## **Getting California new buildings off natural gas**

Gas is polluting and it's dangerous. We need to get it out of our energy system, and especially out of our homes and buildings. The gas industry doesn't want Californians to choose clean energy alternatives. They're pushing back on the IEPR chapter, and claiming that Californians want gas instead of clean energy in their homes and businesses. California cannot afford another San Bruno or Aliso Canyon disaster.

I'm not being a shill for electric utilities like SoCal Edison. More research is needed on ways to heat homes and operate kitchen appliance with alternate fuels.

The transition off gas to cleaner buildings is essential not just for the climate, but for the safety and health of our communities.
