## **AES Power Plant**

AES has a business plan in mind to make billions of dollars over the lifetime of this new proposed power plant.

Do they realize that this is 2013?

While everyone needs power, everyone does not need this type of power and the pollution that goes with it-- air pollution, noise pollution, and visual pollution.

Follow the example of Los Angeles Department of Water and Power. They have completed two solar farms, one wind farm and are in the works for two more solar projects. One upcoming solar project is located in the southern Owens dry lake area and the second is just north of Mojave. These two additional power sources will provide power to a city of 6 million. Surely a small time city like Redondo Beach can do better than this.

It's ridiculous to think that we need this type of unsightly structure along our cities' coastline.

Lou Burke

Redondo Beach.
