Jumpstarting building electrification

Every measure from every sector must work to move California away from methane and transition toward zero-emission homes and businesses. This will improve air quality, reduce health impacts of disadvantaged communities, and promote a greater chance for achieving climate change goal.

The Commission must prioritize building decarbonization and identify more strategies that will jumpstart electrification. It's clear that electrifying over 13 million homes and buildings across the state will require organization and leadership in order for the IEPR to prompt a successful transition toward zero-emission buildings.
