**NOISE AND WATER SAMPLING RESPONSES TO JANUARY 10, 1994 DATA
RESPONSE WORKSHOP FOR PROCTER AND GAMBLE COGENERATION PROJECT
(DOCKET NO. 93-AFC-2)**

Dear Mr. Blevins:

Please find enclosed 12 copies of the responses to the noise questions asked by CEC staff at the January 10, 1994 Data Response Workshop for the Procter and Gamble Cogeneration Project and of the analysis of the water sampling conducted for the project. If you have any questions regarding this information please telephone me at 916-732-6540.

With Regards,

Diana Parker
Environmental Specialist

Procter & Gamble Cogeneration Project Docket No. 93-AFC-2
January 24, 1994

Noise A. At the January 10, 1994 Data Response Workshop CEC staff requested a review of the City's Noise Ordinance to confirm that it coincided with the County's Noise Ordinance.

SCA Response. The adopted Noise Element of the City of Sacramento General Plan, dated January 19, 1988, identifies noise level standards for land uses. If the noise source is due to vehicular traffic or a fixed source, the maximum acceptable interior noise level for residences is Ldn 45dB and the maximum acceptable exterior noise level for residences is Ldn 60dB in the backyards. The City of Sacramento Noise Control Ordinance identifies acceptable noise standards for agricultural and residential properties. The established exterior noise limits are 50dBA during the nighttime hours of 10:00 p.m. through 7:00 a.m. The established exterior noise limits are 55dBA during the daylight hours of 7:00 a.m. through 10:00 p.m. Construction is exempt from the City of Sacramento Noise Control Ordinance except between the hours of 6:00 p.m. and 7:00 a.m. on Monday through Saturday and 6:00 p.m. to 9:00 a.m. on Sunday.

The noise analysis in the Procter and Gamble AFC was based on the more restrictive noise standards of the County of Sacramento revised Draft Element of the General Plan. The AFC analysis, which is still applicable, concludes that the worst-case average noise level during the construction phase is estimated to be approximately 55 dBA at the nearest residences. Combined with the Leq(24) value of 65.0 dBA at this location, the cumulative noise impact is approximately 65 dBA. Operation of the facility will produce an overall noise emission level of approximately 45 dBA [leq(24)] at the nearest residential area. This will meet the 45 dBA nighttime requirement at the nearest residence. The existing Leq(24) level outside of these residences was measured to be 65.0 dBA. The operation of the cogeneration project is not expected to be noticeable over the existing community noise.

The AFC cumulative analysis, which is still applicable, concludes that the construction noise may be audible at the quietest-times of the day but should not cause a significant increase in the ambient noise levels at most times. The impact at the nearest residences during the loudest phase of construction is expected to be approximately 55 dBA while the existing Leq(24) value is 65 dBA. The combined impact is 65.4 dBA, an inaudible increase. Section 6.10.4.1 of the AFC states that construction activities are scheduled to occur between 7:00 a.m. and 6:00 p.m. to the fullest extent possible. This timeframe is consistent with the allowable hours specified in the City of Sacramento Noise Control Ordinance.

Procter and Gamble Cogeneration Project Docket No. 93-AFC-2
January 24, 1994
Noise p.2

The AFC analysis of operational noise impacts states that with the mitigation measures applied the cogeneration facility is expected to emit 45 dBA at the nearest residence; this level will not cause an increase in the existing Leq(24) at this location.

Noise B. At the January 10, 1994 Data Response Workshop CEC staff asked if the office use located across the railroad tracks from the project site would change the AFC analysis.

SCA Response. The office use is located in the Light Industrial (M-1) zone. Per the City of Sacramento Zoning Ordinance, office uses are an allowed use in the Light Industrial M-1 zone. The adopted Noise Element of the City of Sacramento General Plan identifies the community noise exposure range of 50 dB to 65 dB as normally acceptable for office buildings. The City of Sacramento Noise Control Ordinance does not identify a standard for office uses.

The office use is located near Noise Monitoring Location 1 in the AFC which identifies an Leq(24) of 61 dBA. The worst case analysis (construction) discussed in the response to Noise A. above indicates that the cumulative noise impact is approximately 65 dBA. Since 65 dBA is within the normally acceptable exposure range for office uses, the impact of construction will not be significant. Because operation noise levels will be lower than construction noise levels, the impact of operation will not be significant.

SACRAMENTO MUNICIPAL UTILITY DISTRICT

OFFICE MEMORANDUM

TO: John Larsen, Project Manager

DATE: December 7, 1993
SCA 93-073

FROM: Lonn Maier, Environmental Specialist *(initials)*

SUBJECT: WATER SAMPLING FOR THE PROCTER AND GAMBLE COGENERATION FACILITY

On November 10, 1993, water samples were taken from a number of sources at and around the Procter and Gamble facility to determine constituent levels of water usage for the proposed Procter and Gamble Cogeneration Project. The laboratory analyses of the samples was performed by Twining Laboratories in Fresno, California.

