building decarbonization

California must move away from methane and transition toward zero-emission homes and businesses. The recently release IPCC Special Report describes how urgently we need to achieve zero emissions. The CEC should prioritize building decarbonization and identify more strategies that will achieve electrification on an accelerated time scale. California cannot afford another San Bruno or Aliso Canyon disaster. The transition off gas to clean electric buildings is essential not just for the climate, but also for public health and safety. I support the IEPR, which should help prompt a successful transition toward zero-emission buildings.
