Subject: RE: HECA from Chris Romanini

Good Morning Chris,

As we discussed, I am inquiring regarding the recording of the workshop, and will see that it is posted if it was successfully done. Please send the text if the "Concerns" petition to Blake Roberts, PAO, and I gave you my fax number for sending the signatures, I will insure that these get to Blake for attachment to the related "concerns" letter.

Also, in our conversation you again touched on the air quality issue of monitoring, particularly in the Tupman-Buttonwillow area, stating that local placement of monitoring equipment would be health-protective, particularly for young children at local schools and play areas. You also disagree with the Air District and our staff regarding the proper location of air monitoring equipment. You restated your concern with releases from the HECA project that could have a negative effect on crops-particularly the food crops (nut trees, grapes, cherries) in the vicinity.

Regarding water, you reiterated that most crops are now using drip/micro-irrigation techniques the insure saturation to the base of the root zone at which time the irrigation is stopped.

Please, correct me if I misstated anything from our conversation, or missed something you feel important.

Regards,

Bob Worl

We are awaiting the information from the Workshop on water Feb 20 in Sac. Since we had to leave by 4:30 to catch our train, that part we missed entirely. Could you please docket the transcripts and/or the recording of that work shop?

Thank you

Chris Romanini

Also, Nearly 150 neighborhood people signed our "concerns" letter to the Kern County Board of Supervisors this past Tuesday, Feb 26. I can email you that presentation letter, but I also have sheets of signatures that I would also like you to Docket. Should I fax those signatures to you? Thanks.....
