## **Need for fossil-free energy**

We need to do absolutely everything we can to move people to Solar, wind and other renewable energy sources this year. This is a real emergency and we need to start acting that way now. Every homeowner should be given an incentive to install solar, or wind as soon as possible. 1) A \$5000 tax deduction would a great first step. 2) Lift restrictions on Solar panels, and small windmills is a must. 3) All excess energy generated by home systems must be feed back into the grid, and the homeowner must get reimbursed for it at the same electric rate as they buy it for. 4) All parking lots should be covered with solar systems and the energy feed to the closest business at no cost. 5) Provide an additional tax incentive to all to install a battery backup system in the home or small business. 6) Ensure that all components of these systems are made in California if practical.
