container Database

Source: State Water Resources Control Board

Telephone: 916-227-4408

The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

Date of Government Version: 10/15/90 Date Made Active at EDR: 02/12/91 Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 01/25/91 Elapsed ASTM days: 18 Date of Last EDR Contact: 04/05/01

CA BOND EXP. PLAN: Bond Expenditure Plan Source: Department of Health Services

Telephone: 916-255-2118

Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/89 Date Made Active at EDR: 08/02/94

Database Release Frequency: No Update Planned

HAZNET: Hazardous Waste Information System

Source: California Environmental Protection Agency

Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

HISTORICAL AND OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property:

Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property:

General NNE

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

LOCATION

GENERAL DIRECTION

MAP ID

GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOLOGIC AGE IDENTIFICATION

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:

CAPAY

Soil Surface Texture:

clay

Hydrologic Group:

Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class:

Moderately well drained. Soils have a layer of low hydraulic

conductivity, wet state high in the profile. Depth to water table is 3

to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min:

> 60 inches

Depth to Bedrock Max:

> 60 inches

Soil Layer Information										
Layer	Boundary		Soil Texture Class	Classi	fication					
	Upper Lower			AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)			
1	0 inches	32 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 5.60			
2	32 inches	50 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60			
3	50 inches	62 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60			

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand

gravelly - loam gravelly - sandy loam

Surficial Soil Types:

clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand

gravelly - loam gravelly - sandy loam

Shallow Soil Types:

No Other Soil Types

Deeper Soil Types:

clay loam

gravelly - clay loam gravelly - loam stratified indurated

extremely gravelly - sand

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement

of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/24/02 Date Made Active at EDR: 12/09/02

Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 11/04/02 Elapsed ASTM days: 35 Date of Last EDR Contact: 11/04/02

Elapsed ASTM days: 35

Date of Last EDR Contact: 11/04/02

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/13/02 Date Made Active at EDR: 01/15/03

Database Release Frequency: Quarterly

Date of Last EDR Contact: 12/26/02

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System

Source: EPA/NTIS Telephone: 800-424-9346

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99

Database Release Frequency: Biennially

Date of Last EDR Contact: 12/17/02

Date of Next Scheduled EDR Contact: 03/17/03

CONSENT: Superfund (CERCLA) Consent Decrees

Source: EPA Regional Offices

Telephone: Varies

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A Database Release Frequency: Varies Date of Last EDR Contact: N/A

Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision

Source: EPA

Telephone: 703-416-0223

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 12/21/01 Database Release Frequency: Annually Date of Last EDR Contact: 01/07/03

Date of Next Scheduled EDR Contact: 04/07/03

DELISTED NPL: National Priority List Deletions

Source: EPA Telephone: N/A

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the

NPL where no further response is appropriate.

Date of Government Version: 10/18/02 Database Release Frequency: Quarterly Date of Last EDR Contact: 11/04/02

Date of Next Scheduled EDR Contact: 02/03/03

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report

Source: EPA Telephone: N/A

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 10/10/02 Database Release Frequency: Quarterly Date of Last EDR Contact: 01/06/03 Date of Next Scheduled EDR Contact: 04/07/03

HMIRS: Hazardous Materials Information Reporting System

Source: U.S. Department of Transportation

Telephone: 202-366-4555

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 07/31/02 Database Release Frequency: Annually Date of Last EDR Contact: 10/21/02 Date of Next Scheduled EDR Contact: 01/20/03

MLTS: Material Licensing Tracking System Source: Nuclear Regulatory Commission

Telephone: 301-415-7169

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 10/21/02 Database Release Frequency: Quarterly

Date of Last EDR Contact: 01/06/03 Date of Next Scheduled EDR Contact: 04/07/03

MINES: Mines Master Index File

Source: Department of Labor, Mine Safety and Health Administration

Date of Government Version: 09/10/02 Database Release Frequency: Semi-Annually Date of Last EDR Contact: 01/03/03

Date of Next Scheduled EDR Contact: 03/31/03

NPL LIENS: Federal Superfund Liens

Source: EPA

Telephone: 205-564-4267

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91

Database Release Frequency: No Update Planned

Date of Last EDR Contact: 11/25/02

Date of Next Scheduled EDR Contact: 02/24/03

PADS: PCB Activity Database System

Source: EPA

Telephone: 202-564-3887

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers

of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 09/20/02

Database Release Frequency: Annually

Date of Last EDR Contact: 11/13/02

Date of Next Scheduled EDR Contact: 02/10/03

RAATS: RCRA Administrative Action Tracking System

Source: EPA

Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95

Database Release Frequency: No Update Planned

Date of Last EDR Contact: 12/10/02

Date of Next Scheduled EDR Contact: 03/10/03

TRIS: Toxic Chemical Release Inventory System

Source: EPA

Telephone: 202-260-1531

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and

land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/00

Database Release Frequency: Annually

Date of Last EDR Contact: 12/26/02

Date of Next Scheduled EDR Contact: 03/24/03

TSCA: Toxic Substances Control Act

Source: EPA

Telephone: 202-260-5521

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant

site.