As noted on the attached map, samples were taken at the following locations:

<u>Site #</u>	<u>Description</u>
1	Procter and Gamble city water
2	Procter and Gamble HFA water
3	Discharge creek on south side of Fruitridge Road
4	Confluence of discharge creek and Morrison Creek
5	Discharge creek, 50' upstream of confluence with Morrison Creek
6	Morrison Creek, 50' upstream of confluence with discharge creek
7	Morrison Creek, 50' downstream of confluence with discharge creek
8	City water supply (street fire hydrant).

Samples were taken in accordance with guidelines in the Environmental Protection Agency (EPA) Handbook Stream Sampling for Waste Load Allocation Applications (EPA/625/6-86/013).

Stream characteristics of the discharge ditch at the time of sampling are flow = .23 cubic feet per second (cfs) and temperature (T) ≈ 85° at site #3; flow = .23 cfs and T ≈ 75° at site #5. Stream characteristics at site 6 of Morrison Creek are flow = 0 cfs and T ≈ 60°; at site 7 of Morrison Creek, flow = .25 cfs and T ≈ 70°.

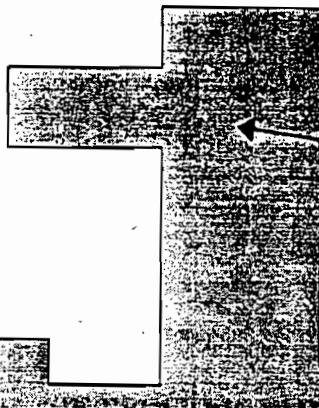

The analyses performed was done according to EPA test methods for drinking water standards. For each analysis done, the lowest detection level possible was used. Dissolved oxygen and trace asbestos were not included in the analyses.

PROJECT : Procter & Gamble Cogen
PROJECT MGR : John Larsen

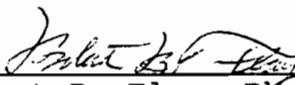

The Twining Laboratories is accredited by the State of California Department of Health Services for the analysis of Drinking Water, Wastewater and Hazardous Waste under Certificate No. 1371.

In accordance with your instructions, the samples submitted were analyzed for the components specified. The analytical results are enclosed on the following pages. The following comments apply to this project:

As discussed with Diane Parker on December 17, 1993, the Bromodichloromethane results for samples 693-6345.1 and 693-6345.8 were transcribed as Dibromochloromethane in the original report. This error has been corrected in this amended report.

Please contact us if you have any questions concerning the analyses or results. Thank you for letting us serve you.

TWINING
 LABORATORIES, INC.
 EST. 1898
 ANALYTICAL CHEMISTRY • ENVIRONMENTAL SERVICES
 GEOTECHNICAL ENGINEERING • DRILLING SERVICES
 CONSTRUCTION INSPECTION & MATERIALS TESTING

REPORT DATE : December 17, 1993 INVOICE #12199
 LABORATORY ID: 693-6345.8 **AMENDED REPORT** PAGE 48 of 48

DATE SAMPLED : 11-10-93 at 1400 by L. Maier
 DATE RECEIVED: 11-11-93 at 1040 from L. Maier

ATTENTION : Lonn Maier
 CLIENT SMUD/Projects Development
 P.O. Box 15830; MS 37
 Sacramento, CA 95852-1830

PROJECT : Procter & Gamble Cogen
 PROJECT MGR : John Larsen

ANALYZED BY : J. Yano, T. Geringer, K. Furlow, J. Scianna, J. Strutzel
 REVIEWED BY : J. Strutzel

DATE PREPARED: 11-11-93 through 11-30-93

DATE ANALYZED: 11-11-93 through 11-30-93 SAMPLE TYPE: Drinking Water

CLIENT SAMPLE ID: PG-8

METALS SCAN	RESULTS (mg/L)	DLR (mg/L)	METHOD
Antimony (Sb)	ND	0.005	204.2
Arsenic (As)	0.0006	0.0005	206.3
Beryllium (Be)	ND	0.001	200.7
Cadmium (Cd)	ND	0.0005	213.2
Chromium (Cr)	ND	0.001	218.2
Copper (Cu)	0.004	0.001	220.2
Lead (Pb)	ND	0.002	239.2
Mercury (Hg)	ND	0.0002	245.1
Nickel (Ni)	ND	0.05	200.7
Selenium (Se)	ND	0.0005	270.3
Silver (Ag)	ND	0.01	272.1
Thallium (Tl)	ND	0.005	279.2
Zinc (Zn)	ND	0.05	200.7
Cyanide (CN)	ND	0.02	335.2
Hexavalent Chromium (Cr VI)	ND	0.02	7196
Total Dissolved Solids (TDS)	36	10	160.1

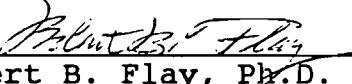

CALIFORNIA DEPARTMENT OF HEALTH SERVICES CERTIFICATE NO. 1371

mg/L : milligrams per Liter (parts per million)

DLR: Detection Limit for Reporting purposes

ND : None Detected
