Push for electrifying buildings

California must move away from methane and transition toward zero-emission homes and businesses. This will improve air quality and safety in our communities.

I just got an induction range and am astonished how much better it is than old electric ranges or even my gas range I loved.

I urge the Commission to prioritize building decarbonization and identify more strategies that will jumpstart electrification.

It's clear that electrifying over 13 million homes and buildings across the state will take all hands on deck. The IEPR should help prompt a successful transition toward zero-emission buildings. □