Date of Government Version: 12/31/98

Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 12/10/02

Date of Next Scheduled EDR Contact: 03/10/03

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Source: EPA

Telephone: 202-564-2501

Date of Government Version: 10/24/02

Database Release Frequency: Quarterly

Date of Last EDR Contact: 12/26/02

Date of Next Scheduled EDR Contact: 03/24/03

SSTS: Section 7 Tracking Systems

Source: EPA

Telephone: 202-564-5008

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/00 Database Release Frequency: Annually Date of Last EDR Contact: 01/21/03

Date of Next Scheduled EDR Contact: 04/21/03

FTTS: FIFRA/TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Source: EPA/Office of Prevention, Pesticides and Toxic Substances

Telephone: 202-564-2501

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA,

TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the

Agency on a quarterly basis.

Date of Government Version: 10/24/02

Database Release Frequency: Quarterly

HAZNET: Hazardous Waste Information System Source: California Environmental Protection Agency

Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY HISTORICAL DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

STATE OF CALIFORNIA BROWNFIELDS DATABASES RECORDS

VCP: Voluntary Cleanup Program Properties Source: Department of Toxic Substances Control

Telephone: 916-323-3400

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Date of Government Version: 12/30/02 Database Release Frequency: Quarterly Date of Last EDR Contact: 01/06/03 Date of Next Scheduled EDR Contact: 04/07/03

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property:

2437121-F4 TRACY, CA

Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property:

General NNE

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

LOCATION FROM TP

GENERAL DIRECTION

Not Reported

GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:

CAPAY

Soil Surface Texture:

clay

Hydrologic Group:

Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class:

Moderately well drained. Soils have a layer of low hydraulic

conductivity, wet state high in the profile. Depth to water table is 3

to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min:

> 60 inches

Depth to Bedrock Max:

> 60 inches

Soil Layer Information							
Layer	Boundary			Classification			
	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	32 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 5.60
2	32 inches	50 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60
3	50 inches	62 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand

gravelly - loam gravelly - sandy loam

Surficial Soil Types:

clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand

gravelly - loam gravelly - sandy loam

Shallow Soil Types:

No Other Soil Types

Deeper Soil Types:

