## **Wise Energy**

There is but one way California can continue to lead the country in energy use: transition off of gas and fossil fuels and embrace the solar and wind energy so easily available. With solar panels easy to attach to rooftops, providing each home energy, this would seem the wisest use of resources and budgets for both new and existing homes. In fact, there is no valid reason not to transition all homes and business, where at all possible, to solar panels on rooftops. Please be leaders and use what nature's so providentially provided in solar and wind power.
