## **Clean Energy Buildings**

Homes and buildings are one of the largest sources of climate pollution in California. In fact, the fracked gas that powers our water heaters, furnaces, clothes dryers and stoves not only harms the climate, but poses major safety, air quality, and health risks to our families and communities.

Please support the Building Decarbonization chapter of the Energy Commission's Integrated Energy Policy Report (IEPR). Please direct utilities to transition homes and businesses off gas. Gas is polluting and it's dangerous. We need to get it out of our energy system, and especially out of our homes and buildings. California cannot afford another San Bruno or Aliso Canyon disaster. The transition off gas to clean electric buildings is essential not just for the climate, but for the safety and health of our communities.

I strongly support clean energy buildings.

Victoria Maxson
