Transition from fossil fuels to renewable energy with all deliberate speed!

I hope California will be a world leader in transitioning from "greenhouse gas"-polluting fossil fuels to non-polluting renewable energy. I've already started to do my part by installing solar electric panels and driving a battery electric car. My electricity bill has been slashed by 75%, and the electricity I do use from Glendale Water & Power is close to 2/3 renewable due to good decisions made by the utility! I don't buy gasoline for my car, so there's no pollution---greenhouse or smog. My next projects are a solar water heater, solar pool heater, and an electric heat pump (to replace my gas space heater). Please encourage and facilitate all Californians to take steps like these, so we can minimize greenhouse gases!
