Love your Fianl 2018 Integrated Energy Report Update

The California Energy Commission's Final 2018 Integrated Energy Policy Report Update is excellent.

I am very pleased that there is such a strong focus on the electrification of buildings, and agree that electrification is the most viable path to zero-emission buildings when combined with a grid that brings us increasingly more solar and wind as is going to happen very fast now.

I urge the Commission to pursue the electrification goals in the IEPR in a manner that expediently accelerates the electrification market while prioritizing California's most vulnerable and disadvantaged communities. It is important to help most those who are hurt first and most by carbon pollution.

I see no reason for any changes in the Final 2018 IEPR Update even if Gas companies want you to. We are in a climate emergency and natural gas is a huge driver of climate breakdown and environmental damage across the country. While I am speaking from myself here. You can rest assured that 350 Bay Area (and really all 350 groups in California) are strongly supportive of what I just said.

Sincerely,

Ken Jones