clay loam gravelly - clay loam

gravelly - loam stratified indurated

extremely gravelly - sand

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-4099

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-4099

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2, 3, 5 and 6

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE ASTM STANDARD

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

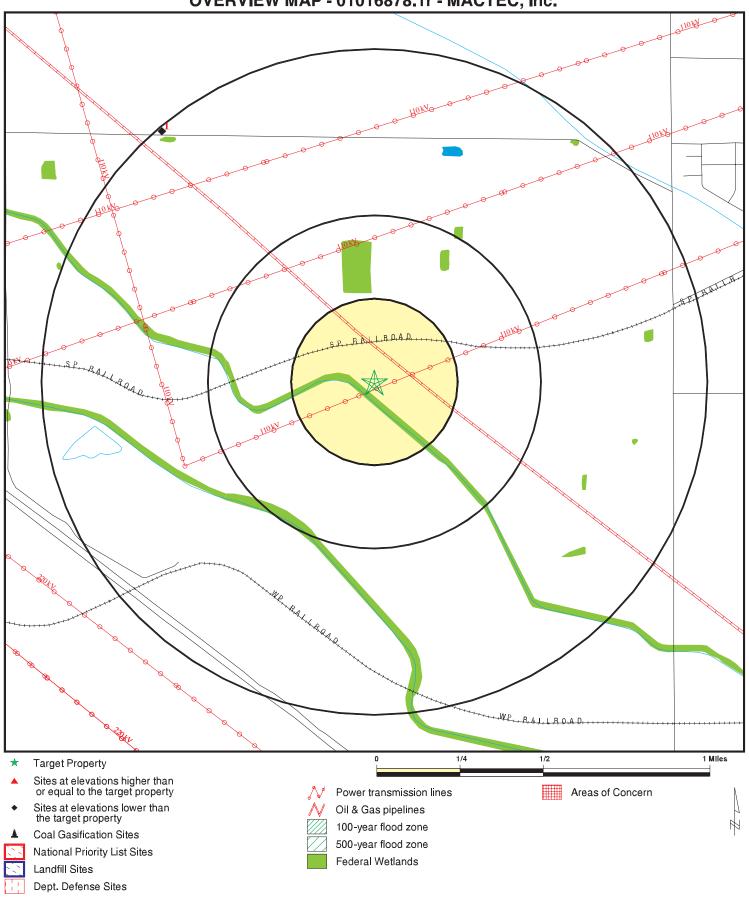

A review of the Cortese list, as provided by EDR, has revealed that there is 1 Cortese site within approximately 1 mile of the target property.

Design Flow: 0 Million Gal/Day Baseline Flow: 0 Million Gal/Day
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any

servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and

repairing, oil production, storage and disposal operations, water pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste

Discharge Requirements.

Agency Type: Private

Waste Type: Domestic Sewage - Designated/Influent or Solid Wastes that pose a significant threat to

water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in

this category.

Cooling Water: Noncontact - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are

included in this category.

Threat to Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on

receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment

would include nuisance from a waste treatment facility.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment

system (except for septic systems with subsurface disposal), or any Class II or III

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement

of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

HAZNET: Hazardous Waste Information System Source: California Environmental Protection Agency

Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Next Scheduled EDR Contact: 09/01/03

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its

fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

TRACY PEAKER PLANT 14950 WEST SCHULTE ROAD TRACY, CA 95377

TARGET PROPERTY COORDINATES

Latitude (North): 37.710999 - 37° 42' 39.6" Longitude (West): 121.492897 - 121° 29' 34.4"

Universal Tranverse Mercator: Zone 10 UTM X (Meters): 632844.1 UTM Y (Meters): 4174614.5

Elevation: 183 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

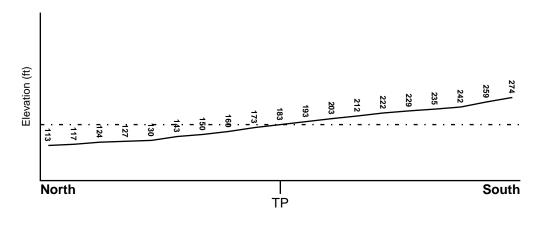

TARGET PROPERTY TOPOGRAPHY

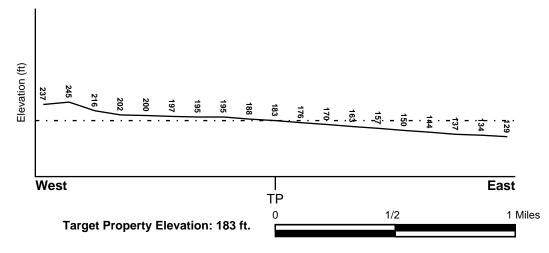

USGS Topographic Map: 2437121-F4 TRACY, CA

General Topographic Gradient: General NNE

Source: USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Cenozoic Category: Stratifed Sequence

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: CAPAY

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic

conductivity, wet state high in the profile. Depth to water table is 3

to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information							
Boundary			Classification				
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	32 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 5.60
2	32 inches	50 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60
3	50 inches	62 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand gravelly - loam

gravelly - loam gravelly - sandy loam

Surficial Soil Types: clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: clay loam

