**Mr.**

The threat of climate chaos which we are only beginning to see through extreme weather, floods, forest fires, destruction of insects and other species, and ecological systems is interacting to destroy life as we know it. We are looking at the next great extinction and it is humanly caused. One thing we must do is divest from fossil fuels. Natural gas as the fracking process of extraction emits huge amounts of methane into the atmosphere, which scientists know creates 85 times the damage as CO<sub>2</sub> and is most hazardous the first ten years. Then the burning of the gas emits more CO<sub>2</sub>. All this adds to the rising temperature of the earth. We must get real and do everything possible to preserve life on this planet.
