Keep Diablo Canyon

Please keep Diablo Canyon running. It provides clean, reliable, dispatchable electricity in volume with no CO2 at a low cost. Shutting it down to make room on the grid for solar - which only operates 25% of the time and backed up by gas (75% of the time) is a very poor idea both ecologically and economically.

California is already an expensive place to live. Please don't add to that cost and make our grid less reliable to boot.
