We need to phase out natural gas and all other fossil fuels

I support the effort to convert our homes to operate on renewable energy. But the process must take place in the correct order. Replacing natural gas with electricity generated by natural gas power plants will accomplish nothing. We need to: (1) convert all power generation to renewable fuels, (2) reduce the cost of electricity to below the current cost of natural gas, and (3) provide subsidies for homeowners and landlords to make the conversion. Today, all-electric homes cost four times as much to operate as homes using natural gas. That cost discrepancy must be eliminated before the conversion is forced on Californians who can't afford the expense.
