Time to jumpstart building electrification

It has become imperative to improve air quality and safety in all of California's communities by phasing out methane (that is "harvested" by destructive fracking) and accelerating the transition toward zero-emission homes and businesses.

I urge the Commission to prioritize building decarbonization and jumpstart electrification by implementing the strategies outlined in the Building Decarbonization chapter of your Integrated Energy Policy Report. Of course, the gas industry doesn't want Californians to choose clean energy alternatives, so electrification of over 13 million homes and buildings across the state is a major undertaking. However, the Integrated Energy Policy Report can facilitate a successful transition toward zero-emission buildings.
