Call Leader: Felicia Miller

TO: ALL INTERESTED PARTIES AND MEMBERS OF THE PUBLIC

This notice is to inform you that the California Energy Commission staff will hold an Issues Resolution Workshop via teleconference to discuss and clarify information regarding transmission system engineering, biology, water, and air quality following discussions at the Scheduling Conference held on Thursday, July 9, 2009 for the Palmdale Hybrid Power Project (PHPP). All interested agencies and members of the public are invited to participate. The workshop will be held on **Tuesday, July 28, 2009**, starting at **10:00 AM**.

Summary of the Proposed Palmdale Hybrid Power Project

The proposed PHPP would be a hybrid of natural gas fired combined cycle equipment with solar thermal equipment and would have a net electrical output of 617 megawatts (MW). The PHPP site is situated approximately 60 miles north of downtown Los Angeles and in the northernmost portion of the city of Palmdale. Should the project be approved by the Energy Commission, construction may begin in spring or summer of 2011 and commercial operation is planned by summer of 2013.

Energy Commission Licensing Authority

The Energy Commission is responsible for reviewing and ultimately approving or denying all applications for construction and operation of thermal electric power plants, 50 MW and greater, proposed for construction in California. The Energy Commission's facility certification process carefully examines public health and safety, environmental impacts and engineering aspects of proposed power plants, and all related facilities such as electric transmission lines and natural gas and water pipelines. The Energy Commission is the lead agency under the California Environmental Quality Act (CEQA), and because the siting process is a certified regulatory program, the Commission produces several environmental and decision documents rather than an Environmental Impact Report.
