Keep Diablo Canyon for Clean Air

I lived in California for about thirty years. It was a great place to live---except for air quality. It's not just the LA basin that has smog! Los Angeles, the Bay Area, Sacramento, basically the whole state has smog. Nitrogen oxides are a major cause for smog, and nitrogen oxides are produced by gas turbines.

If California wants to have clean air (and low carbon emissions), you must not let Diablo Canyon shut down! Keep it running! In Vermont, after Vermont Yankee closed, local gas turbines ran more and replaced Vermont Yankee power, while adding 3% more carbon to the output of the New England grid, and adding more smog to the area. Don't let this happen in California! Keep your low-emission plant running!
