2018_10_31 Questions about ocean algae, lighting, seaweed farming at offshore wind turbines

I asked in the chat box during the WebEX broadcast of the CEC Staff Workshop Next Generation Wind Energy Technology lectures if there have been studies on ocean algae at offshore wind facilities which are already established and if proper lighting is considered so that algae and other sea life is not disturbed. I am guessing that most sea plant life adapts once the offshore turbines are in place, but it would be nice to know that. The California coastline is abundant with seaweed plants. Also, it seems that seaweed farming might be worth considering more off the California coast. I hope that those that plan offshore wind turbines are prepared for such ideas.
