Docket Number: 11-AFC-03

End the Quail Brush nightmare please

Dear Commissioners,

Quail Brush would be a 100MW natural gas fired power plant. Natural gas combustion produces Greenhouse Gases (GHGs) along with other toxic air emissions. The process of procuring the natural gas fuel requires the emission of additional GHGs and the new drilling method called "hydraulic fracturing" or "fracking" releases large and un-quantified amounts of GHGs, permanently destroys groundwater supplies (when drill casings fail and allow escape into aquifers) and results in the industrialization of thousands of acres of public and private natural lands. Fracking could not meet the requirements of the Clean Air and Clean Water Acts and thus operates through exemptions authorized during the Bush Administration. Many experts have concluded that natural gas extraction and use is equivalent in its environmental damage to coal.

Thank you for your consideration,
Steven
