**Subject: RICE SOLAR ENERGY PROJECT,
DATA ADEQUACY RECOMMENDATION (09-AFC-10)**

On October 22, 2009, Rice Solar Energy, LLC filed an Application for Certification (AFC) to construct and operate the Rice Solar Energy Project (RSEP), proposed as a concentrating solar power (CSP) generation facility. On November 20, RSEP filed a Supplement to the AFC containing the additional information for review. The Energy Commission staff has completed their review of the supplemental information and has determined that the AFC does meet all the requirements listed in Title 20, section 1704, and Division 2, Chapter 5, Appendix B of the California Code of Regulations for the 12-month process.

The proposed project would have a central receiver tower and an integrated thermal storage system rated at a nominal generating capacity of 150 megawatts (MW). The RSEP is being developed to provide sustainable, renewable, cost-effective energy, with energy storage for operating flexibility that contributes to the achievement of the renewable portfolio standards. The proposed project does not have a power purchase agreement at this time. The RSEP's concentrating solar power technology consists of a large field of mirrors or heliostats that focus the sun's energy onto a central receiver positioned on top of a 653 foot tower. The project features thermal energy storage which allows solar energy to be captured throughout the day and retained in a liquid salt heat transfer fluid. When electricity is to be generated, the hot liquid salt is routed to a series of heat exchangers to produce steam. The steam is used to generate electricity in a conventional steam turbine cycle.

RSEP would use a dry-cooled system to significantly reduce water consumption, given the project's desert environment location. Water would be needed to replenish blowdown of boiler water, for proper chemistry control in the steam cycle and for washing of the heliostats. The project would require up to 235 gallons per minute (gpm) of groundwater to be drawn from two onsite wells. Each well would have sufficient capacity to supply water for the plant needs throughout the expected 30-year operational life of the plant. Groundwater would be put through a pre-treatment system and further purified for use as boiler makeup water and for pressure-washing of the heliostat field.

The proposed transmission line is a 10.0-mile generation tie-line that would connect with the existing Western Area Power Administration's (Western) 230 kV Parker-Blythe transmission line. The generation tie-line would be constructed partly on private land and partly on public land managed by the U.S. Bureau of Land Management (BLM), and would require construction of 4.6 miles of new unpaved access road and use of 5.4 miles of existing dirt roads. A new interconnection substation would also be required at the point of interconnection with Western's existing transmission line.

Construction of the project, from site preparation and grading to full commercial operation, is expected to take approximately 30 months. If approved, site construction activities would commence in the first quarter of 2011; it is currently anticipated that the project would be on line and in commercial service by the fourth quarter of 2013.

The proposed project is in a very sparsely settled portion of the Sonoran Desert, in an unincorporated area of eastern Riverside County, California, immediately south of State Route (SR) 62 about 1 mile east of the junction with Blythe-Midland Road. The nearest permanent settlement is Vidal Junction, approximately 15 miles northeast, at the junction of SR 62 and U.S. Route 95. The community of Blythe is 40 miles south via Blythe-Midland Road.

Attached is a summary table and the data adequacy worksheets for all technical disciplines. At the Energy Commission's business meeting on December 2, 2009, I will recommend Commission approval of the Executive Director's data adequacy recommendation and the appointment of a Siting Committee to oversee the RSEP. If you have any questions, please call Joseph Douglas, staff's Project Manager, at (916) 653-4677.

Appendix B (g) (4) (A)	A land use map which identifies residences, hospitals, libraries, schools, places of worship, or other facilities where quiet is an important attribute of the environment within the area impacted by the proposed project. The area potentially impacted by the proposed project is that area where, during either construction or operation, there is a potential increase of 5 dB(A) or more, over existing background levels.	§ 5.7.2.1	Yes	
Appendix B (g) (4) (B)	A description of the ambient noise levels at those sites identified under subsection (g)(4)(A) which the applicant believes provide a representative characterization of the ambient noise levels in the project vicinity, and a discussion of the general atmospheric conditions, including temperature, humidity, and the presence of wind and rain at the time of the measurements. The existing noise levels shall be determined by taking noise measurements for a minimum of 25 consecutive hours at a minimum of one site. Other sites may be monitored for a lesser duration at the applicant's discretion, preferably during the same 25-hour period. The results of the noise level measurements shall be reported as hourly averages in Leq (equivalent sound or noise level), Ldn (day-night sound or noise level) or CNEL (Community Noise Equivalent Level) in units of dB(A). The L10, L50, and L90 values (noise levels exceeded 10 percent, 50 percent, and 90 percent of the time, respectively) shall also be reported in units of dB(A).	§ 5.7.2.2	Yes

Appendix B (g) (1)	...provide a discussion of the existing site conditions, the expected direct, indirect and cumulative impacts due to the construction, operation and maintenance of the project, the measures proposed to mitigate adverse environmental impacts of the project, the effectiveness of the proposed measures, and any monitoring plans proposed to verify the effectiveness of the mitigation.	Section 5.1, pages 5.1-1, and 5.1-23 through 5.1-28. Section 5.9, page 5.9-1.	Yes	
Appendix B (g) (9) (A)	An assessment of the potential risk to human health from the project's hazardous air emissions using the Air Resources Board Hotspots Analysis and Reporting Program (HARP) (HSC §§44360-44366) or its successor and Approved Risk Assessment Health Values. These values should include the cancer potency values and noncancer reference exposure levels approved by the Office of Environmental Health Hazard Assessment (OEHHA Guidelines, Cal-EPA 2005).	Section 5.9, pages 5.9-2 through 5.9-9.	Yes	
Appendix B (g) (9) (B)	A listing of the input data and output results, in both electronic and print formats, used to prepare the HARP health risk assessment.	Section 5.9, page 5.9-2, and Appendices 5.1-A and 5.1-C.	Yes	
Appendix B (g) (9) (C)	Identification of available health studies through the local public health department concerning the potentially affected population(s) within a six-mile radius of the proposed power plant site related to respiratory illnesses, cancers or related diseases.	Section 5.9, page 5.9-1.	Yes	
Appendix B (g) (9) (D)	A map showing sensitive receptors within the area exposed to the substances identified in subsection (g)(9)(A).	Section 5.5, Figure 5.5-1	Yes	
Appendix B (g) (9) (E)	For purposes of this section, the following definitions apply:			
Appendix B (g) (9) (E) (i)	A sensitive receptor refers to infants and children, the elderly, and the chronically ill, and any other member of the general population who is more susceptible to the effects of the exposure than the population at large;	Section 5.9, page 5.9-3 through 5.9-9.	Yes
