## **Prevent Climate Change**

If California is serious about addressing climate change we would be extremely foolish to close one of California's largest supplier of clean energy. You cannot ignore the fact that natural gas, not renewable, will replace a large portion of the loss of this clean energy source. We do not have the luxury of cherry picking which clean energy solution we want to employ. We need to use all available technologies to avoid disaster. Let's not make the same mistake of shutting down nuclear in favor of fossil fuels which caused climate change in the first place.
