## **California needs Nuclear for climate**

With nuclear energy as part of California's energy mix, we can take meaningful action on climate, reduce our energy-related land usage, keep prices low, and provide stable and reliable electricity for all Californians. Start by keeping Diablo Canyon open. Our state's largest single source of electricity, Diablo Canyon could provide abundant clean energy for decades into the future if California's policies would remove unneeded burdens and support continued operation. Additionally, we should encourage new nuclear technologies to be innovated and built here in California.
