The October 14, 2009 Data Response and Issues Resolution workshop will focus on Watson Cogeneration Company's September 28, 2009 data responses, additional data responses to be provided by October 28, 2009 and the resolution of related issues and concerns. Following the workshop, staff will consider the responses and comments it receives, submit a second round of data requests, if it deems necessary, and publish a

### **Summary of the Proposed BP Watson Project**

On March 19, 2009, Watson Cogeneration Company filed an Application for Certification with the Energy Commission for the addition of 85-megawatts (MWs) to the existing Watson Cogeneration facility within the confines of the BP Carson Refinery. The existing facility has four General Electric (GE) 7EA combustion turbine generators (CTG), four heat recovery steam generators (HRSG) and two steam turbine generators (STG). In operation since 1988, the existing cogeneration facility is owned by Watson Cogeneration Company and operated by BP West Coast Products, LLC – BP Carson Refinery. Watson is a joint partnership between subsidiaries of BP America and Edison Mission Energy. Since the project consists of adding a fifth CTG/HRSG to the existing configuration, it is also referred to as the “fifth train.” This fifth train would increase the existing capacity of the 385-megawatt (MW) Watson Cogeneration Facility by approximately 85 MW to a total output of 470 MW.

The project site is located within the boundary of the existing Watson Cogeneration Facility, which is a 21.7-acre area and is part of a larger parcel containing the BP Carson Refinery. The project site is located in the City of Carson, approximately 0.7 mile south of the 405 Freeway, roughly bounded by East 223rd Street to the north, Wilmington Avenue to the west, East Sepulveda Boulevard to the south, and South Alameda Street to the east. The Construction Laydown and Parking Area is a paved 25-acre parcel located approximately 1 mile southeast of the Project Site, and is located at 2149 East Sepulveda Boulevard.

### **California Energy Commission Licensing Authority**

The Energy Commission is responsible for reviewing and ultimately approving or denying all applications for construction and operation of thermal electric power plants, 50 MW and greater, proposed for construction in California. The Energy Commission's facility certification process carefully examines public health and safety, environmental impacts and engineering aspects of proposed power plants, and all related facilities such as electric transmission lines and natural gas and water pipelines. The Energy Commission is the lead agency under the California Environmental Quality Act (CEQA), and because the siting process is a certified regulatory program, the commission produces several environmental and decision documents rather than an Environmental Impact Report.

### **Public Resources, Contact Information and Additional Sources for Information**
