Smart Energy Buildings

Adopt policies that facilitate the transition from self-destructive fossil fuel dependence to high efficiency and renewable sources. While NG/LP has a lower environmental impact than coal and oil, their EI is significantly higher than " " of electricity and heat. The cost/GW of renewables, already lower than the cost of fossil energy, is falling. Renewables have a lower risk of hazardous accidents than fossil sources. This transition will grow new jobs in all states. It will help us achieve the objectives of SB100 and the Clean Power Plan.
