Electrification is the path to CA net zero emissions

The Final 2018 IEPR Update is OK as it stands. No changes should be made. We need to get rid of climate-destroying methane gas in all buildings as fast as possible. This is to meet stipulations of Executive Order B-18-55 for CA net-zero GHG emissions by 2045 and negative emissions after that. You should be assisting disadvantaged people to make the transition with well-insulated, high efficiency heat pumps first.

And please don't fall for phony "renewable natural gas" arguments. RNG is a valuable and limited commodity that absolutely must be conserved for use in only certain industrial processes and heat-recovery fuel cells.
