Docket Number: 18-IEPR-01

Move California toward renewable solar/wind electric power

California MUST move toward broader electrification of our power sources, be that hydroelectric, solar, or wind generation. ALL fossil fuel sources continue to contribute to greenhouse gas emissions that speed climate change, which is already upon us! Sea level changes, polar ice and glacier melting are increasing at exponential rates, as we are discovering that as ice begins to melt faster, the internal rivers of melted water erode polar ice faster and faster, so that glaciers are retreating at unprecedented rates. DO NOT enable fossil fuel GAS producers to prolong the transition to NON-CARBON energy sources. Natural Gas IS A FOSSIL FUEL--KEEP IT IN THE GROUND! We must drastically cut back on carbon emissions; PLEASE HELP ACCOMPLISH THAT!