gravelly - clay loam gravelly - loam stratified

indurated

extremely gravelly - sand

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2, 3, 5 and 6

Source: Department of Conservation

Telephone: 916-323-1779

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

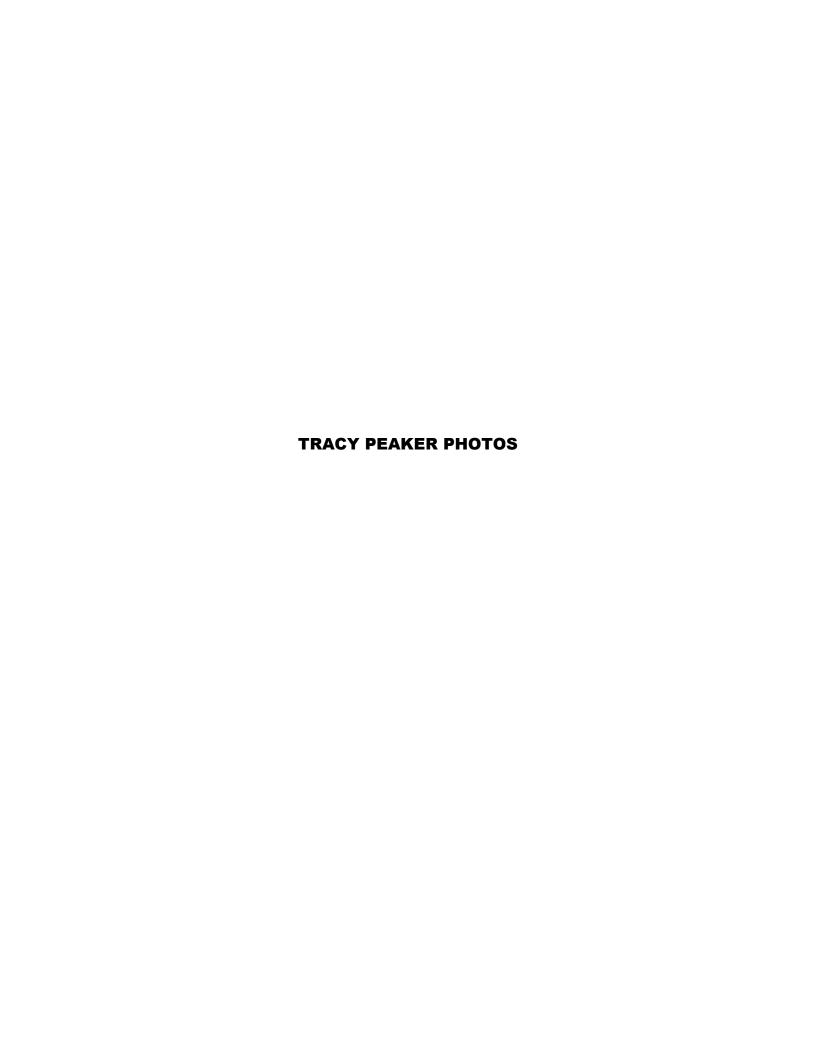

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE ASTM STANDARD

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

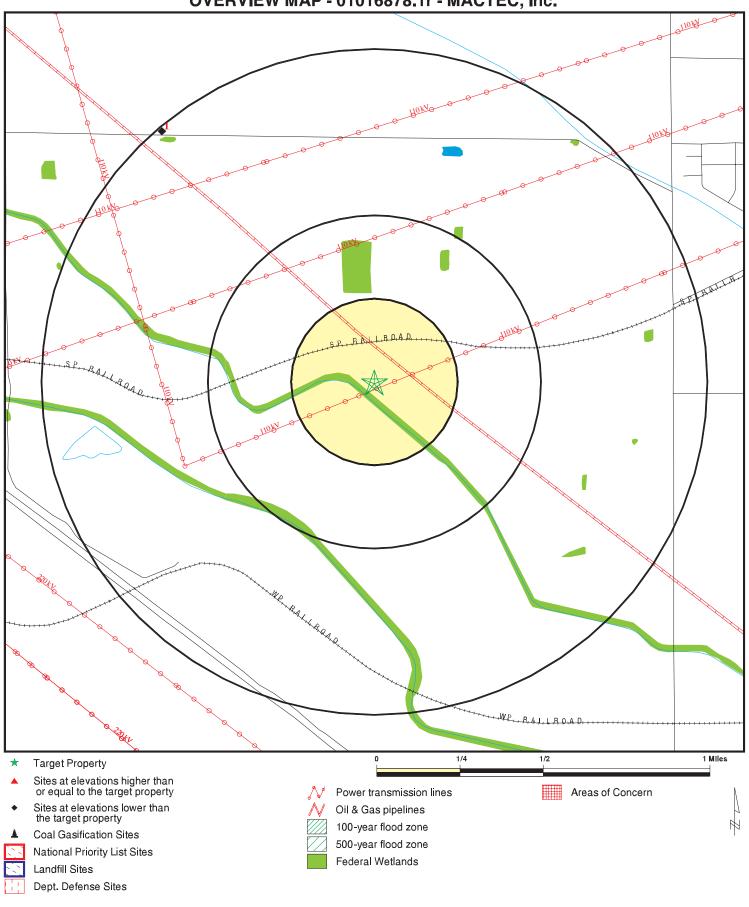

A review of the Cortese list, as provided by EDR, has revealed that there is 1 Cortese site within approximately 1 mile of the target property.

Design Flow: 0 Million Gal/Day Baseline Flow: 0 Million Gal/Day
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any

servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and

repairing, oil production, storage and disposal operations, water pumping.

Active - Any facility with a continuous or seasonal discharge that is under Waste

Discharge Requirements.

