## **Building electrification**

Given the recent passage of SB-100, a clear next step in making our air cleaner and reducing the carbon we put into it is to electrify our homes and businesses to the greatest extent possible. I'd like to see the Commission find ways to do that and help lead the way to a future where all buildings are zero-emission. Not only will this make for cleaner air and help fight the climate crisis, it will help prevent another disaster like Aliso Canyon. There's no need for storing enormous quantities of natural gas if there's no need for natural gas.

Thanks for helping to clean up California's future.
