Subject: ABENGOA MOJAVE SOLAR, DATA ADEQUACY RECOMMENDATION (09-AFC-5)

On August 10, 2009, Mojave Solar LLC filed an Application for Certification (AFC) to construct and operate the Abengoa Mojave Solar (AMS) project, proposed as a solar electric generating facility on approximately 1,765 acres. The project would have a combined nominal electrical output of 250 megawatts (MW) from twin, independently-operable solar fields, each feeding a 125-MW power island. The twin solar fields would be 884 acres and 800 acres, respectively, and joined at a transmission line interconnection substation to form one full-output transmission interconnection.

The proposed project site is located approximately nine miles northwest of the Town of Hinkley in unincorporated San Bernardino County, approximately halfway between the City of Barstow and Kramer Junction (Highway 395 / Highway 58 junction). The existing Solar Electric Generating Stations VIII and IX facilities are located immediately northwest of the project site. The project site is comprised of private property that was historically used as the Lockhart Ranch complex.

The project would utilize solar parabolic trough technology to activate a heat transfer fluid. This heat transfer fluid provides a high-temperature energy source which is used to generate steam in solar steam generators. As this steam expands through the steam turbine generators, electrical power is generated. The AMS project proposes to use approximately 1080 acre feet of groundwater per year for wet cooling towers and owns adjudicated water rights to the Harper Valley Groundwater Basin for this purpose. Water will be provided from groundwater wells and no pipelines are proposed. Abengoa is presenting data indicating that the groundwater is brackish with high levels of totally dissolved solids (TDS). Staff will be evaluating the water quality data during the discovery phase of the project licensing process.

The project will include four – 5-acre evaporation ponds for industrial wastewater. The ponds will be lined to contain any deposits from the cooling and water treatment processes. A sanitary septic system and onsite leach field will be located on-site to dispose of sanitary wastewater on each power island.

The AMS project is proposing to connect to Southern California Edison Company's Kramer-Cool Water 230-kV transmission line which is located adjacent to the southern border of the proposed project site. All AMS project-related transmission facilities would be within the project boundaries except the connection within the existing transmission right-of-way adjacent to the site.

If approved, construction of the generating facility is expected to take place from the third quarter of 2010 to the third quarter of 2012 (24 months total). If approved, the applicant anticipates that the project would be on line and in commercial service by the fourth quarter of 2012.

The Energy Commission staff has completed its data adequacy review of the AFC and has determined that it does not meet all the requirements listed in Title 20, section 1704, and Division 2, Chapter 5, Appendix B of the California Code of Regulations for the 12-month process. Of the 21 technical disciplines reviewed, we believe the information contained in the AFC is deficient in nine (9) areas for the 12-month permitting process which are: air quality, biological resources, land use, project overview, public health, soils, transmission system design, visual resources and water resources.

Attached is a summary table and the data adequacy worksheets for all technical disciplines. The worksheets for the aforementioned sections identify the additional information that staff believe is necessary to fulfill the AFC data adequacy requirements. At the Energy Commission's business meeting on September 23, 2009, I will recommend that the Energy Commission adopt the list of deficiencies and not accept the AFC as complete until the additional information specified in the data adequacy worksheets is supplied. If you have any questions, please call Craig Hoffman, staff's Project Manager, at (916) 654-4781.

SITING REGULATIONS	INFORMATION	AFC PAGE NUMBER AND SECTION NUMBER	ADEQUATE YES OR NO	INFORMATION REQUIRED TO MAKE AFC CONFORM WITH REGULATIONS
Appendix B (g) (13) (E)	Impacts discussion of the following:	--	--	
Appendix B (g) (13) (E) (i)	all impacts (direct, indirect, and cumulative) to biological resources from project site preparation, construction activities, plant operation, maintenance, and closure. Discussion shall also address sensitive species habitat impacts from cooling tower drift and air emissions;	Bio resource impacts: Section 5.3.6 Section 5.3.7 Air quality impacts: Section 5.2.4.10	Yes Yes	
Appendix B (g) (13) (E) (ii)	facilities that propose to take water directly from, and/or discharge water to surface water features, daytime and nighttime impacts from the intake and discharge of water during operation, water velocity at the intake screen, the intake field of influence, impingement, entrainment, and thermal discharge. Provide a discussion of the extent of the thermal plume, effluent chemicals, oxygen saturation, intake pump operations, and the volume and rate of cooling water flow at the intake and discharge location; and	N/A	N/A	
Appendix B (g) (13) (E) (iii)	Methods to control biofouling and chemical concentrations, and temperatures that are currently being discharged or will be discharged to receiving waters.	N/A	N/A	
Appendix B (g) (13) (F)	A discussion of all feasible mitigation measures including, but not limited to the following:	----		
Appendix B (g) (13) (F) (i)	All measures proposed to avoid and/or reduce adverse impacts to biological resources;	Section 5.3.8	Yes