Agency Type: Private

Facility Status:

Waste Type: Domestic Sewage - Designated/Influent or Solid Wastes that pose a significant threat to

water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in

this category.

Cooling Water: Noncontact - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are

included in this category.

Threat to Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on

receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment

would include nuisance from a waste treatment facility.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment

system (except for septic systems with subsurface disposal), or any Class II or III

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement

of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/30/03 Date Made Active at EDR: 06/02/03

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its

fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

TRACY PEAKER PLANT 14950 WEST SCHULTE ROAD TRACY, CA 95377

TARGET PROPERTY COORDINATES

Latitude (North): 37.710999 - 37° 42' 39.6" Longitude (West): 121.492897 - 121° 29' 34.4"

Universal Tranverse Mercator: Zone 10 UTM X (Meters): 632844.1 UTM Y (Meters): 4174614.5

Elevation: 183 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

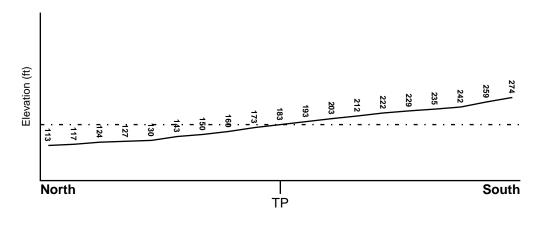

TARGET PROPERTY TOPOGRAPHY

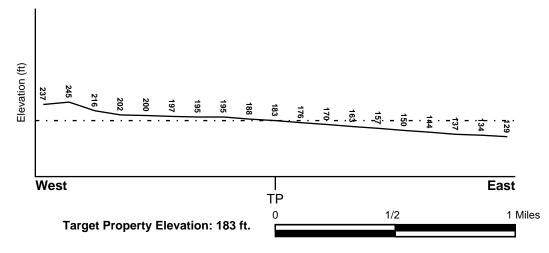

USGS Topographic Map: 2437121-F4 TRACY, CA

General Topographic Gradient: General NNE

Source: USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 The state of the

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Cenozoic Category: Stratifed Sequence

System: Quaternary Series: Quaternary

Code: Q (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: CAPAY

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic

conductivity, wet state high in the profile. Depth to water table is 3

to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information									
	Boundary			Classification					
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)		
1	0 inches	32 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 5.60		
2	32 inches	50 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60		
3	50 inches	62 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.60		

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand gravelly - loam

gravelly - loam gravelly - sandy loam

Surficial Soil Types: clay loam

gravelly - clay loam fine sandy loam

loam

extremely gravelly - sand

gravelly - loam gravelly - sandy loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: clay loam

gravelly - clay loam gravelly - loam stratified

indurated

extremely gravelly - sand

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS

1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2, 3, 5 and 6

Source: Department of Conservation

Telephone: 916-323-1779

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/31/2008 Source: EPA

Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/08/2008 Date Data Arrived at EDR: 04/25/2008 Date Made Active in Reports: 05/21/2008

Next Scheduled EDR Contact: 06/16/2008 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

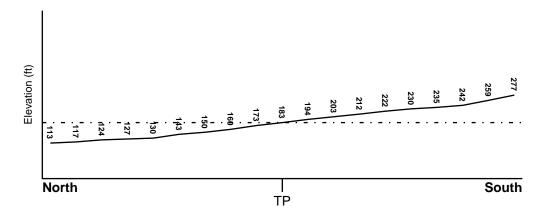

TOPOGRAPHIC INFORMATION

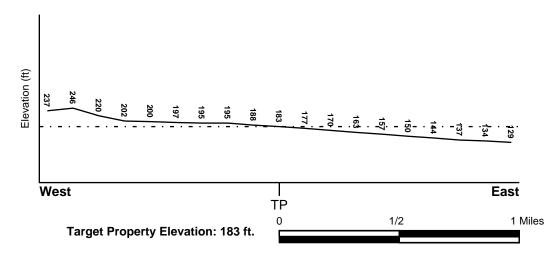

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 GROUNDWATER FLOW

^{*©1996} Site—specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: STOMAR

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)
1	0 inches	16 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
2	16 inches	46 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
3	46 inches	59 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: Capay

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)
1	0 inches	20 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
2	20 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6

Soil Map ID: 3

Soil Component Name: Water
Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

AREA RADON INFORMATION

Federal EPA Radon Zone for SAN JOAQUIN County: 3

Note: Zone 1 indoor average level > 4 pCi/L.

: Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.

: Zone 3 indoor average level < 2 pCi/L.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOWR Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after

August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Telephone: 916-323-1779

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208 Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
